

## CONTENTS

SHORT-LIVED RADIONUCLIDES		
1.	A New Generator for Production of Short-Lived Au-195m Radioisotope	3
2.	Usefulness and Performance of the Au-195m Generator	23
3.	Preparation and Characteristics of a Hg-195m/Au-195m Generator	35
4.	Chemical and Physical Parameters Affecting the Performance of the Os-191/Ir Generator	51
5.	A Rb-81/Kr-81m Perfusion Generator	67
POSTRON-EMITTING RADIONUCLIDES		
6.	Production of Radionuclides for Generator Systems	77
7.	An Automated Microprocessor-Controlled Rb-82 Generator	97
8.	Large-Scale Isolation of Sr-82 for Generator Production	123
9.	A Radionuclide Generator and Infusion System for Pharmaceutical Quality Rb-82	135
10.	Evaluation of Adsorbents for the Ta-178 Generator	151
11.	Electrochemistry as a Basis for Radiochemical Generator Systems	169
RADIONUCLIDE PRODUCTION AND MISCELLANEOUS APPLICATIONS		
12.	Production and Recovery of Large Quantities of Radionuclides for Nuclear Medicine Generator Systems	179
13.	The Short-Lived Radionuclide Generator: Physical Characteristics, Assessment and Conditions for Optimal Clinical Use	185
14.	Cryptate Complexes of Generator-Produced Isotopes	199
15.	Generator-Produced Bi-212 Chelated to Chemically Modified Monoclonal Antibody for Use in Radiotherapy	215
	Author Index	231
	Subject Index	231
