CHAPTER	PAGE
1. INTRODUCTION	1
2. ELEMENTS OF PROBABILITY	5
2.1 Repetitive operations and sample spaces .	5
2.2 Events .	6
2.3 Probability .	9
2.4 Conditional probability .	13
2.5 Permutations and combinations .	15
2.6 Random variables .	19
2.7 Randomization and random numbers .	20
<i>Problems</i> .	23
3. SOME IMPORTANT DISCRETE DISTRIBUTIONS	27
3.1 The hypergeometric distribution .	27
3.2 The binomial distribution. .	30
3.3 The Poisson distribution .	32
3.4 The multinomial distribution .	35
3.5 Some derivations and proofs .	36
<i>Problems</i> .	38

4.	ACCEPTANCE SAMPLING	40
4.1	Introduction	40
4.2	Approximation for $P(A \theta)$ and $p(x \theta)$ for large lots and small values of θ	43
4.3	Average outgoing quality	45
4.4	Producer's and consumer's risks	48
4.5	Double sampling	49
	<i>Problems</i>	54
5.	DESCRIPTION OF A SAMPLE OF MEASUREMENTS	57
5.1	Graphical description of a sample of measurements	57
5.2	Frequency tables, frequency distributions, and cumulative polygons	59
5.3	Mean and standard deviation of a sample of measurements	62
5.4	The mean and standard deviation of a sample of approximated measurements	66
	<i>Problems</i>	70
6.	PROBABILITY DISTRIBUTIONS	78
6.1	Graphical description of discrete random variables	78
6.2	Mean and variance of a discrete random variable	80
6.3	Continuous random variables	81
6.4	Mean and variance of continuous random variables	83
6.5	Mean values of more general functions of random variables	84
6.6	Chebychev's inequality	85
6.7	Distribution functions of two random variables	87
6.8	Extension to several random variables	92
6.9	Random sampling	93
6.10	The moment generating function	99
6.11	Some proofs and derivations	101
	<i>Problems</i>	104
7.	THE NORMAL DISTRIBUTION	109
7.1	Definition and properties	109
7.2	The standard normal distribution	111

CONTENTS

xi

7.3	Approximation of the binomial distribution by the normal distribution .	115
7.4	Mean and variance of linear functions of independent normal random variables .	117
7.5	Normal probability paper .	120
	<i>Problems</i> .	122
8.	ACCEPTANCE SAMPLING PLANS BASED ON SAMPLE MEANS AND SAMPLE VARIANCES	125
8.1	Review of acceptance sampling concepts in attribute sampling .	125
8.2	One-sided acceptance sampling plans based on sample means	126
8.3	Generalization .	129
8.4	Two-sided acceptance sampling plans based on sample means	129
8.5	Acceptance sampling plans based on the sample variance s^2 .	132
	<i>Problems</i> .	133
9.	ESTIMATION OF POPULATION PARAMETERS	137
9.1	Introduction	137
9.2	Point estimators for the population mean and variance .	138
9.3	Interval estimators for the mean of a normal population .	139
9.4	Interval estimators for the difference of means of two normal populations .	141
9.5	Interval estimators for the variance of a normal population .	144
9.6	Interval estimator for the ratio of variances of two normal populations .	145
9.7	Estimation by the method of maximum likelihood .	146
9.8	Point and interval estimators for the binomial parameter .	148
9.9	Some derivations and proofs .	150
	<i>Problems</i> .	151
10.	STATISTICAL TESTS	155
10.1	Introduction .	155
10.2	Tests concerning the mean of a normal distribution having known variance .	155

10.3	Tests concerning the mean of a normal population having unknown variance .	161
10.4	Tests concerning the difference of means of two normal populations having known variances	165
10.5	Tests concerning the difference of means of two normal distributions having equal but unknown variances	168
10.6	Tests concerning the variance of a normal distribution .	170
10.7	Tests concerning the ratio of variances of two normal distributions	171
10.8	Sequential tests of hypotheses	173
	<i>Problems</i>	177
11.	CONTROL CHARTS	183
11.1	Introduction	183
11.2	Theoretical control charts for surveillance in the case of an existing state of statistical control with known parameters	184
11.3	Empirical control charts for the case in which a state of statistical control does not yet exist	190
	<i>Problems</i>	192
12.	CHI-SQUARE GOODNESS OF FIT TESTS	197
12.1	Goodness of fit	197
12.2	Contingency Tables	202
	<i>Problems</i>	205
13.	ORDER STATISTICS	210
13.1	Introductory remarks	210
13.2	Distribution of the largest element in a sample	211
13.3	Distribution of the smallest element in a sample	213
13.4	Distribution of the median of a sample and of the kth order statistic	214
13.5	Distribution of the range of a sample	216
13.6	Distribution-free tolerance limits	218
13.7	Other uses of order statistics	222
	<i>Problems</i>	224

14.	NONPARAMETRIC TESTS	227
14.1	The sign test	227
14.2	The Mann-Whitney (Wilcoxon) W test for two samples	231
14.3	Run tests	232
	<i>Problems</i>	237
15.	REGRESSION ANALYSIS	241
15.1	Introduction	241
15.2	Fitting a straight line by least squares	243
15.3	Estimation of σ^2	247
15.4	Confidence intervals for α , β , and η_0	249
15.5	An example	249
15.6	Extension to more general regression problems	253
15.7	Linear regression problems involving two or more independent variables	254
	<i>Problems</i>	257
16.	ANALYSIS OF VARIANCE	260
16.1	Introduction	260
16.2	One-way experimental layouts	260
16.3	Two-way experimental layouts	266
16.4	Latin square layouts	279
	<i>Problems</i>	284

APPENDICES

I	Unity of the area under the normal probability density function	291
II	The moment generating function of the normal distribution	292
III	The normal bivariate distribution	294
IV	The Central Limit Theorem	295
V	Algebraic proofs of some least squares formulas.	297
VI	Sampling from a normal distribution	299

VII	TABLES	309
I	5000 random digits .	311
II	Values of the standardized normal distribution function $\Phi(z)$.	314
III	Percentage points of the χ_m^2 distribution .	316
IV	Values of the function $g = \frac{1}{2} \ln \frac{1+r}{1-r}$.	318
V	Percentage points of the t_m distribution .	319
VI	Percentage points of the F_{m_1, m_2} distribution .	321
VII	Values of e^{-x} .	330
VIII	CHARTS	331
I	The 95% confidence limits for the population correlation coefficient ρ , given the sample correlation coefficient r .	332
II	The 99% confidence limits for the population correlation coefficient ρ , given the sample correlation r .	333
III	The 95% confidence limits for the binomial parameter θ , given the sample proportion T/n .	334
