

CONTENTS

WEAR OF ORTHOPAEDIC BEARINGS	
Predicting the Clinical Wear Performance of Orthopaedic Bearing Surfaces	1
A New Screening Method Designed for Wear Analysis of Bearing Surfaces Used in Total Hip Arthroplasty	30
METAL-ON-METAL BEARINGS	
A Review of the Effects of Design, Contact Stress, and Materials on the Wear of Metal-On-Metal Hip Protheses	47
Co-Cr-Mo Alloys Used in Metal-Metal Bearing Surfaces	55
Glassy Alloys as Potential Bearing Surfaces for Orthopaedic Implants	69
Tribological Investigations of Cobalt-Based Alloys in Metal-On-Metal Contacts Using a Reciprocating Cylinder-On-Flat Apparatus with Bovine Serum Lubricants	76
Simulator Wear of Some Commercially Available Metal-On-Metal Hip Implants	92
Numerical Analysis of Time-Varying Fluid Film Thickness in Metal-Metal Hip Implants in Simulator Tests	111
Wear Morphology of Metal-Metal Implants: Hip Simulator Tests Compared with Clinical Retrievals	129
Clinical Wear Performance of Metal-On-Metal Hip Arthroplasties	144
CERAMIC-ON-CERAMIC BEARINGS	
The Wear Characteristics of Sivash SRN Co-Cr-Mo THA Articulating Surfaces	159
Improving the Reliability of the Ceramic-On-Ceramic Wear Couple in THR	173
Wear Behavior of Ceramic Pairs Compared on Different Testing Configurations	186
Adherent Alumina Coatings by Ion Beam Synthesis	197
ALTERNATIVE POLYMERIC BEARING MATERIALS	
Clinical Results of Alumina-on-Alumina Couple in Total Hip Replacement	213
Self-Reinforcing Composite Polyethylene (SRC-PE): A Novel Material for Orthopedic Applications	235
An UHMWPE Homocomposite for Joint Protheses	256
Characterization of Carbon Fiber-Reinforced Peek Composite For Use as a Bearing Material in Total Hip Replacements	266
Author Index	275
Subject Index	277
