<i>Foreword</i>	Robert W. Cahn	iii
<i>Preface</i>		v
<i>Contributors</i>		ix
1. Introduction		1
	<i>Xiao-Dong Xiang and Ichiro Takeuchi</i>	
2. Multiple-Sample Concept: The Forerunner of Combinatorial Materials Science		7
	<i>Joseph J. Hanak</i>	
3. The Continuous Composition Spread Approach		35
	<i>R. Bruce van Dover and Lynn F. Schneemeyer</i>	
4. Combinatorial Approach to Ferroelectric/Dielectric Materials		69
	<i>Hauyee Chang and Ichiro Takeuchi</i>	
5. Parallel Synthesis of Artificially Designed Lattices and Devices		91
	<i>Mikk Lippmaa, Masashi Kawasaki, and Hideomi Koinuma</i>	
6. Combinatorial Synthesis of Display Phosphors		141
	<i>Ted X. Sun</i>	

7.	Combinatorial Ion Synthesis and Ion Beam Analysis of Materials Libraries <i>Chang-Ming Chen, Xin-Quan Liu, and Min-Qian Li</i>	177
8.	Mapping of Physical Properties: Composition Phase Diagrams of Complex Materials Systems Using Continuous Composition Materials Chips <i>Young K. Yoo and Xiao-Dong Xiang</i>	213
9.	Temperature-Dependent Materials Research with Micromachined Array Platforms <i>Steve Semancik</i>	263
10	X-Ray Techniques for Characterization of Combinatorial Materials Libraries <i>William Chang</i>	297
11	High-Throughput Screening of Electrical Impedance of Functional Materials by Evanescent Microwave Probe <i>Gang Wang and Xiao-Dong Xiang</i>	329
12	Combinatorial Computational Chemistry Approach in the Design of New Catalysts and Functional Materials <i>Rodion V. Belosludov, Seiichi Takami, Momoji Kubo, and Akira Miyamoto</i>	363
13	Computational Informatics: Guided Discovery for Combinatorial Experiments <i>Krishna Rajan</i>	435
	<i>Index</i>	459
