

CONTENTS

1.	Experimental Zinc Deficiency in Humans: An Overview of Original Studies	1
2.	Trends in Levels of Zinc in the U.S. Food Supply, 1909-1981	15
3.	Assessment of the Bioavailability of Dietary Zinc in Humans Using the Stable Isotopes Zn and ⁶⁵ Zn	31
4.	Stable Isotope Approaches for Measurement of Dietary Zinc Availability in Humans	41
5.	Zinc Absorption in Humans: Effects of Age, Sex and Food	61
6.	A Redefinition of Zinc Deficiency	83
7.	Utilization of Zinc by Humans	107
8.	Zinc Bioavailability from Vegetarian Diets: Influence of Dietary Fiber, Ascorbic Acid, And Past Dietary Practices	115
9.	Effect of Fiber and Oxalic Acid on Zinc Balance of Adult Humans	127
10.	The Role of Phytate in Zinc Bioavailability and Homeostasis	145
11.	Dietary Phytate Zinc Molar Ratio and Zinc Balance in Humans	159
12.	Zinc Bioavailability from Processed Soybean Products	173
13.	Zinc Bioavailability from Cereal-Based Foods	185
14.	Zinc Bioavailability in Infant Formulas and Cereals	197
15.	Zinc Absorption from Composite Meals	211
16.	Zinc Balances in Humans During Different Intakes of Calcium and Phosphorus	223
17.	Zinc Transport by Isolated, Vascularly Perfused Rat Intestine and Intestinal Brush Border Vesicles	233
18.	Competitive Mineral-Mineral Interaction in the Intestine: Implications for Zinc Absorption in Humans	247
	Index	273
