Preface xiii

Chapter 15 Kinematics of Particles 473

15.1 Introduction 473
15.2 General Rectilinear Motion 474
15.3 Graphical Interpretation of Displacement, Velocity, and Acceleration Diagrams for Rectilinear Motion 477
15.4 Rectilinear Motion with Constant Acceleration 484
15.5 Plane Curvilinear Motion—Normal and Tangential Components 490
15.6 Plane Curvilinear Translation—Rectangular Components 495
15.7 Plane Projectile Motion in Terms of Component Motions 499
15.8 Relative Displacement, Velocity, and Acceleration 503
15.9 Summary 509
Problems 511

Chapter 16 Dynamics of Particles 528

16.1 Introduction—Newton's Second Law 528
16.2 Units 530
16.3 Dynamics of a Particle in Rectilinear Translation 531
16.4 Dynamics of Connected Particles in Rectilinear Translation 535
16.5 Dynamics of a Particle in Plane Curvilinear Motion—Normal and Tangential Components 538
16.6 The D'Alembert, or Inertia, Force 547
16.7 Summary 549
Problems 551

Chapter 17 Kinematics of Plane Motion of a Rigid Body 562

17.1 Introduction 562
17.2 Rectilinear, and Plane Curvilinear, Translation of a Rigid Body 563
17.3 Rotation of a Rigid Body about a Fixed Axis 565
17.4 Graphical Interpretation of Angular Displacement, Velocity and Acceleration Diagrams 567
17.5 Rotation, with Constant Acceleration, of a Rigid Body about a Fixed Axis 569
17.6 Relation between Translational and Rotational Motion 572
17.7 Relation between Translational and Rotational Motion of Connected Bodies 574
17.8 General Plane Motion of a Rigid Body 576
17.9 Instant Center of Rotation 579
17.10 Pure Rolling of Rigid Bodies 582
17.11 Summary 584
Problems 586

Chapter 18 Centroids, and Mass Moments of Inertia, of Rigid Bodies 597

18.1 Introduction 597
18.2 Centroids of Volumes 599
18.3 Center of Mass of a Rigid Body 603
18.4 Centroid of a Composite Homogeneous Rigid Body 605
18.5 Mass Moment of Inertia of a Homogeneous Rigid Body 608
18.6 Parallel-Axis, or Transfer, Theorem for Mass Moments of Inertia 611
18.7 Radius of Gyration 615
18.8 Mass Moments of Inertia of Homogeneous Thin Plane Rigid Bodies 615
18.9 Relation between Moments of Inertia of a Plane Area and Mass Moments of Inertia of a Homogeneous Thin Plane Rigid Body 618
18.10 Mass Moments of Inertia of Composite Homogeneous Rigid Bodies 621
18.11 Computation of Mass Moments of Inertia Using the Transfer Theorem and a Single Integration 626
18.12 Center of Mass, and Mass Moment of Inertia, of Plane Bodies Formed of Thin Rod Shapes 629
18.13 Summary 632
Problems 640

Chapter 19 Dynamics of Rigid Bodies in Plane Motion 666

19.1 Introduction 655
19.2 Dynamic Motion of a Rigid Body about a Fixed Point 657

19.3 Dynamic Motion Described by Translation of the Center of Mass, and Rotation about This Point 661
19.4 Pure Rolling of a Cylindrical Body 670
19.5 Dynamic Motion of Connected Rigid Bodies 675
19.6 Solutions Using the D'Alembert, or Inertia, Forces and Moments 678
19.7 Criteria for Sliding or Tipping 685
19.8 Center of Percussion 688
19.9 Summary 690
Problems 691

Chapter 20 Work-Energy Methods for Particles and Rigid Bodies 708

20.1 Introduction 709
20.2 Work of a Force 710
20.3 Work of a Couple, Moment, or Torque 713
20.4 Energy Due to Position—Potential Energy of a Particle 714
20.5 Energy Due to Motion—Kinetic Energy of a Particle 717
20.6 Conservation of Energy—The Work-Energy Method for a Particle 719
20.7 Potential Energy of a Rigid Body in Plane Motion 724
20.8 Kinetic Energy of a Rigid Body in Plane Motion 724
20.9 Conservation of Energy—The Work-Energy Method for a Rigid Body in Plane Motion 726
20.10 The Work-Energy Method for Connected Bodies 729
20.11 The Work-Energy Method Used to Find the Value of the Normal Acceleration of a Particle 731
20.12 Work or Energy per Unit Time—Power 735
20.13 Summary 741
Problems 743

