

CONTENTS

1. Polycyclic Aromatic Hydrocarbon Carcinogenesis: An Introduction	1
2. Stereoselective Metabolism and Activations of Polycyclic Aromatic Hydrocarbons	19
3. Synthesis of the Dihydrodiol and Diol Epoxide Metabolites of Carcinogenic Polycyclic Hydrocarbons	35
4. The Bay Region Theory of Polycyclic Aromatic Hydrocarbon Carcinogenesis	63
5. Effects of Methyl and Fluorine Substitution of the Metabolic Activation and Tumorigenicity of Polycyclic Aromatic Hydrocarbons	85
6. Mechanisms of Interaction of Polycyclic Aromatic Diol Epoxides with DNA and Structures of the Adducts	107
7. X-ray Analyses of Polycyclic Hydrocarbon Metabolite Structures	125
8. Polycyclic Aromatic Hydrocarbon-DNA Adducts: Formation, Detection, and Characterization	187
9. The Intercalation of Benzo[a]pyrene and 7,12-Dimethylbenz[a]anthracene Metabolites and Metabolite Model Compounds into DNA	209
10. A Mechanism for the Stereoselectivity and Binding of Benzo[a]pyrene Diol Epoxides to DNA	239
11. One-Electron Oxidation in Aromatic Hydrocarbon Carcinogenesis	289
12. Hydroperoxide-Dependent Oxygenation of Polycyclic Aromatic Hydrocarbons and Their Metabolites	307
13. The Mutational Consequences of DNA Damage Induced by Benzo[a]pyrene	327
14. Chemical Properties of Ultimate Carcinogenic Metabolites of Arylamines and Arylamides	341
15. The In Vitro Metabolic Activation of Nitro Polycyclic Aromatic Hydrocarbons	371
Author Index	397
Subject Index	397
