PREFACE xi

INTRODUCTION 1

1 FUNCTIONAL ELEMENTS AND OPERATING CHARACTERISTICS 3

1-1 Functional Elements 4

1-2 Operating Characteristics 8
Digital and analog signals
Deflection and null outputs
Passive and active devices

1-3 Some Basic Instruments 11
Displacement
Velocity and acceleration
Force
Pressure
Flow
Temperature

2 ELEMENTARY STATISTICS 37

2-1 Mean Value and Standard Deviation 38

2-2 Probability 41

2-3 Combined Distributions 47

2-4 The Best-Fitting Straight Line 49
The least-squares method
Standard error of estimate and confidence level

3 THE STATIC PERFORMANCE OF INSTRUMENTS 54

3-1 Static Calibration 55
Sensitivity to other inputs
Standards

3-2 Response to a Repeated Value of Input 58

3-3 Bias and Precision 61

3-4 Presentation of Calibration Data 62
The calibration curve
Confidence limits

3-5 Static Characteristics 68
Error
Static sensitivity
Threshold and resolution
Linearity
Hysteresis

3-6 Examples of Specifications of Static Characteristics 80
Strain gages
Accelerometers

3-7 Summary 88

4 MATHEMATICAL MODELS 89

4-1 The Thermometer 91

4-2 The U-Tube Manometer 94

4-3 Mathematical Models 98

5 DYNAMIC PERFORMANCE 99

5-1 The Mathematical Model 100
Zero-order model
First-order model
Second-order model

5-2 Forcing Functions 105
Step function
Impulse function
Terminated ramp
Sinusoidal function

5-3 First-Order Dynamic Characteristics 109
Step input
Sinusoidal input
The time constant

5-4 Second-Order Dynamic Characteristics 116
The step input
Sinusoidal input

5-5 The Importance of Frequency Response 124

5-6 Dynamic Characteristics 124

5-7 Examples of Specifications of Second-Order Characteristics 126
Temperature-sensing devices
Accelerometers
Load cell
Other Specifications

6 COMPLEX INSTRUMENTS AND GENERAL INPUTS 130

6-1 Higher-Order Instruments 131
6-2 Static Response of Higher-Order Instruments 132

6-3 **Dynamic** Response of Higher-Order Instruments 135
Reduction to components
Frequency response
The logarithmic plot

6-4 Response to Other Inputs 147
Periodic, transient, and random signals
Treatment of periodic signals
Transient signals
Treatment of random signals

6-5 Summary 174

7 SELECTING AN INSTRUMENT 175

7-1 Expected Inputs 175

7-2 Acceptable Error 177

7-3 Instrument Selection 180

7-4 Other Considerations 181

8 WHERE NEXT? 182

8-1 Areas of **Interest** 182

8-2 Books 184

8-3 Periodicals 185

8-4 Manufacturers' Publications 186

8-5 Conclusion 187

APPENDIX 188

Probability Table 188

INDEX 191
