

**CONTENTS**

1. Introduction	1-1
2. Physical Properties of noise and Their Specification	2-1
3. Propagation of sound in the Open air	3-1
4. The Hearing Mechanism	4-1
5. The Loudness of Sounds	5-1
6. Audiometric Testing in Industry	6-1
7. Hearing Loss Resulting From Noise Exposure	7-1
8. Ear Protectors	8-1
9. Effects of Noise on Speech	9-1
10. Effects of noise on Behavior	10-1
11. Effects of Vibration on Man	11-1
12. Principles of Vibration Control	12-1
13. Vibration Isolation	13-1
14. Vibration Damping	14-1
15. Vibration Measurement	15-1
16. Instruments for Noise Measurements	16-1
17. Noise Measuring Techniques	17-1
18. Acoustical Materials	18-1
19. Control of Solid-Borne Noise in Buildings	19-1
20. Transmission of Air-Borne Noise Through Walls and Floors Richard	20-1
21. Acoustical Filters and mufflers	21-1
22. System Considerations in Noise Control Problems	22-1
23. Gear Noise	23-1
24. Bearing Noise	24-1
25. Fan Noise	25-1
26. Noise in Water and Steam Systems	26-1
27. Heating and Ventilating System Noise	27-1
28. Compressor, Household-Refrigerator, and Room Aircondi Tioner Noise	28-1
29. Reduction of the Noise of Iron-Core Transformers and Chokes Arthur	29-1
30. Electric Motor and Generator Noise	30-1
31. Automobile Noise	31-1
32. Noise in rail Transportation	32-1
33. Aircraft Noise Sources	33-1
34. Aircraft Noise Control	34-1
35. Community noise and City Planning	35-1

36. Community Reaction to Noise	36-1
37. Legal Aspects of the Aircraft Noise Problem	37-1
38. Legal Liability for Loss of Hearing	38-1
39. Anti-Noise Ordinances	39-1
40. Noise Control Requirements in building Codes	40-1
Index
