CONTENTS

1 INTRODUCTION, 1

1 Scope of the Book, 1

2 Basis for Electron Microscopy of Materials, 4

2.1 Wavelength and Resolution, 4

2.2 Diffraction, 13

2.3 Specimen Limitations, 14

3 The Transmission Electron Microscope, 16

3.1 Components of the TEM, 16

Electron Lenses, Depths of Field and Focus, Resolution

3.2 Operating Functions of the TEM, 23

4 Practical Operation of the TEM, 24

4.1 Selected Area Diffraction, 24

4.2 Calibration of Rotation and Inversions, 28

4.3 Magnification Calibrations, 31

4.4 Camera Constant, 33

4.5 Contamination, 33

4.6 The Dark Field Technique, 34

4.7 High Resolution Techniques for the Study of Lattice Defects, 36

Weak Beam Method: Dark Field Imaging, High Order Reflection Method: Bright Field Imaging

4.8 Lattice Imaging, 40

Preliminaries, Image Formation: Procedures

4.9 Convergent Beam Diffraction, 45

4.10 Stereoscopic Techniques, 47

5 The Scanning Transmission Electron Microscope, 50
5.1 Basic Features of Electron Scanning Systems, 50
5.2 Imaging in the STEM, 52
5.3 Microdiffraction in the STEM, 55
5.4 Microanalysis in the STEM, 56
6 Optical Diffraction and Electron Microscopy, 60
7 Specimen Preparation, 65
8 Bibliography, 66
Exercises, 67
References, 69

2 GEOMETRY OF ELECTRON DIFFRACTION, 72

1 Bragg's Law and the Reciprocal Lattice, 72
1.1 Geometry, 72
1.2 The Structure Factor, 74
2 Indexing Diffraction Patterns, 77
2.1 Assignment of Indices, 77
2.2 Curvature of the Reflecting Sphere, 80
3 The Shape of Reciprocal Lattice Points and the Occurrence of Diffraction Spots, 80
3.1 The Crystal Shape Factor, 80
3.2 Beam Divergence or Convergence, 86
3.3 Primary Extinction, 86
4 Information from Diffraction Spot Patterns, 87
4.1 Double Diffraction, 88
4.2 Moiré Patterns, 90
4.3 Faulted Crystals, 92
4.4 Twin Patterns, 94
4.5 Sidebands–Modulated Structures, 100
4.6 Mixed Patterns–Identification of Phases, 103
4.7 Patterns from Ordered Crystals, 105
4.8 Surface Contamination Effects, 108
4.9 Ring Patterns, 110
5 Information from Kikuchi Patterns, 112
5.1 Geometry of Formation, 112
5.2 Relationship to Spot Patterns and Determination of Deviation Parameters, 117

5.3 The Precise Determination of Orientations, 118
5.4 Kikuchi Maps, 120
5.5 Some Applications of Kikuchi Patterns, 124
Structure Analysis, Contrast Work, Stereomicroscopy, Measurements from Intensity Distributions, Calibration of Electron Wavelength (and Accelerating Voltage), Phase Transformations, Grain Boundaries, Critical Voltage Measurements
Exercises, 132
References, 137

3 INTRODUCTION TO CONTRAST ANALYSIS AND ITS APPLICATIONS, 139

Preliminary Remarks, 139

Amplitude Contrast Imaging, 141

1 Introduction, 141
2 Kinemetical Approximation–Perfect Crystals, 141
3 Contrast in Imperfect Crystals, 142
3.1 General Comments, 142
3.2 Information Requirements for Analysis (Two-Beam Conditions), 143
Precise Orientation, Sign of s, Foil Thickness
4 Visibility of Lattice Defects: General Criteria, 145
5 Burgers Vector Analysis, 149
5.1 Perfect Dislocations, 153
5.2 Imperfect Dislocations, 153
6 Magnitude of $\mathbf{g} \cdot \mathbf{b}$, 156
7 Image Position, 156
7.1 Dislocation Pairs, 158
7.2 Loops, 159
8 Planar Defects, 160
8.1 Stacking Faults, 160
Determination of Type of Stacking Fault, Overlapping Faults
8.2 Orientation Faults, 168
8.3 Antiphase Boundaries in Ordered Alloys, 169
8.4 Inversion Boundaries in Enantiomorphic Systems, 171
8.5 Additional Effects, 172
9 Small Volume Defects–Precipitates, 172

10 Many-Beam Effects and Contrast at High Voltages, 177
10.1 Dislocation Contrast, 177
10.2 Stacking Fault Contrast, 181
11 Microscopy of Magnetic Materials, 185
11.1 Lorentz Microscopy and Its Applications, 185
11.2 Structural Effects, 190

Phase Contrast Imaging, 191

12 Lattice and Structure Imaging, 192
12.1 Examples of Lattice Imaging, 192
Early Developments, Ordering Reactions, Interfaces and Boundaries, Amorphous Materials
12.2 Examples of Structure Imaging, 203
Complex Oxides, Grain Boundaries in Semiconductors, Analysis of Polytypes
13 Compositional Analysis by Lattice Imaging, 208
13.1 Introduction, 208
13.2 Some Applications, 210
Spinodal Decomposition in Au-Ni, Grain Boundaries, Martensitic Interfaces
13.3 Limits of Applicability, 216
Exercises, 217
References, 219

4 THEORY OF DIFFRACTION CONTRAST, 223

1 Introduction, 223
2 A Simplified General Theory, 224
2.1 Neglect of Back Reflection, 224
2.2 The Phase Grating Approximation, 225
2.3 The Kinematical Approximation, 226
2.4 The Two-Beam Dynamical Approximation, 230
2.5 The Column Approximation, 231
3 Two-Beam Analytical Solution for Perfect Crystals, 232
4 Further Development of the Theory, 240
4.1 Beams and Bloch Waves, 240
4.2 Dispersion Surfaces, 242
4.3 Bloch Waves and Absorption, 244
4.4 Extension of Formulation to Many Beams, 246

7.3 Images at Critical Voltages, 310
7.4 Comparison of Methods, 311
8 General Symmetry Principles, 311
9 Images Formed by More than One Beam, 314
9.1 Effects of Lens Aberrations: Contrast Transfer Functions, 315
9.2 Moiré Fringes, 321
9.3 Lattice Plane Images, 322
9.4 Crystal Structure Projections, 322
9.5 Multibeam Images at High Voltages, 323
10 Scanning Transmission Electron Microscopy, 324
Exercises, 325
References, 326

APPENDIX A
PREPARATION OF THIN FOILS FOR TEM FROM BULK SAMPLES, 329

APPENDIX B
THE FOUR-AXIS HEXAGONAL RECIPROCAL LATTICE, 340

APPENDIX C
RELATIVE RECIPROCAL LATTICE SPACINGS, 348

SOLUTIONS TO EXERCISES, 351

INDEX, 385
