

## CONTENTS

Chapter 1 Introduction	1
1.1 The Instrument	2
1.2 Principles	2
1.3 Experimental	4
Chapter 2 NMR Spectroscopy in the European Regulatory Dossier	5
2.1 Directives, Rules and Guidelines	5
2.2 Information Required to Establish Quality	6
2.3 Control of Starting materials	8
2.4 Control of the Finished Product	13
2.5 Stability Studies	14
2.6 concluding Remarks	15
Chapter 3 Analysis of Drugs	16
3.1 NMR Spectroscopy in International Pharmacopoeias and Related Applications	16
3.2 Identification and Quantification of Impurities in Drugs	32
3.3 Quantification of Drugs in Dosage Forms	43
3.4 Analysis of Complex Mixtures, e. g. Excipients	49
3.5 Concluding Remarks	57
Chapter 4 pH-Dependent NMR Measurements	61
4.1 Introduction	61
4.2 Determination of the Site of Protonation	62
4.3 Determination of Dissociation Constants and Stability Constants by NMR-Controlled Titrations	65
4.4 Applications in Pharmacy	68
Chapter 5 Complexation Behaviour of Drugs Studied by NMR	77
5.1 Selfassociation of Drugs and Association with Other Components of a Formulation	77
5.2 Complexation with Cations	78
Chapter 6 Determination of the Isomeric Composition of Drugs	82
6.1 Determination of the Enantiomeric Excess	85
6.2 Comparison of Different CSAs	87
Chapter 7 On-line Coupling of HPLC or SFC	101
7.1 Introduction	101
7.2 HPLC-NMR Coupling	104
7.3 SPE-HPLC-NMR Coupling	109
7.4 SFE-NMR and SFC-NMR Coupling	111
7.5 Capillary Separations	113
Chapter 8 NMR of Body Fluids	118
8.1 NMR of Urine-Studies of Metabolism	118

8.2 NMR of Bile, Blood Plasma, Cerebrospinal and Seminal Fluids	125
8.3 LC NMR Hyphenation	128
Chapter 9 NMR as a Tool in Drug Research	134
9.1 Introduction	134
9.2 Protein Structures from NMR	135
9.3 Protein-Ligand Interactions	136
Chapter 10 Ligand-Cyclodextrin Complexes	154
10.1 Introduction	154
10.2 Cycodextrins and their Properties	155
10.3 Application of Cyclodextrins in Drug Development and Drug Analysis	157
10.4 NMR Spectroscopic Studies of Ligand-CD Complexes	159
Chapter 11 Ligand-Membrane Interaction	174
11.1 Introduction	174
11.2 Functioning Composition and Organization of Membranes for their Functioning	174
11.3 NMR Spectrometry; an Analytical Tool for the Study and Quantification of Ligand-Membrane Interactions	
11.4 Concluding remarks	226
Chapter 12 Solid-State NMR in Drug Analysis	231
12.1 Fundamentals and Techniques of Solid State NMR	231
12.2 Solid State Conformations of Drugs and Biologically Active Molecules	241
12.3 Polymorphism/Pseudopolymorphism of Drugs	245
12.4 Studies of Tablets and Excipients	252
Chapter 13 MR Imaging and MR Spectroscopy	257
13.1 In vitro and in vivo Measurement Methods	257
13.2 <sup>1</sup> H MR Imaging of Tablets	261
13.3 <sup>1</sup> H Imaging of Plants	265
13.4 Studies on Biopsy Samples and Tissues	269
13.5 Multinuclear Preclinical Measurements in Animals	273
13.6 MRI and MRS in Humans	277
Concluding remarks	294
