

## CONTENTS

1. Antioxidant nutrients and protection from free radicals	1
2. Carotenoids and health risk	31
3. The role of nutrients in detoxification mechanisms	54
4. Foods derived from genetically modified crop plants	75
5. Allergic reactions and food intolerances	93
6. Ethanol toxicity and nutritional status	122
7. Interactions between foods, nutritional supplements and drugs	155
8. Phytosterols in human health	173
9. Threshold of regulation: A unifying concept in food safety assessment	190
10. Biotechnology-derived and novel foods: Safety approaches and regulations	203
11. Safety, effectiveness and labeling of self-care products	228
12. Functional of foods: Regulatory and scientific considerations	243
13. Estimation of food chemical intake	263
14. Postmarketing surveillance in the food industry: The aspartame case study	287
15. Regulation of flavor ingredients	316
16. Food irradiation	340
17. Mechanistic considerations in the regulation and classification of chemical carcinogens	387
Index	422
