

CONTENTS.

CHAPTER I.

THE DEVELOPMENT OF OUR KNOWLEDGE OF DISINFECTION AND STERILIZATION.

The Antiquity of Disease	16
The Earliest Disinfection	17
The Nineteenth Century Awakening	18
The Empirical Development of Antiseptic and Aseptic Surgery	19
The Development of the Germ Theory of Disease	25
The Development of Words Used to Describe Disinfection	27

CHAPTER II.

NATURAL AGENCIES WHICH CONTROL MICROBIAL POPULATIONS.

Sunlight	32
Dilution	38
Natural Filtration	40
Sedimentation	40
Time	41
Evaporation and Condensation	43
The Bacteriophage	43
Antibiosis	48

CHAPTER III.

THE GERMICIDAL PROPERTIES OF THE BODY. ITS FLUIDS AND SECRETIONS.

Blood	56
Amniotic Fluid	50
Lysozyme	60
Digestive Fluids	61
Saliva	61
Gastric Fluids	62
Pancreatic Fluid	62
The Self-disinfecting Power of the Skin	63
Lethal Radiation from the Human Body	63
Milk	63

CHAPTER IV.

THE DESTRUCTION OF MICROORGANISMS BY RADIANT ENERGY EMANATIONS.

Ultra-violet Light	68
Irradiated Oils	75
Roentgen-rays	78
Radium and Radio-active Elements	79

CHAPTER V.

THE EFFECT OF TEMPERATURE UPON MICROBIAL LIFE.

Psychrophiles	82
Mesophiles	83
Thermophiles	83

Thermoduric Organisms	84
Heat	85
Boiling	90
Steam Under Pressure	91
Factors Affecting the Efficiency of sterilizers	93
Sterilization of Instruments	95
Sterilization of Rubber Gloves	95
The Effect of Air in the Sterilizer	96
Sterilization Indicators	98
How Steam Sterilization is Accomplished	100
Free Flowing Steam	101
Intermittent Heating	103
Dry Heat	103
Incineration	108
The Thermal Resistance of Several Organisms of Economic or Public Health Significance	108
Cold	119
The Protective Action of Cold	120
Cold Sensitive Organisms	123

CHAPTER VI.

PASTEURIZATION.

Early Observations	129
Methods of Pasteurization	131
Holding Method	131
Vat-type Pasteurizers	131
Pocket-type Pasteurizers	133
Continuous Flow Pasteurizers	133
In-bottle Pasteurizers	134
Disadvantages of the Holding Method	135
The Early "Flash" Pasteurizers	137
Use of Electricity in Pasteurization	138
High-temperature Short-time Pasteurizers	139
Efficiency of Pasteurization in Killing Various Organisms	139
Pasteurization of Ice Cream Mix	160
Pasteurization of Dried Fruit	161
Pasteurization of Wine	162

CHAPTER VII.

OTHER PHYSICAL AGENTS.

Electricity	166
High Frequency Electric Currents	169
High Frequency Sound Waves	169
Desiccation	169
Surface Tension	172
Plasmolysis	175
Plasmoptysis	176
Freshly Distilled Water	177
Pressure	178
Filtration	178
Air Filters	184

CHAPTER VIII.

HOW DISINFECTANTS ARE COMPARED.

Early History	187
The Introduction of Phenol as a Basis of Comparison	188
The Chick-Martin Method	189
The Hygienic Laboratory Method	190

The Cover Slip Modification	193
Difficulties in Evaluation Data	196
The Food and Drug Administration Methods	198
Test Organism and Culture Medium	198
Apparatus	200
Procedure	200
Calculation of the Phenol coefficient	203
✓ The Wet Filter-paper Method	205
The Dry Filter-paper Method	206
The Testing of Ointments and Salves	206
The Agar-plate Method	207
The Serum and Agar-plate Method	207
The Agar Cup-plate Method	210
Germicidal Power of Gases	210
Viricidal Tests	211
Fungicidal Tests	212

CHAPTER IX.

THE DYNAMICS OF DISINFECTION.

Early Observations of Reactions Involved in Disinfection	216
The Law of Mass Action	220
Types of Reactions	224
The Effect of Temperature	224
Calculation of the Temperature Coefficient	225
Exceptions to Normal Temperature Effects	226
Concentration of the Disinfectant	228
Calculation of the Coefficient of Dilution	229
The Protective Action of Organic Matter	231
Surface Tension	233
The Oligodynamic Action of Metals	235
The Cations	236
The Anions	240
The Relation Between Chemical Structure and Germicidal Activity	241
The Application of van't Hoff's Partition Law	246
Acquired Resistance of Microorganisms to Disinfectants	247
Selective Bactericidal Action	249
Correlation of Chemical and Physico-chemical Properties with Specificity	250
Absence of Close Correlation Between Chemotherapeutic Efficiency and Germicidal Powers	251

CHAPTER X.

THE ACIDS.

How Acids Exert Antiseptic and Germicidal Action	256
The Influence of Surface Tension	258
Specificities of the Acids	260
Benzoic Acid	261
Carbon Dioxide	263
Salicylic Acid	265
Boric Acid	266
Acetic Acid	266
Lactic Acid	268
Citric Acid	269
Formic Acid	269
Sulphurous Acid	270
Pyroligneous Acid	270

CHAPTER XI.

THE ALKALIES.

