

CONTENTS

1.	Inhibitors of Viral Nucleic Acid Polymerases: Pyrophosphate Analogues	1
2.	Synthesis of Acyclonucleoside Phosphonates for Evaluation as Antiviral Agents	17
3.	Structural Requirements for Enzymatic Activation of Acyclonucleotide Analogues: Relationship to Their Mode of Antiviral Action	35
4.	Phosphonylmethyl Ethers of Nucleosides and Their Acyclic Analogues	51
5.	Synthesis and Antiviral Activity of Phosphonylmethoxyethyl Derivatives of Purine and Pyrimidine Bases	72
6.	Synthesis and Antiviral Activity of Nucleotide Analogues Bearing the (S)-(3-Hydroxy 2-phosphonylmethoxy) propyl Moiety Attached to Adenine, Guanine, and Cytosine	88
7.	Design of Inhibitors of Herpes Simplex Virus Thymidine Kinase	103
8.	Nucleosides as Herpesvirus-Specific Inhibitors of Protein Glycosylation	116
9.	Antiviral Activity of the Nucleotide Analogue Ribavirin 5'Sulfamate	124
10.	Design, Synthesis, and Antiviral Activity of Nucleoside and Nucleotide Analogues	140
11.	Nucleotide Dimers as Anti Human Immunodeficiency Virus Agents	156
12.	Oligonucleotide Analogues as Potential Chemotherapeutic Agents	170
