

## Contents\*

<b>Introduction</b> .....	<b>1</b>
<b>1 Basic principles of ultrasonic testing of materials</b> .....	<b>4</b>
1.1 Oscillations and waves .....	4
1.2 Modes and forms of waves .....	7
1.3 Composite and standing waves. interference .....	11
1.4 Formulas and numerical data .....	15
1.5 Sound waves on boundaries at perpendicular incidence .....	20
1.51 Single. plane interfaces .....	20
1.52 Multiple interfaces. plate and gap .....	23
1.6 Sound waves at interfaces with oblique incidence .....	27
1.61 The law of refraction .....	27
1.62 The acoustic pressure values .....	29
1.63 Reflection in a right-angled edge and in a corner .....	37
1.64 Splitting of surface and boundary waves .....	38
1.65 Acoustic propagation in plates, plate waves .....	39
1.7 Geometric ultrasonic optics .....	41
1.71 Limits of validity .....	41
1.72 Acoustic pressure distance law for spherical and cylindrical waves .....	42
1.73* Reflection and refraction of spherical waves on plane surfaces .....	43
1.74* Curved interfaces as concave mirrors and lenses .....	45
1.75* Spherical waves in hollow and solid cylinders .....	50
1.8 Wave physics of sound field. sound diffraction .....	54
1.81 Elementary description .....	54
1.82* Zone construction of sound fields .....	64
1.83 Sound field at non-uniform excitation of the radiator. for the case of pulse excitation and focusing radiators .....	70
1.84 Echo and shadow of an obstacle in the sound field .....	75
1.9 Attenuation of ultrasonic waves in solids .....	89
1.91 Absorption and scattering .....	89
1.92* Attenuation in metals. anisotropy and cast structure .....	95
1.10 Generation and reception of ultrasonic waves .....	100

\*The sections marked with an asterisk are less important for beginners.

. 1.101	The piezoelectric effect	100
. 1.102	The piezoelectric plate as transmitter and receiver of ultrasonic waves	104
1.103*	Piezoelectric plate with pulse excitation	112
1.104	Piezoelectric materials	121
1.105	Other methods for generating ultrasound	128
<b>2</b>	<b>Methods and instruments for the ultrasonic testing of materials</b>	<b>131</b>
2.0	Classification and revue	131
2.1	Resonance method	131
2.11	Principle and revue of applications	131
2.12	Instruments	135
2.2	Intensity method	141
2.21	Principle, classification and distinction from transit time methods	141
2.22	Instruments for intensity measurements	146
2.23	Instruments for sound image methods	148
2.3	Pulse transit time method	151
2.31	History and principles	151
2.32	Construction and mode of operation of a pulse-echo instrument	155
2.321	Sweep section with CR tube	155
2.322	Transmitter unit	160
2.323	The amplifier	163
2.324	Distance scale and time markers	172
2.325	Noise suppression	175
2.33	The probes	176
2.331	Normal probes	176
2.332	Angle probes	184
2.333*	Calibrating and checking methods for probes	191
2.34	Instruments for the pulse transit time method	196
2.35	Auxiliary instruments for the pulse transit time method	198
2.351	High-precision transit time measurements	198
2.352	Electronic data processing	202
2.353	Documentation methods and instruments	207
2.36*	The shock-wave method	218
2.37*	Frequency modulation method	220
2.371	Principle	220
2.372	Instruments for the FM method	222
2.4	Transit time method	223
2.41	Pulse methods for pure transit time measurements	223
2.42*	Phase measuring method	226
<b>3</b>	<b>Applied ultrasonic testing of materials</b>	<b>227</b>
3.1	General testing technique	227
. 3.11	Coupling	227
4.111	Condition and preparation of surface	227

