Chapter 1	Chemical Resistant Mortars, Grouts, and Monolithic Surfacing	1
1.1	Introduction	1
1.2	Materials Selection	3
1.3	Chemical-Resistant Mortars and Grouts	3
1.3.1	Organic	4
1.3.1.1	Epoxy	4
1.3.1.2	Furans	7
1.3.1.3	Phenolics	9
1.3.1.4	Polyesters	10
1.3.1.5	Vinyl Ester and Vinyl Ester Novolac	12
1.3.2	Inorganic	13
1.3.2.1	Sulfur	14
1.3.2.2	Silicates	15
1.4	Chemical-Resistant Monolithic Surfacing and Polymer Concretes	16
1.4.1	Chemical Resistance	37
1.4.2	Applications	40
Chapter 2	Cathodic Protection	43
2.1	Introduction	43
2.2	Background	43
2.3	Theory	44
2.4	Method of Application	46
2.4.1	Impressed Current Systems	46
2.4.1.1	Current Requirements	47
2.4.2	Sacrificial Anodes	47
2.4.2.1	Anode Requirements	48
2.4.2.2	Anode Materials and Backfill	50
2.5	Use with Coatings	51
2.6	Testing for Completeness of Protection	52
2.6.1	Coupon Tests	52
2.6.2	Colormetric Tests	52
2.6.3	Potential Measurements	52
2.7	Overprotection	53
2.8	Economics	53
Chapter 3	Corrosion Inhibitors	55
3.1	Introduction	55

Chapter 6 Sheet Linings

6.1 A Shell Design
6.2 Considerations in Liner Selection
6.3 Design Considerations
6.3.1 Permeation
6.3.2 Absorption
6.3.3 Environmental Stress Cracking
6.4 Causes of Lining Failure.....
6.4.1 Liner Selection.....
6.4.2 Inadequate Surface Preparation
6.4.3 Thermal Stresses
6.4.4 Permeation
6.4.5 Absorption
6.4.6 Welding Flaws
6.4.7 Debonding.....
6.4.8 Operation.....
6.5 Elastomeric Linings.....
6.5.1 Natural Rubber.....
6.5.1.1 Soft Natural Rubber.....
6.5.1.2 Multiply Natural Rubber.....
6.5.1.3 Semihard Natural Rubber.....
6.5.1.4 Hard Natural Rubber.....
6.5.2 Isoprene
6.5.3 Neoprene
6.5.4 Butyl Rubber.....
6.5.5 Chlorosulfonated Polyethylene.....
6.5.6 Urethane Rubbers.....
6.5.7 Polyester Elastomer.....
6.5.8 Chlorobutyl Rubber.....
6.5.9 Ethylene Propylene Rubber.....
6.5.10 Nitrile Rubber (NBR).....
6.5.11 Fluoroelastomers.....
6.6 Thermoplastic Linings