Chapter 21 Impulse-Momentum Methods for Particles and Rigid Bodies 758

21.1 Introduction 758
21.2 Impulse of a Force and Linear Momentum of a Particle 760
21.3 Impulse of a Constant Force 762
21.4 Impact 763
21.5 Conservation of Linear Momentum 765
21.6 Coefficient of Restitution 767
21.7 Direct and Oblique, Central Impact 774
21.8 Impulsive Forces 777
21.9 Angular Momentum of a Rigid Body in Plane Motion 778
21.10 Impulse-Momentum Equation for Rigid Bodies in Plane Motion 778

19.3 Dynamic Motion Described by Translation of the Center of Mass, and Rotation about This Point 661
19.4 Pure Rolling of a Cylindrical Body 670
19.5 Dynamic Motion of Connected Rigid Bodies 675
19.6 Solutions Using the D'Alembert, or Inertia, Forces and Moments 678
19.7 Criteria for Sliding or Tipping 685
19.8 Center of Percussion 688
19.9 Summary 690
Problems 691

Chapter 20 Work-Energy Methods for Particles and Rigid Bodies 709

20.1 Introduction 709
20.2 Work of a Force 710
20.3 Work of a Couple, Moment, or Torque 713
20.4 Energy Due to Position—Potential Energy of a Particle 714
20.5 Energy Due to Motion—Kinetic Energy of a Particle 717
20.6 Conservation of Energy—The Work-Energy Method for a Particle 719
20.7 Potential Energy of a Rigid Body in Plane Motion 724
20.8 Kinetic Energy of a Rigid Body in Plane Motion 724
20.9 Conservation of Energy—The Work-Energy Method for a Rigid Body in Plane Motion 726
20.10 The Work-Energy Method for Connected Bodies 729
20.11 The Work-Energy Method Used to Find the Value of the Normal Acceleration of a Particle 731
20.12 Work or Energy per Unit Time—Power 735
20.13 Summary 741
Problems 743

Chapter 21 Impulse-Momentum Methods for Particles and Rigid Bodies 758

21.1 Introduction 758
21.2 Impulse of a Force and Linear Momentum of a Particle 760
21.3 Impulse of a Constant Force 762
21.4 Impact 763
21.5 Conservation of Linear Momentum 765
21.6 Coefficient of Restitution 767
21.7 Direct and Oblique, Central Impact 774
21.8 Impulsive Forces 777
21.9 Angular Momentum of a Rigid Body in Plane Motion 778
21.10 Impulse-Momentum Equation for Rigid Bodies in Plane Motion 778

21.11 Impact of Rigid Bodies in Plane Motion 780
21.12 Summary 788
Problems 790

Chapter 22 Dynamics of Rigid Bodies in Three Dimensional Motion—Dynamic Unbalance and Gyroscopic Moments 804

22.1 Introduction 804
22.2 Review of the D'Alembert, or Inertia, Force 806
22.3 Dynamic Forces Caused by Rotating Off-Center Point Masses—Solution by Direct Use of Inertia Forces 807
22.4 Dynamic Forces Caused by Rotating OK-Center Slender Bodies—Solution by Integration of the Inertia Forces Acting on the Mass Elements 811
22.5 Mass Product of Inertia of Thin Plane Bodies 815
22.6 Dynamic Forces Caused by Rotating Unbalance—General Solution for Unbalanced Bodies of Arbitrary Shape 819
22.7 Independence of Dynamic Forces and Angular Acceleration of Rotating Unbalanced Bodies 828
22.8 Dynamic Balancing of Rotors 829
22.9 Critical Speed of a Shaft with an Unbalanced Rotor 832
22.10 Derivative of a Vector with Constant Magnitude and Changing Direction 835
22.11 Moment Effects Due to Change in Direction of an Axis of Rotation—The Gyroscopic Moment 836
22.12 Summary 839
Problems 840

Chapter 23 Mechanical Vibration with One Degree of Freedom 851

23.1 Introduction 851
23.2 Natural Frequency of Undamped Free Vibration 851
23.3 Natural Frequency of Undamped Free Vibration of a Rotational System with Small Angular Displacements 859
23.4 Undamped Forced Vibration 861
23.5 Natural Frequency of Free Vibration with Viscous Damping 863
23.6 The Logarithmic Decrement 867
23.7 Forced Vibration with Viscous Damping 868
23.8 Summary 876
Problems 879

Chapter 24 Rectilinear Motion of a Body with Resisting, or Drag, Forces **887**

24.1 Introduction 887
24.2 Constant Drag Force 888
24.3 Drag Force directly Proportional to Velocity—Linear Resistance Law 889
24.4 Drag Force Proportional to Velocity Squared—Quadratic Resistance Law 894
24.5 Quadratic Resistance Law—Applied Constant Force with Same Sense as Velocity 898
24.6 Quadratic Resistance Law—Applied Constant Force with Sense Opposite that of Velocity 902
24.7 Summary 907
Problems 908

Appendix **913**
List of Symbols **914**
Index **917**
Answers to Odd-Numbered Problems **921**
