

CONTENTS

Preface	xiii
Chapter 1 THE APPROACH TO STUDY	1
1.1 Introduction	2
1.2 The Way of Solution	5
1.2.1 Amount of interference	6
1.2.2 Reduction of rolling force	7
1.3 The Approach to Study	9
References	10
Questions	11
Problems	11
Chapter 2 BASIC ASSUMPTIONS	13
2.1 Scale of Analysis	14
2.2 Basic Assumptions in Elementary Solid Mechanics	16
2.2.1 Continuity	16
2.2.2 Homogeneity and isotropy	17
2.2.3 Small deformation	18
2.2.4 Absence of initial stresses	18
References	19
Important Concepts	19
Questions	19
Problems	20

Chapter 3 STRESS	22
3.1 Forces	23
3.1.1 Type of forces	23
3.1.2 Internal forces	23
3.1.3 External forces	24
3.2 Stress	26
3.2.1 Mathematical definition	26
3.2.2 Physical definition	27
3.3 Commonly Used Notations for Stresses	27
3.4 Sign of Stresses	31
3.4.1 The positive direction of normal stresses	31
3.4.2 The positive direction of shear stresses	32
3.5 Symmetry of Stress Matrix	33
3.6 Stress Transformation	35
3.6.1 Stress in any direction: two-dimensional stress states	36
3.6.2 Stresses with coordinate axis rotation	38
3.6.3 Principal stresses and maximum shear stress	39
3.6.4 Principal stresses as eigenvalues of the stress matrix	43
3.6.5 Stress in any direction: three-dimensional stress states	45
3.6.6 Principal stresses in three dimensions	48
3.6.7 Maximum shear stress in three dimensions	51
3.7 Equations of Motion and Equilibrium	54
References	59
Important Concepts	59
Questions	60
Problems	60
Chapter 4 DISPLACEMENT AND STRAIN	65
4.1 Displacement	66
4.2 Strain	67
4.3 Strain-Displacement Relations under Small Deformation	68
4.4 Principal Strains and Their Directions	73

4.5 Compatibility of Strains	75
References	79
Important Concepts	80
Questions	80
Problems	81
Chapter 5 STRESS-STRAIN RELATIONSHIP	86
5.1 Mechanism of Stress-Strain Behaviour	87
5.2 Generalised Hooke's Law	89
5.3 Physical Indications of Elastic Constants	98
5.3.1 Young's modulus E	99
5.3.2 Poisson's ratio ν	100
5.3.3 Shear modulus G	101
5.3.4 Bulk modulus K	101
5.4 Effect of Temperature Change	106
5.5 Deformation beyond Elasticity	109
References	109
Important Concepts	110
Questions	110
Problems	110
Chapter 6 MODELLING AND SOLUTION	114
6.1 Difficulties	115
6.2 Mechanics Modelling	115
6.2.1 Displacement and stress boundary conditions	115
6.2.2 Mixed boundary conditions	120
6.2.3 Understanding of special deformation characteristics	122
6.2.3.1 Symmetry of deformation	122
6.2.3.2 Plane-stress deformation	128
6.2.3.3 Plane-strain deformation	130
6.2.3.4 Similarity and difference in plane-stress and plane-strain	131
6.2.4 Use of the principle of superposition	133

6.3 Solution Approaches and Skills	135
6.3.1 Approaches	135
6.3.2 Solution skills	137
6.3.2.1 A cylinder under inner and outer pressure: displacement approach	138
6.3.2.2 A rotating disk under outer Pressure: mixed approach	145
6.3.2.3 A uniform bar under gravity: stress approach	153
6.4 Saint-Venant's Principle	158
References	162
Important Concepts	163
Questions	163
Problems	164
Chapter 7 APPLICATIONS	169
7.1 Torsion of a Circular Shaft	170
7.1.1 Modelling and solution	170
7.1.2 Analysis of the solution	173
7.2 Beam Bending	175
7.2.1 Modelling and solution	175
7.2.2 Discussion	180
7.3 Thermal Stress Analysis	181
7.3.1 A general method for thermal deformation analysis	182
7.3.2 Thermal fit of a hollow disk onto a shaft	184
7.4 Stress and Deformation Due to Contact	188
7.4.1 A half-space under a normal concentrated load	192
7.4.2 A half-space under a tangential concentrated load	195
7.4.3 A half-space under a local uniform pressure	197
7.4.4 Elastic bodies in contact	200
References	202
Important Concepts	203
Questions	203
Problems	204

Chapter 8 STRESS FUNCTION METHOD	209
8.1 Introduction	210
8.2 Airy Stress Function	210
8.3 A Rectangular Plate under Pure Bending	217
8.4 Plate Bending under a Concentrated Shear Force	218
8.5 Stress Concentration around a Circular Hole	223
8.5.1 Modelling and solution	223
8.5.2 Analysis of the solution	225
8.5.3 Alternative methods of solution	227
8.6 Pure Bending of a Curved Beam	230
8.7 Effect of Body Forces	232
8.8 Another Scalar Method	232
References	233
Important Concepts	233
Questions	233
Problems	234
Chapter 9 PLASTICITY AND FAILURE	237
9.1 Introduction	238
9.2 Octahedral Shear Stress	239
9.3 Distortion Energy	240
9.4 Onset of Plasticity and Deformation after Initial Yielding	241
9.4.1 Plasticity under simple tension	241
9.4.2 Plasticity under complex stress states	248
9.4.2.1 Initial yielding: yield criterion	248
9.4.2.2 Tresca criterion	249
9.4.2.3 von Mises criterion	250
9.4.3 Experimental verification	253
9.4.3.1 Lode's test	253
9.4.3.2 Test by Taylor and Quinney	254
9.4.4 Some remarks	256

9.5 Failure Theories	268
9.5.1 Ductile materials	269
9.5.1.1 The maximum shear stress theory	269
9.5.1.2 The maximum distortion energy theory	269
9.5.2 Brittle materials	270
9.5.2.1 The maximum normal stress theory	270
9.5.2.2 The maximum normal strain theory	271
9.5.3 The Mohr theory	271
References	273
Important Concepts	275
Questions	275
Problems	275

Chapter 10 AN INTRODUCTION TO THE FINITE ELEMENT METHOD

10.1 Introduction	281
10.2 Fundamentals	281
10.2.1 Introductory examples	281
10.2.2 Types of elements	283
10.2.3 Control volume	285
10.3 Formulation in the Finite Element Method	286
10.3.1 Problem description	286
10.3.2 Finite element solution	288
10.4 Usual Procedures of the Finite Element Solution	296
10.5 Some Considerations in Finite Element Modelling	298
10.6 A Case Study	301
10.6.1 Background of the problem	301
10.6.2 Modelling	302
10.6.3 Solution	306
10.6.4 Results and analysis	308
10.6.5 Summary	309
References	309
Important Concepts	310

Questions	311
Problems	311
Appendix A MOHR'S CIRCLE	315
Appendix B FORMULAE FOR SPECIAL CONTACT PROBLEMS	319
B.1 Two Balls in Contact	319
B.2 A Sphere in Contact with a Flat Half-Space	320
B.3 A Sphere in contact with a Large Concave Spherical Surface	321
B.4 The Contact of Two Cylinders with Parallel Axes	321
B.5 A Cylinder in Contact with a Flat Half-Space	322
B.6 The contact of a Cylinder with a Large Concave Cylindrical Surface	323
B.7 The Contact of Two Cylinders with Perpendicular Axes	232
Appendix C THE THEOREM OF MINIMUM POTENTIAL ENERGY	325
Appendix D UNITS AND CONVERSION FACTORS	328
Index	331
