Preface	ix
Foreword	xi
Chapter 1. INTRODUCTION	1
Definitions and nomenclature	2
Foreign nomenclature	3
Fretting corrosion and other forms of wear	4
Diagnosis of fretting	5
The effects of fretting	5
Chapter 2. THEORETICAL ASPECTS OF CONTACT	6
Nomenclature	6
Introduction	6
The relation between real area of contact and normal load	8
Application of a tangential force to contacting surfaces	13
Conclusion	18
Chapter 3. EXPERIMENTAL METHODS OF INVESTIGATING SURFACES	
AND CONTACTS	19
Methods of measuring surface topology	19
Methods of measuring the area of real contact	26
Chapter 4. PRACTICAL CASES OF INCIDENCE OF FRETTING DAMAGE	36
Bearings	37
Couplings	37
Riveted and pin joints	43
Shrink and press fits	46
Wire ropes	48
Nuclear reactors	50
Surgical implants	56
Heat exchangers	59
Transport of metal sheet and containers	59
Electrical contacts	60

CONTENTS

Chapter 5. EXPERIMENTAL STUDIES OF FRETTING CORROSION	63
Chapter 6. CHARACTERISTICS OF FRETTING DAMAGE	81
Particle size and shape of the debris	81
Composition of the debris	83
Appearance of the scars	88
Coefficient of friction	93
Electrical resistance	98
Changes in surface hardness	102
Chapter 7. Effect of Variables on Fretting Wear	106
Quantitative assessment of fretting damage	106
Number of cycles	100
Normal load	110
	111
Amplitude of slip	
Frequency of vibration	115
Combined effects of mechanical variables on fretting damage	115
Temperature	116
Hardness	119
Surface finish	122
Atmosphere	124
Lubricants	127
Chapter 8. Fretting and Fatigue	130
Characteristics of fretting fatigue	
Characteristics of ficturing fatigue	130
	130 134
Experimental observations The notch effect	
Experimental observations The notch effect	134
Experimental observations The notch effect The fretting fatigue curve	134 135 137
Experimental observations The notch effect The fretting fatigue curve Clamping load	134 135
Experimental observations The notch effect The fretting fatigue curve Clamping load Amplitude of slip	134 135 137 137 141
Experimental observations The notch effect The fretting fatigue curve Clamping load Amplitude of slip Frequency	134 135 137 137 141 145
Experimental observations The notch effect The fretting fatigue curve Clamping load Amplitude of slip Frequency Fretting fatigue and tensile strength	134 135 137 137 141 145 147
Experimental observations The notch effect The fretting fatigue curve Clamping load Amplitude of slip Frequency Fretting fatigue and tensile strength Direction of slip	134 135 137 137 141 145 147 149
Experimental observations The notch effect The fretting fatigue curve Clamping load Amplitude of slip Frequency Fretting fatigue and tensile strength Direction of slip Atmosphere	134 135 137 137 141 145 147 149 150
Experimental observations The notch effect The fretting fatigue curve Clamping load Amplitude of slip Frequency Fretting fatigue and tensile strength Direction of slip Atmosphere Hardness	134 135 137 137 141 145 147 149 150 151
Experimental observations The notch effect The fretting fatigue curve Clamping load Amplitude of slip Frequency Fretting fatigue and tensile strength Direction of slip Atmosphere Hardness Work hardening and heat treatment	134 135 137 137 141 145 147 149 150 151 154
Experimental observations The notch effect The fretting fatigue curve Clamping load Amplitude of slip Frequency Fretting fatigue and tensile strength Direction of slip Atmosphere Hardness Work hardening and heat treatment Combination of materials	134 135 137 137 141 145 147 149 150 151 154 155
