

CONTENTS

OVERVIEW

1. Structural Principles of Lipopolysaccharides and Biological Properties of Synthetic Partial Structures 3

STRUCTURE, IMMUNOCHEMISTRY, AND SYNTHESIS OF O-ANTIGENTS

2. Lipopolysaccharide Antigens of *Pseudomonas aeruginosa* 21
3. Synthesis of *Shigella flexneri* O-Antigenic Repeating Units: Conformational Probes and Aids to Monoclonal Antibody Production 49
4. Synthesis of O-Antigenic Polysaccharides: Pathways for the Polymerization of Oligosaccharide Repeating Units 65
5. Immunology and Immunochemistry of Synthetic and Semisynthetic *Salmonella* O-Antigen-Specific Glycoconjugates 83

3-DEOXY-D-MANNO-2-OCTULOSONIC ACID

6. Synthesis of Oligosaccharides Containing 3-Deoxy-D-manno-2-octulopyranosylono (KDO) Residues 121
7. Synthesis and Use of 3-Deoxy-D-manno-2-octulosonate (KDO) in *Escherichia coli*: Potential Sites of Inhibition 141
8. Capsular Polysaccharides of Uropathogenic *Escherichia coli* 171

STRUCTURE AND BIOLOGICAL ACTIVITY OF LIPID A

9. Analysis of the Primary Structure of Lipid A 195
10. Use of Endotoxin in Cancer Immunotherapy 2nd Characterization of Its Nontoxic but Active Lipid A Components 219

SYNTHESIS OF LIPID A ANALOGS

11. Chemical Synthesis of Lipid A for the Elucidation of Structure-Activity Relationships 237
12. The Convergent Approach to the Synthesis of Lipid A and Its Analogs 255
13. Synthetic Studies on the Lipid A Component of Bacterial Lipopolysaccharide 277
14. Synthetic Studies on Structural Elements of the Hydrophobic Region Present in Bacterial Endotoxins 301
