

## CONTENTS

Overview	
The impact of rice production on vector-borne disease problems in developing Countries	7
Tropical rice agroecosystems: characteristics, distribution, and future trends	13
The epidemiology of ricefield-associated diseases	29
Impact of engineering, agronomy, and water management practices on disease vectors	
Planning, design and operation of rice irrigation schemes-their impact on mosquito-borne Diseases	41
Planning, design, and operation of rice irrigation schemes: the impact on schistosomiasis	51
The impact of water management practices in rice on mosquito vector propagation	67
Malaria vectors associated with rice culture in Southeast Asia and the Western Pacific	85
Vector-borne diseases associated with rice cultivation and their control in Southeast Asia	93
Water management in rice cultivation and its relation to mosquito production in Japan	101
Environmental management for the control of ricefield-breeding mosquitoes in China	111
Strategies for vector-borne disease control	
Malaria and rice: strategies for control	123
Control of schistosomiasis: research aspects	133
Schistosomiasis in the context of rice production systems in developing countries	143
Strategies for control of Japanese encephalitis in rice production systems in developing countries	153
Countries: arboviruses other than Japanese encephalitis	161
Ecology of rodents associated with ricefields: implications for public health	173
Integrated vector control strategies	
Integrated mosquito vector control in large-scale rice production systems	185
Integrated mosquito control in small-scale rice production systems	197
Control of <i>Schistosoma japonicum</i> snail intermediate host in riceland agroecosystems	203
A malaria epidemic caused by <i>Anopheles ludlowi</i> in East Java in 1933	217
Proposed curriculum on disease vector management in water resources development projects	225
Participants	235
