

CONTENTS

Epidemiological Studies: Risk Factors and Diets	
1. Diet and Cancer: Perspectives of Prevention	1
2. EPIC-Italy: A Molecular Epidemiology Project on Diet and Cancer	21
3. Nutritional Factors in Human Cancers	29
4. Alcohol and Cancer	43
5. Energy Sources and Risk of Cancer of the Breast and Colon-Rectum in Italy	51
6. Organochlorines and Breast Cancer: A Study on Neapolitan Women	57
7. Olive Oil Consumption and Cancer Mortality in Italy: A Correlation Study	67
Cell Growth and Differentiation: Molecular Bases of Nutrient Effects	
8. Cell Division Cycle Alterations and Human Tumors	73
9. Regulation of p53 Function in Normal and Malignant Cells	89
10. The Role of Micronutrients in DNA Synthesis and Maintenance	101
11. Biological Effects of Hydroxytyrosol, A Polyphenol from Olive Oil Endowed with Antioxidant Activity	115
12. Protective Effects of Butyric Acid in Colon Cancer	131
13. Short-Chain Fatty Acid in the Human Colon: Relation to Inflammatory Bowel Diseases and Colon Cancer	149
14. Brassica Vegetables and Cancer Prevention: Epidemiology and Mechanisms	159
15. Stilbenes and Bibenzyls with Potential Anticancer or Chemopreventive Activity	169
16. Post-Translational Modifications of Eukaryotic Initiation Factor-5A (eIF-5A) as a New Target for Anti-Cancer Therapy	187
Molecular Epidemiology: An Innovative Trend in Cancer Prevention	
17. Diet, Fibers, and Colon Cancer	199
18. Phytochemicals as Modulators of Cancer Risk	207
19. Low Dose Exposure to Carcinogens and metabolic Gene Polymorphisms	223
20. Carcinogen-DNA Adducts as Tools in Risk Assessment	231
21. Significance of Genetic Polymorphisms in Cancer Susceptibility	241
22. DNA Repair Pathways and Cancer Prevention	253
Nutritional Intervention for Cancer Prevention and Perspectives	
23. Cereals, Fiber, and Cancer Prevention	269
24. Carnitine System and Tumor	273
