Ref. 615.19 LIQ

CONTENTS

1. Particle Characterization in Liquids: Background Information 1
2. Microscopy: The Setup and Operation of the Polarized-Light Microscopy Lab For Particle Identification 29
3. Image Analysis (Automated Microscopy) for Particle Analysis 61
4. The Electrical Sensing Zone Method (The Coulter Principle) 113
5. Particle Sizing Using Ensemble Averaging Techniques 155
6. In Situ Particle Measurement 173
7. Holographic Methods 197
8. Instrumental Analysis of Particulate Matter 235
9. Evaluation and Validation of Nondestructive Particle Inspection Methods and Systems 295
10. Validation of Counting Accuracy in Single-Particle Counters: Application of a New Coincidence Model 451
11. Particles in Semiconductor Manufacturing Process Liquids 569
12. Systematic Approach for Particle Counting Petroleum Oils 585
13. Sources of Particulate Matter in Pharmaceutical and Medical Products 637
14. Physiological Consequences of Injected Particulate 661
15. Diagnostic Applications of Microspheres 687
16. Reference Materials in Particle Measurements 709
17. Selective Particle Capture with Transparent Sieves in the Evaluation of Contamination In Parenteral Solutions 721
18. Particle Size Distribution Analysis Using Light Scattering 745
19. Industry's Role in the Development of Standards and Controls for particulate Matter in Small Volume Injectables 779
20. Pharmaceutical Clean Laboratory Operations 791
21. Particles in Fluids and on Surfaces: Specialized Bibliography 825

Index 871
