**SECTION 2 CYTOLOGY**

SECTION EDITOR ADRIAN T WARFIELD

**9 Cytopathology***Adrian T Warfield*

|   |     |
|---|-----|
| Introduction  | 95  |
| Types of cytology specimen                          | 95  |
| Smearing techniques                                 | 99  |
| Specimen fixation                                   | 99  |
| Cell concentration techniques                       | 99  |
| Staining methods                                    | 103 |
| Cytodiagnosis                                       | 104 |
| Cytomorphology                                      | 105 |
| Accuracy and limitations of cytology                | 112 |
| Gynaecological cytopathology and cervical screening | 113 |
| Quality assurance in diagnostic cytology            | 119 |
| Further reading                                     | 119 |

**SECTION 3****MICROBIOLOGY – BACTERIOLOGY**

SECTION EDITOR DARREL HO-YEN

**10 Microscopy in bacteriology: application and sample preparation****123***Dugald R Baird*

|  |     |
|--|-----|
| Introduction   | 123 |
| Light microscopy   | 123 |
| Fluorescence microscopy  | 123 |
| Specimens for microscopy   | 124 |
| Examination of unstained specimens by transmitted light          | 124 |
| Examination of unstained specimens using darkground illumination | 125 |
| Staining of specimens  | 125 |
| Further reading  | 128 |

**11 Culture media in bacteriology****129***Eric Y Bridson*

|   |     |
|---|-----|
| Culture media in microbiology                                   | 129 |
| Formulation of culture media                                    | 130 |
| Enrichment and selection in fluid media                         | 131 |
| Chemically defined culture media versus complex undefined media | 131 |
| Growth environmental factors                                    | 132 |
| Water activity ( $a_w$ )  | 132 |
| Storage of culture media  | 132 |
| Quality tests   | 133 |
| The future of culture media                                     | 134 |
| Quantal microbiology  | 134 |
| Further reading   | 134 |

**12 Identification of bacteria****135***Andrew J Hay*

|  |     |
|--|-----|
| Introduction                                     | 135 |
| Direct identification                            | 135 |
| Identification following culture                 | 136 |
| Identification of bacteria of medical importance | 140 |
| Further reading                                  | 144 |

**13 Automated tests in bacteriology****145***Paul C Boreland*

|  |     |
|--|-----|
| Introduction   | 145 |
| Blood culture systems  | 145 |
| Antimicrobial susceptibility testing and identification systems                  | 146 |
| Urine screening systems  | 148 |
| Identification and antimicrobial susceptibility testing systems for mycobacteria | 149 |
| Comment  | 150 |
| Further reading  | 150 |

**14 Bacteriology molecular techniques: sample preparation and application****151***Richard E Holliman and Julie D Johnson*

|                                 |     |
|---------------------------------|-----|
| The need for molecular methods  | 151 |
| Sample preparation              | 151 |
| Amplification                   | 152 |
| Quality control                 | 153 |