3.112	Curved surfaces	228
3.113	Coupling media	230
<b>3.114*</b>	Checking of coupling	<b>233</b>
3.115	Coupling through intermediate layers	233
3.12	Ultrasonic frequency and type of probe	239
3.13	Interference effect of boundaries. complicated sound paths and screendisplays	241
3.131	Effect on the sound field by boundaries parallel to the beam axis	241
3.132	Secondary echoes produced by split-off transverse waves	244
3.133	Triangle reflections	247
3.134	61°-Reflection	249
3.135	Screen pictures when testing a plate	251
3.136	Interfering echoes through surface waves	256
3.14	Testing by means of transverse. surface and plate waves	257
3.15	Determination of shape and size of flaws	267
3.16	Disturbances by extraneous high frequency and ultrasonic sources	271
3.17	Organisation of the test. staff and training problems	274
3.18	Testing installations and evaluation of test results	276
3.2	Flaw detection on metallic specimens	279
3.21	Heavy forgings	279
3.22	Worked parts of machines	290
3.23	Railway material	298
4.231	Axles	298
3.232	Rails	304
3.233	Miscellaneous railway material	311
3.24	Plates	313
3.241	Medium and heavy plate	313
3.242	Strip and sheet	425
3.25	Semi-finished products: rods. billets and wires	336
3.251	Rod material	437
3.252	Billets	344
3.253	Wires	346
<b>3.26</b>	Pipes and cylinders	<b>347</b>
3.27	Castings	364
3.28	Welded joints	371
3.281	Butt-welded joints	371
3.281.1	Testing method, general	371
3.281.2	Plate thickness. beam angle and testing frequency	374
3.281.3	Flaw-locating methods	377
3.281.4	Nature. shape and size of defect	382
<b>3.281.5</b>	Recording and automation	<b>385</b>
<b>3.281.6</b>	Main applications and economic viewpoints	<b>394</b>
3.282	Fillet welds	395
3.283	Spot welds	398
3.29	Joints produced by rivetting. glueing and shrinking	40C
3.291	Rivet hole testing	400

<b>3.292</b> Laminar joints produced by soldering, brazing, glueing, plating etc. ....	<b>402</b>
<b>3.293</b> Shrink fits .....	<b>410</b>
<b>3.3</b> Metals and their special testing problems .....	<b>412</b>
<b>3.31</b> Steel .....	<b>412</b>
<b>3.32</b> Cast steel .....	<b>414</b>
<b>3.33</b> Cast iron .....	<b>415</b>
<b>3.34</b> Light metals .....	<b>421</b>
<b>3.35</b> Copper and copper alloys .....	<b>425</b>
<b>3.36</b> Other non-ferrous metals .....	<b>426</b>
<b>3.37</b> Hard metals and other sintered metals .....	<b>428</b>
<b>3.4</b> Testing problems on non-metallic specimens .....	<b>429</b>
<b>3.41</b> Porcelain, steatite and glass .....	<b>429</b>
<b>3.42</b> Plastics .....	<b>434</b>
<b>3.43</b> Rubber .....	<b>436</b>
<b>3.44</b> Natural rock, artificial stone, abrasive wheels and carbon. ....	<b>438</b>
<b>3.45</b> Concrete .....	<b>441</b>
<b>3.46</b> Wood and leather .....	<b>446</b>
<b>3.47</b> Bacon and meat .....	<b>447</b>
<b>3.5</b> Determination of position, shape and level .....	<b>450</b>
<b>3.6</b> Measuring methods using ultrasound .....	<b>453</b>
<b>3.61</b> Measurement of wall and layer thicknesses .....	<b>453</b>
<b>3.62</b> Measurement of acoustic velocity .....	<b>460</b>
<b>3.63</b> Measurement of the attenuation of sound .....	<b>466</b>
<b>3.7</b> Standardization (state <b>1965</b> ) .....	<b>472</b>
<b>Appendix</b> (tables, formulas) .....	<b>476</b>
<b>Bibliography</b> .....	<b>490</b>
<b>Index</b> .....	<b>511</b>
