615.902 ANA

CONTENTS

1. Generation of Test Atmospheres of Toxic Substances for Evaluation of Air Sampling Methods 1
2. Applications of Optical Microscopy in Analysis of Asbestos and Quartz 13
3. Occupational Health Analytcal Chemistry: Quantitation Using X-Ray Powder Diffraction 43
4. Determination of Respirable Quartz by Infrared Analysis with a Multiple Internal Reflectance Accessory 67
5. High Performance Liquid Chromatography and Its Application to Occupational Health Chemistry 81
6. Analysis of Aromatic Amines by High Performance Liquid Chromatography 115
7. A New Fluorescence Procedure for the Determination of Methyl Isocyanate in the Occupational Environment 121
8. Improved Resolution in High Perfo4rmance Liquid Chromatographic Analysis of Polynuclear Aromatic Hydrocarbons Using Ternary Solvent Systems 149
9. A Sampling and Analytical method for Vinyl Acetate in Air 169
10. Collection and Analysis of Airborne Contaminants 185
11. Evaluation of Organic Solvent Vapors in the Workplace 197
12. Monitoring Airborne Contaminants in Chemical Laboratories 215
13. Sampling for Mercaptans by Absorber Tubes 231
14. Atomic Absorption Spectroscopy in the Occupational Laborator 241
15. Metals in the Workplace Environment: Optimization of the Analytical Method by Utilizing Ruggedization Methods 267

16 A Field Test of a Procedure for the Identification of Protein-Bearing Particles in Grain Elevator Air 301

Index 309
