

CONTENTS

<b>Chapter</b>	<b>1</b>	
Introduction		1
1.1 The Engineering design Process		1
1.2 Design Optimization		2
1.3 Relative Magnitude of Different Effects		6
1.4 Formulating and Solving Problems		8
1.5 Review of Elementary Mechanics of Materials		12
1.6 Summary		18
<b>Chapter</b>	<b>2</b>	
Material Behavior and Failure		25
2.1 Transformation of Stresses		27
2.2 Failure Theories for Isotropic results		27
2.3 Cyclic Loading and Fatigue		62
2.4 Summary		85
Futhur Reading		86
Problems		87
<b>Chapter</b>	<b>3</b>	
Energy Methods		97
3.1 Work Done on Loading and Unloading		98
3.2 Strain Energy		100
3.3 Load-Displacement Relations		101
3.4 Potential Energy		107
3.5 The Principle of Stationery Potential Energy		110
3.6 The Rayleigh-Ritz Method		118
3.7 Castigliano's First Theorem		129
3.8 Linear Elastic Systems		133
3.9 The Stiffness Matrix		138

3.10 Castigliano's Second Theorem	143
3.11 Summary	157
<b>Chapter 4</b>	
Unsymmetrical Bending	177
4.1 Stress Distribution in Bending	177
4.2 Displacements of the Beam	187
4.3 Second Moments of Area	190
4.4 Further Properties of Second Moments	198
4.5 Summary	211
Further Reading	211
Problems	211
<b>Chapter 5</b>	
Nonlinear and Elastic-Plastic Bending	225
5.1 Kinematics of Bending	225
5.2 Elastic-Plastic Constitutive Behavior	227
5.3 Stress fields in Nonlinear and Inelastic Bending	231
5.4 Pure Bending about and Axis of Symmetry	233
5.5 Bending of a Symmetric Section about an Orthogonal Axis	240
5.6 Unsymmetrical Plastic Bending	248
5.7 Unloading Springback and Residual Stress	252
5.8 Limit Analysis in the Design of Beams	258
5.9 Summary	262
<b>Chapter 6</b>	
Shear and Torsion of Thin-Walled Beams	275
6.1 Derivation of the Shear Stress Formula	276
6.2 Shear Center	291
6.3 Unsymmetrical Sections	298
6.4 Closed Sections	300
6.5 Pure Torsion of Closed Thin-Walled Sections	305

6.6 Finding the Shear Center for a Closed Section	310
6.7 Torsion of Thin-Walled Open Sections	316
6.8 Summary	322
<b>Chapter 7</b>	
Beams on Elastic Foundations	339
7.1 The Governing Equation	340
7.2 The Homogeneous Solution	342
7.3 Localized Nature of the Solution	347
7.4 Concentrated Force on an Infinite Beam	349
7.5 The Particular Solution	351
7.6 Finite Beams	356
7.7 Short Beams	358
7.8 Summary	361
Further Reading	361
Problems	362
<b>Chapter 8</b>	
Membrane Stresses in Axisymmetric Shells	369
8.1 The Meridional Stress	370
8.2 The Circumferential Stress	375
8.3 Self-Weight	381
8.4 Relative Magnitudes of Different Loads	384
8.5 Strains and Displacements	386
8.6 Summary	389
<b>Chapter 9</b>	
Axisymmetric Bending of Cylindrical Shells	401
9.1 Bending Stresses and Moments	401
9.2 Deformation of the Shell	403
9.3 Equilibrium of the Shell Element	405
9.4 The Governing Equation	406

9.5 Localized Loading of the Shell	411
9.6 Shell Transition Regions	412
9.7 Thermal Stresses	419
9.8 The ASME Pressure Vessel Code	421
9.9 Summary	421
Further Reading	422
Problems	422

## **Chapter 10**

Thick-Walled Cylinders and Disks	429
10.1 Solution Method	429
10.2 The Thin Circular Disk	434
10.3 Cylindrical Pressure Vessels	440
10.4 Composite Cylinders, Limits and Fits	443
10.5 Plastic Deformation of Disks and Cylinders	448
10.6 Summary	457
Further Reading	458
Problems	458

## **Chapter 11**

Curved Beams	467
11.1 The Governing Equation	467
11.2 Radial Stresses	480
11.3 Distortion of the Cross Section	482
11.4 Range of Application of the Theory	484
11.5 Summary	485
Further Reading	485
Problems	485

<b>Chapter</b>	<b>12</b>	
Elastic Stability		491
12.1 Uniform Beam in Compression		492
12.2 Effect of Initial Perturbations		497
12.3 Effect of Lateral Load		
(Beam-Columns)		501
12.4 Indeterminate Problems		505
12.5 Suppressing Low-Order Modes		506
12.6 Beams on Elastic Foundations		410
12.7 Energy Methods		518
12.8 Quick Estimates for the Buckling Force		524
12.9 Summary		526
Further Reading		526
Problems		527
<b>Appendix A</b>		
The FiniteElement Method		537
A.1 Approximation		538
A.2 Axial Loading		545
A.3 Solution of Differential Equations		556
A.4 Finite Element Solutions for the Bending of Beams		558
A.5 Two- and Three-Dimensional Problems		565
A.6 Computational Considerations		566
A.7 Use of the Finite Element Method in Design		568
A.8 Summary		569
Further Reading		570
Problems		570
<b>Appendix B</b>		
Properties of Areas		577

**Appendix C**

Stress Concentration Factors 581

**Appendix D**

Answers to Even-Numbered Problems 585
