

CONTENTS

1.	Biomonitoring for Pesticide Exposure	1
MOLECULAR CHARACTERIZATION		
2.	Modeling Cytochrome P-450 mediated Acute Nitrile Toxicity Using Theoretical Linear Salvation Energy Relationships	22
3.	Changes I Bjiiochemical and Molecular Biological Parameters Induced by Exposure to Dioxin-Type Chemicals	37
4.	Regulation of Muscarine Receptors as Biomarkers of Exposure to Insecticides	51
5.	Correlations of Molecular Connectivity Indices with Toxicities of Organic Nitriles	65
6.	Computer-Aided Molecular Modeling for Development of Biomarkers for Human Exposure to Pesticides	76
BIOMARKER MEASUREMENT METHODS		
7.	A Biosensor for Monitoring Blood Chlinesterases as a Biomarker of Exposure to Organophosphorus Anticholinesterase Pesticides	114
8.	Hair as a Target Tissue for Developing a Biological Marker for Precursors to 2,5-Hexane-Dione	125
9.	Hemoglobin Adducts of Pesticides	133
10.	Immunoassay for p-Nitrophenol in Urine	158
11.	Isolation of Pesticide-Binding Protein from Rat Blood	166
12.	Body Burden and Nonoccupational Exposure Assessment	178
13.	Chronic Organophosphorus Exposure: Biomarkers in the Detection of Immune Dysfunction And the Development of Lymphomas	197
DATA ANALYSIS AND APPLICATION TO RISK ASSESSMENT		
14.	Validation of a Pharmacokinetic Model To Predict Exposure to Chlorophenoxyacetic Acid Herbicides: Comparison to Conventional Approaches	214
15.	Dermal Absorption and Disposition of Formulations of Malathion in Sprague-Dawley Rats and Humans	231
16.	Physiologically Based Pharmackinetic Models: Examples of Their Use in Exposure and Risk Assessment	264
17.	Prediction of Anticholinesterase Activity and Urinary Metabolites of Isofenphos: Use of A Percutaneous Physiologically Based Pharmackinetic-Physiologically Based Pharmacodynamic Model	284
18.	Analytic Solution of a Linear Physiologically Based Parmacokinetic Model Prototype Useful in Risk Assessment	301
