620.004 5 GRE

Contents

CHAPTER 1 RELIABILITY CONCEPTS

Introduction 1
An Historical Review 2
Some High Reliability Systems 5
Aircraft systems 5
Power plants 11
Chemical plants 14
Electrical supply systems 16
Systems in general 18
A Probabilistic Definition 21
Some Probability Concepts 26
Reliability in the Time Domain 31
Technological System Applications 36
Conclusions 43
Questions 44

CHAPTER 2 AN APPROACH TO RELIABILITY ASSESSMENT

Concept of Overall Reliability 47
Some Further Probability Concepts 50
System Reliability 57
Capability of Performance 60
Variability of Performance 62
Required Performance 72
The Overall Reliability Function 75
Questions 80

CHAPTER 3 THE PERFORMANCE REQUIREMENT

Requirement Concepts 83
Basic Requirement 86
Requirement Conditions 91
Requirer conditions 92
Space conditions 93
Time conditions 97

Input conditions . . 99
Output conditions . . 105
Overall Requirement . . 108
Requirement Limits . . 112
Financial Requirements . . 115
Requirement Variations . . 118
Questions . . 120

CHAPTER 4 THE PERFORMANCE ACHIEVEMENT
Achievement Concepts . . 122
Introduction . . 122
The interface problem . . 122
System definition . . 125
Capability and variability . . 129
Functional Capability . . 130
General concepts . . 130
Logistics . . 131
Logic . . 132
Boolean Algebra . . 136
Truth tables . . 143
Logic Diagrams . . 145
Matrix Representation of a Network . . 149
Functional Diagrams . . 152
Generalized Systems . . 155
Questions . . 158

CHAPTER 5 VARIATIONS IN THE PERFORMANCE ACHIEVEMENT
General Concepts . . 161
Achievement Variations . . 162
The Transfer Function Approach . . 165
Systematic Variations . . 169
Random Variations . 174
Continuous distributions . . 175
Discrete distributions . . 181
Combinations of continuous and discrete distributions . . 188
Achieved Performance . . 190
Questions . . 191

CHAPTER 6 THE TRANSFER CHARACTERISTIC
Transfer Characteristic Concepts . . 193
The Laplace Transform . . 194

Transforms of Particular Functions 195
Step function 195
Impulse function 197
Ramp function 198
Exponential functions 200
Transforms of Particular Operations 201
Differentiation and integration 201
Multiplication by an exponential 204
Change of variable 205
Convolution 206
Transfer Function 209
Effects of Particular Transfer Functions 216
First-order system 216
Second-order system 220
Transfer Function Algebra 225
The Transfer Matrix 229
Questions 234

CHAPTER 7 PROPERTIES OF DISTRIBUTIONS
The Distribution Function 238
Moments of Distributions . 242
The Cumulative Distribution Function . 257
Conditional Distribution Functions . 262
Hazard Distribution Functions 269
Questions . 272

CHAPTER 8 COMBINATIONS OF DISTRIBUTIONS
The Need for Combinations . 276
Sums and Differences of Distributions . 277
Products of Distributions 290
Quotients of Distributions . 296
General Combinations of Small Variations. 299
Selected Combinations of Distributions . 300
Questions . 309

CHAPTER 9 SAMPLING, ESTIMATION AND CONFIDENCE
Sampling . 313
Estimation and Confidence . 315
General concepts . 315
Sample means . 320
Sample variances . 328
Sampling from the normal distribution . 334

Sampling from the exponential distribution 340
Sampling from the Poisson distribution 346
Sampling from the binomial distribution. 350
Weighted combination of estimates 353
Goodness of Fit 359
General 359
Graphical methods 359
Analytical methods 363
Sample Testing 370
Questions 382

CHAPTER 10 RELIABILITY CONSIDERATIONS FOR SYSTEMS
Overall Concepts . . 386
The Correlation Process . . 387
Simple correlations . . 387
Multiple correlations . . 394
Dependent correlations . 397
Correlations associated with discrete states . . 402
Changes of State . . 404
Practical implications . . 404
Irreversible changes of state . . 405
Reversible changes of state . . 417
Reliability Parameters of Interest . . 424
Questions . . 425

CHAPTER 11 SYNTHESIS OF SYSTEM RELIABILITY
The Need for Synthesis . . 430
The Two-element System . . 431
Non-redundant Elements . . 432
Change of state representation . . 432
Irreversible changes of state . . 437
Reversible changes of state . . 445
System renewals . . 450
Variational aspects . . 454
Parallel Redundant Elements . . 455
Change of state representation . . 455
Irreversible changes of state . . 458
Reversible changes of state . . 465
System renewals . . 468
Variational aspects . . 469
Standby Redundant Elements . . 470

Change of state representation . . 470
Irreversible changes of state . . 471
Reversible changes of state . . 474
Variational aspects . . 478
Questions . . 478

CHAPTER 12 SYNTHESIS OF COMPLEX SYSTEMS
Types of Complex Systems . . 483
Exclusive Elements . . 484
Simple Common Elements . . 490
Cross-linked Common Elements . . 494
Majority-vote Elements . . 497
Change of state representation . . 497
Irreversible changes of state . . 502
Reversible changes of state . . 512
Variational aspects . . 516
General Procedures for Synthesis . . 516
Questions . . 522

CHAPTER 13 THE APPLICATION OF RELIABILITY ASSESSMENT
General Review . . 527
Reliability Data . . 530
General aspects . . 530
Acquisition of data . . 531
The use of data . . 535
The Mathematical Model . 541
Characteristics and type . . 541
Typical assumptions . . 544
The Perspective of Reliability Assessment . . 549

APPENDIX . . 554

ANSWERS TO QUESTIONS . . 600

LIST OF SYMBOLS . 613

GLOSSARY OF TERMS . . 622

SUGGESTED REFERENCES FOR FURTHER READING . 628

INDEX . . 631
