1 Introduction to food toxicology	
<i>S. T. Omaye, University of Nevada. USA</i>	
1.1 Introduction: defining food toxicology	1
1.2 Types of toxicant: contaminants	2
1.3 Types of toxicant: naturally-occurring toxicants	7
1.4 Types of toxicant: food processing toxicants	10
1.5 Current issues: pathogens, genetic variability and antibiotic resistance	13
1.6 Current issues: novel foods and natural toxicants	20
1.7 Conclusions	23
1.8 References	24
Part I Assessing and managing risks	27
2 Genetic susceptibility to dietary carcinogens	29
<i>S. Peterson. J. W. Lampe and D. L. Eaton, University of Washington and Fred Hutchinson Cancer Research Center. USA</i>	
2.1 Introduction: diet and cancer	29
2.2 Dietary carcinogens and anticarcinogens: mycotoxins, heterocyclic amines, aromatic hydrocarbons. N-nitroso compounds and phytochemicals	30
2.3 Genetic influences on carcinogen-metabolizing enzymes	35

2.4	Evidence of gene-diet interactions	37
2.5	Summary and future trends	40
2.6	Sources of further information and advice	42
2.7	References	42
3	Assessing the mutagenicity of chemicals in food: the case of pesticides	50
	<i>J. M. Parry. University of Wales – Swansea, UK</i>	
3.1	Introduction: mutagenicity test programmes	50
3.2	Criteria for the testing of pesticides	52
3.3	Selecting appropriate tests	52
3.4	Assessing dose-response relationships	59
3.5	Developing test methodologies	61
3.6	Conclusions	62
3.7	Acknowledgements	63
3.8	References and further reading	63
4	The impact of chemical residues: the case of polychlorinated biphenyls (PCBs)	66
	<i>H. Gallagher. I. E. J. De Souza and C. M. Regan, University College Dublin. Ireland</i>	
4.1	Introduction: risks posed by organohalogen compounds	66
4.2	Organohalogenes as neurotoxins	67
4.3	Neurobehavioural consequences of PCB exposure	69
4.4	Molecular mechanisms of organohalogen-induced toxicity ...	76
4.5	Conclusion	79
4.6	Acknowledgements	80
4.7	References	80
5	Targeted and rapid methods in analysing residues in food	88
	<i>E. P. Meulenberg, ELTI Support. The Netherlands; M. M. Rhemrev-Boom. ResQ Lab. The Netherlands; and C. G. J. Koopal, TNO Nutrition and Food Research. The Netherlands</i>	
5.1	Introduction	88
5.2	The principles of immunoassays	89
5.3	The use of immuno-affinity chromatography	92
5.4	Developing immunoassays to detect residues in food and water	98
5.5	Recent developments in immunoassays	104
5.6	Recent developments in immuno-affinity chromatography ...	106
5.7	The use of immunosensors in residue analysis	109
5.8	References	114

6	Good agricultural practice and HACCP systems in the management of pesticides and veterinary residues on the farm	119
	<i>R. Early. Harper Adams University College. UK</i>	
6.1	Introduction	119
6.2	Safety issues in the food supply chain	120
6.3	Good agricultural practice	126
6.4	The Hazard Analysis Critical Control Point (HACCP) system	131
6.5	The HACCP study	134
6.6	Implementing and maintaining HACCP systems	149
6.7	Future trends	150
6.8	Conclusion	152
6.9	Acknowledgements	152
6.10	Sources of further information and advice	152
6.11	References and bibliography	153
Part II	Veterinary residues	155
7	Assessing the safety of veterinary drug residues	157
	<i>K. N. Woodward. International Federation for Animal Health. Belgium</i>	
7.1	Introduction	157
7.2	Types of toxicity study	158
7.3	Elaboration of maximum residue limits (MRLs) for veterinary drugs in the EU	161
7.4	Elaboration of MRLs for particular foods in the EU	166
7.5	International regulation: the role of the Joint Expert Committee on Food Additives (JECFA)	168
7.6	Conclusions	169
7.7	References	171
8	The toxicity of particular veterinary drug residues	175
	<i>K. N. Woodward. International Federation for Animal Health. Belgium</i>	
8.1	Introduction	175
8.2	Griseofulvin	175
8.3	β -Lactam antibiotics: penicillins and cephalosporins	177
8.4	Macrolide antibiotics: spiramycin, tylosin and tilmicosin ...	181
8.5	Aminoglycosides	183
8.6	Fluoroquinolones	185
8.7	Sulfadimidine (sulfamethazine)	186
8.8	Carbadox and olaquinox	186
8.9	Furazolidone and related compounds	188
8.10	Chloramphenicol	189
8.11	Ivermectin and related compounds	191
8.12	Tranquillisers: xylazine and azaperone	193
8.13	Carazolol	194

