<i>List of contributors</i>	ix
<i>Preface</i>	x
I What do we know about cancer and its therapy?	I
1. A brief overview of the disease and its treatment	1
1.1. Incidence and causes	1
1.2. Classification of cancer types	3
1.3. Therapy	4
1.3.1. <i>Conventional cancer treatments</i>	4
1.3.2. <i>Advanced cancer treatments</i>	6
1.3.3. <i>Other advanced therapies</i>	9
1.3.4. <i>Alternative cancer treatments</i>	9
1.4. From source to patient: testing the efficiency of a candidate anticancer drug	10
1.4.1. <i>Preclinical tests</i>	10
1.4.2. <i>Phases of clinical trials</i>	13
1.4.3. <i>Clinical trial protocols</i>	13
2 Plants and cancer	15
2. The plant kingdom: nature's pharmacy for cancer treatment	15
2.1. Brief overview of the general organization of the plant cell	15
2.2. The chemical constituents of the plant cell	16
2.2.1. <i>Primary metabolites</i>	16
2.2.2. <i>Secondary metabolites</i>	17
2.3. Why do plant compounds have an anticancer activity?	17
2.4. Chemical groups of natural products with anticancer properties	19
2.5. Biotechnology and the supply issue	32
3 Terrestrial plant species with anticancer activity: a presentation	35
3.1. Introduction: general botanical issues	35
3.2. Species-specific information	36
3.2.1. <i>The guardian angels: plant species used in contemporary clinical cancer treatment</i>	36

- 3.2.2. *Promising candidates for the future: plant species with a laboratory-proven potential* 72
- 3.2.3. *The fable: where tradition fails to meet reality* 160
- 3.2.4. *Other species with documented anticancer activity* 166

4 Cytotoxic metabolites from marine algae	195
4.1. Cytotoxic metabolites from marine algae	195
4.2. Cytotoxic metabolites from chlorophyta	198
4.3. Cytotoxic metabolites from rhodophyta	211
4.4. Cytotoxic metabolites from phaeophyta	221
4.5. Cytotoxic metabolites from microalgae	227
Conclusions	240
Appendix: chemical structures of selected compounds	242
<i>References</i>	274
<i>Index</i>	289