The Strong Alkalies	272
Lye as a Barn Disinfectant	274
Lime	278

Trisodium Phosphate	279
Sodium Carbonate	280
Sodium Bicarbonate	281
Sodium Metasilicate	281
How Alkalies Exert Germicidal Action	281
The Effect of Organic Matter	287
The Effect of Temperature	289
The Specificities of the Alkalies	293
The Use of pH Indicators	293

CHAPTER XII.

THE HEAVY METALS AND THEIR SALTS.

Mercury	296
How Mercury Exerts Its Action	297
The Complex Compounds of Mercury	298
Comparison of Mercury Compounds with Other Disinfectants	299
Mercury Oxycyanide	299
Mercurochrome	302
Metaphen	308
Merthiolate	311
Phenyl-mercuric-nitrate	311
Merphenyl Nitrate	312
The Ethylmercury Compounds	312
Silver	313
Simple Silver Salts	313
Colloidal Silver Compounds	314
Copper and Copper Salts	317
Arsenic and Arsenical Compounds	320
Zinc	321

CHAPTER XIII.

THE DYES.

Theories of Bacteriostatic Action	325
Dye Stasis and Oxidation Reduction Potential	327
Effect of pH	328
Ability of Medicinal Dyes to Penetrate Tissues	329
Toxicity of Medicinal Dies	332
Fungistatic Action	334
Resistance of Spirochetes to Medicinal Dies	335
Resistance of Filtrable Viruses	335
Gentian Violet	336
Brilliant Green	340
Methylene Blue	341
The Acridine Dyes	341
The Pyridine Compounds	344

CHAPTER XIV.

THE PHENOLS, CRESOLS, ALCOHOLS AND RELATED COMPOUNDS.

Phenol	347
How Phenols Exert Germicidal Action	337
The Effect of Organic Matter	349
The Effect of pH	349
The Admixture of Phenols with Alcohol, Glycerin and Oils	351
The Resistance of Viruses	353
Fungicidal Properties	354
Hexylresorcinol	355
Halogenated Derivatives of Phenol and Resorcinol	356

Aniline and Related Amines	358
The Cresols	358
Germicidal Efficiencies	359
Viricidal Powers	360
Effect of Organic Matter	361
The Temperature Coefficient	361
Orthophenylphenol	362
Creosote and Guaiacol	363
Coal-tar Creosote as a Wood Preservative	364
Alcohols	365
Formaldehyde	369
Fumigation	369
Germicidal Efficiency	371
Treatment of Soils. Seeds and Tubers	372
Viricidal Properties	372
Detoxifying Powers	374
Hexamethylenamine	375
Effect of Temperature and Organic Matter	378

CHAPTER XV.

THE HALOGENS.

Chlorine	381
The Hypochlorites	381
Chloramine-T	384
Dichloramine-T	384
Calculation of the so-called "Available chlorine"	385
How Chlorine Exerts Its Germicidal Action	386
The Germicidal Efficiency of Chlorine	388
The Effect of Organic Matter	394
The Effect of the pH	396
The Effect of Temperature	403
The Coefficient of Dilution	406
Toxicity of Chlorine Compounds	406
Sterilization of Dairy Utensils	407
Disinfection of Glassware, Dishes and Silverware	408
Disinfection of Shell Fish	409
Chlorine Compounds in Medicine	411
Iodine	413
The Germicidal Efficiency of Iodine	415
Iodine as a Skin Disinfectant	416
Fungicidal Powers	422
Viricidal Powers	422
The Toxicity of Iodine	423
Fluorine	424

CHAPTER XVI.

WATER PURIFICATION.

Natural Purification	428
The Mechanical purification of Water	429
Slow Sand Filters	429
Rapid Sand Filters	430
Unglazed Earthenware Filters	432
The Chemical Disinfection of Water	432
Chlorine	433
Sodium Peroxide	440
Ozone	440
Iodine	441
Heating	441
Ultra-violet Light	442
Oligodynamic Action of Metals	443
The Disinfection of Water in Swimming Pools	446

CHAPTER XVII.

SEWAGE TREATMENT

Problems of Sewage Disposal	452
Natural Processes of Decomposition	455
The Biochemical Oxygen Demand	455
Why Sewage is Treated	456
Efficiency of Various Methods	457
Chemical Treatment of Sewage	460
Theories Regarding the Action of chlorine Upon Sewage	461
The Amount of Chlorine Necessary	463
Sewage Disposal in Rural Communities	465

CHAPTER XVIII.

MISCELLANEOUS DISINFECTANTS.

Soaps	468
Tooth Pastes and Tooth Powders	477
Ointments	478
The Aromatic Oils	481
Sulphur and Sulphur Preparations	486
Tellurium	489
Oxidizing Agents	489
Ozone	490
Hydrogen Peroxide	490
Potassium Perrnanganate	493

CHAPTER XIX.

THE SELECTION OF A DISINFECTANT.

Factors to be Considered in Selecting a Disinfectant	497
Routine Application of a Disinfectant to Normal Tissues	503
Disinfection of the Oral Cavity	504
Disinfection of Nasal and Bronchial Passages	505
Disinfection of the Ocular Cavity	505
The Fallacy of Intestinal Antiseptics	506
Biliary Antiseptics	506
Urinary Antiseptics	507
The Disinfection of Wounds	509
Disinfection of Surgical Catgut Sutures	510
Sterilization of Ampules	511