8.14	Conclusions	195
8.15	References	195
9	The rapid detection of veterinary drug residues	224
	<i>N. van Hoof; K. de Wasch, H. Noppe. S. Poelmans and H. F. de Brabender. University of Ghent, Belgium</i>	
9.1	Introduction	224
9.2	Veterinary medicinal products	225
9.3	Methods for detecting residues	226
9.4	Validating detection methods	229
9.5	Rapid on-line confirmation of different veterinary residues ..	231
9.6	Future trends	245
9.7	Acknowledgements	246
9.8	References	246
10	New techniques for the rapid detection of growth promoters in farm animals	249
	<i>E. Magner and M. Jamal, University of Limerick. Ireland</i>	
10.1	Introduction: detecting the use of growth promoters	249
10.2	Existing detection techniques and their limitations	250
10.3	The use of immunosensors to detect growth promoters	252
10.4	Key issues in developing new biosensors	258
10.5	References	259
11	The rapid detection of coccidiostat drug residues in farm animals	262
	<i>M. Tuomola and T. Lovgren. University of Turku, Finland</i>	
11.1	Introduction	262
11.2	The use of anticoccidial drugs in poultry farming	263
11.3	The use of time-resolved fluoroimmunoassays (TR-FIAs) ...	265
11.4	Screening for coccidiostat residues by automated TR-FIAs ..	267
11.5	Future trends	271
11.6	Acknowledgement	271
11.7	References	272
Part III	Pesticides	275
12	Surveillance for pesticide residues	277
	<i>C. K. Winter. University of California – Davis. USA</i>	
12.1	Introduction	277
12.2	Pesticide regulation in the United States	278
12.3	Sample collection, preparation and analysis	281
12.4	Results from pesticide residue surveillance programs	283
12.5	Interpreting the results of pesticide residue surveillance programs	290

12.6	Future trends	291
12.7	Sources of further information and advice	292
12.8	References	292
13	The rapid detection of pesticide residues	294
	<i>R. Luxton and J. Hart. University of the West of England. UK</i>	
13.1	Introduction	294
13.2	Detecting pesticides: physicochemical methods	297
13.3	Detecting pesticides: biological methods	298
13.4	The principles of biosensors	301
13.5	Developing low-cost biosensors	308
13.6	Using biosensors: pesticide residues in grain. fruit and vegetables	309
13.7	Future trends	311
13.8	Sources of further information and advice	312
13.9	Further reading	312
14	Detecting residues of urea and carbamate pesticides	314
	<i>Y. Picó, G. Font and J. Mañes, University of Valencia. Spain</i>	
14.1	Introduction: key issues in detection	314
14.2	Sample preparation	315
14.3	Techniques for rapid screening of samples	329
14.4	Separation techniques	333
14.5	Detectors used in combination with separation techniques ...	342
14.6	Future trends	353
14.7	Sources of further information and advice	354
14.8	References	354
15	Detecting fungicide residues	360
	<i>M. M. Sheehan, H. Berney and A. Matthewson. University College Cork. Ireland</i>	
15.1	Introduction	360
15.2	Conventional techniques and immunoassays for detecting fungicide residues	368
15.3	Detecting fungicide residues using biosensors	373
15.4	Conclusions	380
15.5	Sources of further information and advice	380
15.6	Acknowledgements	381
15.7	References	381
16	Detecting herbicide residues	386
	<i>J. L. Tadeo, C. Sanchez-Brunete and B. Albero. INIA. Spain</i>	
16.1	Introduction: key issues in detecting herbicide residues in food	386
16.2	Trends in sample preparation	386

