

CONTENTS

1.	Virus-Receptor Interactions	1
2.	Design of Peptide Superagonists and Antagonists: Conformational and Dynamic Considerations	9
3.	Localization and Synthesis of Protein Antigenic Sites: Use of Free Synthetic Peptides For the Preparation of Antibodies and T-Cells of Preselected Specificities	29
4.	Studies on New Microbial Secondary Metabolites with Potential Usefulness: Antibiotics, Enzyme Inhibitors, and Immunomodifiers	73
5.	Conformation of Nucleic Acids and Their Interactions with Drugs	105
6.	Substrate Analog Inhibitors of Highly Specific Proteases	137
7.	Design of Novel Cyclic Hexapeptide Somatostatin Analogs from a Model of the Bioactive Conformation	153
8.	Design of Novel Cyclic Hexapeptide Somatostatin Analogs from a Model of the Bioactive Conformation	169
9.	Design of Kinase Inhibitors: Conformational and Mechanistic Considerations	189
10.	Design and Discovery of Asparyl Protease Inhibitors: Mechanistic and Clinical Implications	211
11.	Design of Peptide Analogs: Theoretical Simulation of Conformation, Energetics, and Dynamics	239
