

CONTENTS

Introduction	1
A. The new edition	1
B. The pure food law	2
C. Compendia of methods	5
I. Product control and sanitation	7
II. Sources and types of contamination	11
A. General principles	11
B. Sanitation programs	11
C. Insects and related arthropods	17
D. Rodents and other animals	22
E. Miscellaneous particles	27
III. Principles of isolation and detection of food and drug contaminants	29
A. General discussion and historical introduction	29
B. Direct methods of examination	30
C. Isolation methods for microscopic detection	46
IV. Microscopes, microscope techniques, photomicrography, and preparation of exhibits	55
A. The compound microscope	55
B. The widefield stereoscopic microscope and its use	60
C. Care of the microscope	61
D. Photography	61
E. Preparation of exhibits	68
V. Fungi associated with food decomposition	73
A. General background	73
B. Taxonomic characteristics of the fungi	76
C. Molds affecting foods	80
D. The Howard mold count method	87
VI. The application of entomology to food and drug analysis	93
A. Basic food and drug entomology	93
B. Host-insect relationships	129
C. Insect fragments in foods and drugs	167
VII. Parasites and related forms	177
A. Introduction	177
B. Protozoa	177
C. Flatworms, platyhelminthes	181
D. Roundworms, nemahelminthes	183
VIII. Rodent and other animal filth in foods and drugs	187
A. Introduction	187

B. Pellets	187
C. Rodent pellet fragments	188
E. Hairs	190
F. Hair digestion	204
G. Urine	206
H. Bird and bat contamination	207
IX. Applied histology of food and drug materials	209
A. Introduction	209
B. Plant cells and tissues	209
C. Morphology of plant organs	213
D. Morphology of animal organs	217
E. Practical identification techniques	217
X. Microscopic crystallographic method and chemical microscopy	221
A. Introduction	221
B. Basic principles	221
C. The optical crystallographic technique	227
D. Microscopic examination with the polarizing microscope	231
E. Fundamental crystal symmetry and optical properties	238
F. Applications of microscopic-crystallographic procedures	240
G. Chemical microscopy as an analytical tool	247
XI. Identification of drug tablets and capsules	253