16.3	Analytical methods for particular herbicide residues	395
16.4	Levels of herbicide residues found in food	403
16.5	Sources of further information and advice	403
16.6	References	405
 Part IV Other chemical residues in food		411
17	Xenoestrogens	413
	I. Shaw, University of Canterbury, New Zealand; B. Thompson and P. Cressey, Institute of Environmental Science and Research, New Zealand	
17.1	Introduction	413
17.2	Mechanism of action of xenoestrogens	415
17.3	Assays for xenoestrogens	419
17.4	Measuring risks from different xenoestrogens	421
17.5	Health effects of xenoestrogens	423
17.6	Xenoestrogens in food and levels of dietary intake	426
17.7	Regulatory control of xenoestrogens	430
17.8	Future trends	431
17.9	Sources of further information and advice	432
17.10	Acknowledgement	432
17.11	References	432
18	Dietary estrogens	436
	S. Hendrich, Iowa State University, USA	
18.1	Introduction: defining dietary estrogens	436
18.2	The range of dietary estrogens	437
18.3	Assessing the estrogenicity of dietary estrogens	440
18.4	Assessing the toxicity of dietary estrogens	446
18.5	The benefits of dietary estrogens: cancer prevention	452
18.6	The benefits of dietary estrogens: preventing osteoporosis and atherosclerosis	457
18.7	Dietary intakes of estrogens	462
18.8	Future trends and sources of further information and advice ..	463
18.9	References	464
19	Polycyclic aromatic hydrocarbons (PAHs)	473
	K. Tamakawa, Sendai City Institute of Public Health, Japan	
19.1	Introduction	473
19.2	Physical and chemical properties of PAHs	474
19.3	Health effects of PAHs	479
19.4	Analytical methods for PAHs	489
19.5	The occurrence of PAHs in food	494
19.6	Future trends	504

19.7	Sources of further information and advice	505
19.8	Acknowledgements	506
19.9	References	506
20	Dioxins and Polychlorinated biphenyls (PCBs)	519
	<i>L. A. P. Hoogenboom, RIKILT – Institute of Food Safety, The Netherlands</i>	
20.1	Introduction	519
20.2	Dioxins and PCBs	519
20.3	Assessing the toxic effects of dioxins and dioxin-like PCBs .	523
20.4	Analytical methods and current exposure levels	525
20.5	Brominated flame retardants	528
20.6	Abbreviations	531
20.7	References	531
21	Detecting organic contaminants in food: the case of fish and shellfish	536
	<i>S. Van Leeuwen and J. de Boer. Netherlands Institute for Fisheries Research</i>	
21.1	Introduction: the problem of organic contaminants	536
21.2	Sources of organic contaminants	537
21.3	Organic contaminants in fish	538
21.4	Analysing particular organic contaminants in fish	559
21.5	Health issues for organic contaminants in fish	565
21.6	Future trends	566
21.7	Sources of further information and advice	567
21.8	References	567
22	Identifying allergenic proteins in food	577
	<i>E. N. Clare Mills. J. A. Jenkins and J. A. Robertson. Institute of Food Research. UK; S. Griffiths-Jones, Wellcome Trust Sanger Institute. UK; and P. R. Shewry, Institute of Arable Crops Research. UK</i>	
22.1	Introduction: the nature of allergens and allergies	577
22.2	Types of plant food allergens and their characteristics	578
22.3	Identifying potentially allergenic proteins: bioinformatics	585
22.4	Identifying potentially allergenic proteins: resistance to pepinolysis and IgE reactivity	587
22.5	Future trends	592
22.6	Acknowledgements	592
22.7	References	593
23	Toxicological screening of paper and board packaging	598
	<i>A. von Wright. University of Kuopio, Finland</i>	
23.1	Introduction	598
23.2	Regulatory background	598

23.3	Requirements for toxicological testing	600
23.4	Cytotoxicity tests	601
23.5	Genotoxicity tests	603
23.6	Applying tests to paper and board	605
23.7	Conclusions and future trends	607
23.8	References	608
24	Detecting metal contamination	610
	<i>R. Monoro and D. Vélrez, Instituto de Agroquímica y Tecnología de Alimentos (CSIC). Spain</i>	
24.1	Introduction	610
24.2	Methods of preparing food samples for analysis	610
24.3	Analytical methods for metal detection	614
24.4	Cadmium speciation in food	618
24.5	Lead speciation in food	618
24.6	Mercury speciation in food	619
24.7	Arsenic speciation in food	622
24.8	Future trends	626
24.9	References	627
