Chapter 1

Introduction

1.1	Background	1
1.2	The Problem-Solving Process	2
1.3	A Fundamental Concept: The Time Value of Money	4
1.4	Economic Justification May Not Be Enough	8
1.5	Overview of the Text	9

Chapter 2

Cost Concepts

2.1	Introduction	11
2.2	Cost Terminology	12
2.3	Estimation	22
2.4	Accounting Principles	30
2.5	Nonmonetary Considerations	45
	Problems	48

Chapter 3

Time Value of Money Operations

3.1	Introduction	53
3.2	Interest Calculations	53
3.3	Single Sums of Money	55
3.4	Series of Cash Flows	57
3.5	Multiple Compounding Periods in a Year	72
3.6	Continuous Compounding	75
3.7	Equivalence	80
3.8	Special Topics	86
3.9	Summary	105
	Problems	105

Chapter 4

Comparison of Alternatives

4.1	Introduction	119
4.2	Defining Mutually Exclusive Alternatives	120
4.3	Defining the Planning Period	122
4.4	Developing Cash Flow Profiles	126
4.5	Specifying the Time Value of Money	128
4.6	Specifying the Measure of Merit	130
4.7	Comparing the Investment Alternatives	144
4.8	Performing Supplementary Analyses	149
4.9	Selecting the Preferred Alternative	150
4.10	Analyzing Alternatives with No Positive Cash Flows	151
4.11	Classical Method of Dealing with Unequal Lives	155
4.12	Replacement Analysis	158
4.13	Computer Applications	167
4.14	Summary	168
	Problems	171

Chapter 5

Depreciation and Income Tax Considerations

5.1	Introduction	189
5.2	The Meaning of Depreciation	189
5.3	Factors Used to Determine Depreciation	191
5.4	Methods of Depreciation	191
5.5	Comparison of Depreciation Methods	201
5.6	Special Provisions for Accelerated Depreciation	202
5.7	Other Methods of Depreciation	202
5.8	Tax Concepts	204
5.9	Corporate Income Tax: Business Income	204
5.10	After-Tax Cash Flow	210
5.11	Effect of Depreciation Method	212
5.12	Effect of Interest on Borrowed Money	215
5.13	Carry-back and Carry-forward Rules	218
5.14	Capital Gains and Losses	218
5.15	Tax Treatment of Capital Assets	219
5.16	Recaptured Capital Cost Allowance	220
5.17	Income Tax Incentives	222
5.18	Lease-Buy Considerations	226
5.19	Depletion	229
5.20	Summary	230
		231

CONTENTS

Chapter 6

Economic Analysis of Projects in the Public Sector

6.1	Introduction	237
6.2	The Nature of Public Projects	237
6.3	Objectives in Project Evaluation	240
6.4	Benefit-Cost Analysis	241
6.5	Important Considerations in Evaluating Public Projects	250
6.6	Cost-Effectiveness Analysis	266
6.7	Summary	268
	Problems	269

Chapter 7

Break-Even, Sensitivity, and Risk Analyses

7.1	Introduction	275
7.2	Break-Even Analysis	276
7.3	Nonlinear Break-Even Analysis	280
7.4	Sensitivity Analysis	285
7.5	Risk Analysis	293
7.6	Summary	308
	Problems	309

Chapter 8

Decision Models

8.1	Introduction	317
8.2	The Matrix Decision Model	320
8.3	Decisions under Assumed Certainty	322
8.4	Decisions under Risk	324
8.5	Decisions under Uncertainty	329
8.6	Sequential Decisions	335
8.7	Multiple Objectives	359
8.8	Summary	367
	Problems	369

Chapter 9

Fundamental Economic Concepts

9.1	Introduction	379
9.2	Supply and Demand	379
9.3	Production	397
9.4	Summary	409
	Problems	409

Appendix A Discrete Compounding	413
Appendix B Continuous Compounding	437
Appendix C Answers to Even-Numbered Problems	469
Glossary of Technical Terms Used in Engineering Economics	477
Index	489
