Preface xxiii

Part I Determining mycotoxins in food and feed

1 Sampling strategies to control mycotoxins **3**
B. Maestroni and A. Cannavan, Joint FAO/IAEA Division of Nuclear Techniques in Food and Agriculture, International Atomic Energy Agency (IAEA), Austria

1.1 Food safety and the requirements for international food trade 4

1.2 Principles of food and feed sampling for mycotoxin analysis 5

1.3 International guidance on sampling food and feed for mycotoxin analysis 11

1.4 Uncertainty estimation and designing sound sampling plans for mycotoxin analysis in food and feed 15

1.5 Quality assurance and quality control procedures in sampling and arrival of the samples at the analytical laboratory 25

1.6 Strengthening national food control systems 28

1.7 Sources of further information and advice 30

1.8 References 31

2	Sample preparation and clean up in mycotoxin analysis: principles, applications and recent developments	37
	<i>E. Razzazi-Fazeli and E. V. Reiter, University of Veterinary Medicine, Austria</i>	
2.1	Introduction	38
2.2	Methods used for extraction and clean up of mycotoxins from complex matrices	38
2.3	Recent developments	54
2.4	Conclusions	58
2.5	Acknowledgements	58
2.6	References	58
3	Chromatographic separation techniques for determination of mycotoxins in food and feed	71
	<i>G. S. Shephard, Medical Research Council, South Africa</i>	
3.1	Introduction	71
3.2	Thin-layer chromatography in mycotoxin analysis of food and feed	72
3.3	Gas chromatography in mycotoxin analysis of food and feed ...	74
3.4	High-performance liquid chromatography in mycotoxin analysis of food and feed	76
3.5	Electrophoretic separations in mycotoxin analysis of food and feed	82
3.6	Future trends	83
3.7	Sources of further information and advice	83
3.8	References	84
4	Mass spectrometry in multi-mycotoxin and fungal spore analysis ..	90
	<i>M. C. Spanjer, Food and Consumer Product Safety Authority, The Netherlands</i>	
4.1	Introduction	90
4.2	Liquid chromatography–mass spectrometry (LC–MS) methods in multi-mycotoxin analysis	93
4.3	Liquid chromatographic aspects of multi-mycotoxin methods ..	101
4.4	Mass spectrometric aspects of multi-mycotoxin methods	103
4.5	LC–MS aspects of multi-mycotoxin analysis	107
4.6	Future trends in liquid chromatography–mass spectrometry analysis	117
4.7	Conclusions	123
4.8	Acknowledgements	123
4.9	References	123

5	Immunochemical methods for rapid mycotoxin detection in food and feed	135
	<i>I. Y. Goryacheva, Saratov State University, Russia and S. De Saeger, Ghent University, Belgium</i>	
5.1	Introduction	135
5.2	Antibody production and characterization	136
5.3	Specificity of immunochemical methods for rapid mycotoxin detection in food and feed	139
5.4	Microtiter plate enzyme-linked immunosorbent assay for rapid mycotoxin detection in food and feed	140
5.5	Non-instrumental rapid tests for mycotoxin detection in food and feed	146
5.6	Conclusions and future trends	158
5.7	References	159
Part II	Quality assurance and official methods for determining mycotoxins in food and feed	
6	Official methods and performance criteria for determining mycotoxins in food and feed	171
	<i>H. Z. Senyuva, FoodLife International Ltd, Turkey and J. Gilbert, FoodLife International Ltd, UK</i>	
6.1	Introduction	172
6.2	Official control laboratories for determining mycotoxins in food and feed	173
6.3	Establishment of method performance criteria for determining mycotoxins in food and feed	174
6.4	Official methods for determining mycotoxins in food and feed	176
6.5	Literature publications of mycotoxin validation studies	184
6.6	Enforcement of mycotoxin regulations	184
6.7	Confirmation of results	185
6.8	Conclusions and future trends	188
6.9	References	189
7	Ensuring the quality of results from food control laboratories: laboratory accreditation, method validation and measurement uncertainty	194
	<i>J. O. De Beer, Scientific Institute of Public Health, Brussels, Belgium and C. Van Poucke, Laboratory of Food Analysis, Faculty of Pharmaceutical Sciences, Ghent University, Belgium</i>	
7.1	Introduction: why accreditation can be important for laboratories	195
7.2	Laboratory accreditation and ISO 17025	196
7.3	Statistical method validation approach for ensuring the quality of results from food control laboratories	203

7.4	Comparison of a routine method with a reference method for validating the results from food and feed control laboratories . .	214
7.5	Measurement uncertainty in the results from food and feed control laboratories	215
7.6	Conclusions and future trends	217
7.7	References	219

