

CONTENTS

Industrial Microencapsulation: Polymers for Microcapsule Walls	1
Design of Polymeric Drug Delivery Systems for Controlled Release of Antitumour Drugs	13
The Use of Gelatin and Alginate for the Immobilisation of Bioactive Agents	18
Microcapsules for Multiple Emulsions	35
Biodegradable Microspheres for Controlled Drug Delivery	52
Nanoparticles – Colloidal Delivery Systems for Drugs and Vaccines	66
Liposomes and Polysialic Acids as Drug Delivery Systems	75
Encapsulation in Softgels for Pharmaceutical Advantage	86
Small Packages That Deliver Big Ideas: An Inside Look into Microcapsule Technology	98
On-line Monitoring and Control of the (Co-) Polymer Encapsulation of Tio <sub>2</sub> in Aqueous Emulsion Systems	102
Why Infusion and Not Microcapsules or Other Controlled Release Methods?	117
Polymeric Formulations of Pest Control Agents	131
The Temperature Controlled Uptake and Release of Molecules and Ions Using a Polymeric Microgel	141
Encapsulation and Controlled Release of Flavours and Fragrances	148
Encapsulation of Industrial Enzymes	163
Subject Index	173