Part III Development and analysis of biomarkers for mycotoxins

8	Developing biomarkers of human exposure to mycotoxins	225
	<i>M. N. Routledge and Y. Y. Gong, University of Leeds, UK</i>	
8.1	Introduction to biomarkers of exposure	225
8.2	Biomarkers of exposure for aflatoxin	228
8.3	Biomarkers of exposure for fumonisin	234
8.4	Biomarkers of exposure for deoxynivalenol	237
8.5	Summary	239
8.6	References	239
9	Developing mechanism-based and exposure biomarkers for mycotoxins in animals	245
	<i>R. T. Riley and K. A. Voss, United States Department of Agriculture, Agricultural Research Service, USA, R. A. Coulombe, Department of Veterinary Sciences, Utah State University, USA, J. J. Pestka, Michigan State University, USA and D. E. Williams, Oregon State University, USA</i>	
9.1	Background	246
9.2	Aflatoxin B ₁	247
9.3	Deoxynivalenol and other trichothecenes	250
9.4	Fumonisin	255
9.5	Ochratoxin A	260
9.6	Zearalenone	262
9.7	Future trends	265
9.8	Acknowledgements	267
9.9	References	267

Part IV Determining mycotoxigenic fungi in food and feed

10	Rationale for a polyphasic approach in the identification of mycotoxigenic fungi	279
	<i>J. C. Frisvad, Technical University of Denmark, Denmark</i>	
10.1	Introduction	279
10.2	Mycotoxigenic fungi	281
10.3	Identification methods	292

10.4	Molecular methods for identification	293
10.5	Conclusions	293
10.6	Acknowledgement	293
10.7	References	293
11	Molecular identification of mycotoxigenic fungi in food and feed	298
	<i>F. Munaut and F. Van Hove, Université catholique de Louvain, Belgium and A. Moretti, National Research Council (CNR), Italy</i>	
11.1	Introduction	299
11.2	Polymerase chain reaction (PCR) detection and quantification using conserved genes	299
11.3	Polymerase chain reaction detection and quantification using anonymous DNA sequences	304
11.4	Polymerase chain reaction detection and quantification using mycotoxin biosynthesis pathway genes	305
11.5	Multistep strategies	310
11.6	Multiplex detection	311
11.7	Polymerase chain reaction-based methods	313
11.8	Novel technologies	317
11.9	Conclusion and future prospects	320
11.10	References	320
12	Identification of genes and gene clusters involved in mycotoxin synthesis	332
	<i>D. W. Brown, R. A. E. Butchko and R. H. Proctor, United States Department of Agriculture, Agricultural Research Service (USDA-ARS), USA</i>	
12.1	Introduction	333
12.2	Genetic basis for secondary metabolite biosynthesis	333
12.3	Gene and gene cluster identification: pre-genomics	336
12.4	Gene and gene cluster identification: early-genomics	338
12.5	Gene and gene cluster identification: post-genome genomics ..	341
12.6	Future trends	344
12.7	Acknowledgements	345
12.8	References	345
13	DNA barcoding of toxigenic fungi: a perspective	349
	<i>M. Santamaria, National Research Council (CNR), Italy</i>	
13.1	DNA barcode: a new opportunity to discriminate fungi species	350
13.2	Future trends in DNA barcoding of fungi	351
13.3	Sources of further information and advice about the DNA barcode	353
13.4	References	354

Part V Emerging methods for mycotoxin analysis in food and feed

14 Emerging bio-sensing methods for mycotoxin analysis	359
<i>I. E. Tothill, Cranfield University, UK</i>	
14.1 Introduction	359
14.2 Biosensors as diagnostics tools in mycotoxin analysis	360
14.3 Lab-on-a-chip for multiplex detection	372
14.4 Nanomaterials and their use in biosensors for mycotoxin analysis	374
14.5 Electronic nose method for mycotoxin analysis	375
14.6 Future trends	376
14.7 Conclusions	377
14.8 Acknowledgements	377
14.9 References	377
15 Masked mycotoxins in food and feed: challenges and analytical approaches	385
<i>J. Diana Di Mavungu and S. De Saeger, Ghent University, Belgium</i>	
15.1 Introduction	385
15.2 Occurrence of masked mycotoxins in food and feed	386
15.3 Analysis of masked mycotoxins in food and feed	389
15.4 Conclusions	395
15.5 References	396
16 Spectroscopic techniques for fungi and mycotoxins detection	401
<i>C. B. Singh and D. S. Jayas, University of Manitoba, Canada</i>	
16.1 Introduction	401
16.2 Spectroscopic techniques	402
16.3 Applications	408
16.4 Summary	412
16.5 References	412
<i>Index</i>	<i>415</i>
