<b>Welcoming Address</b>	<b>xxi</b>
<b>BENIAMINO SEGRE</b>	
 <b>1</b>	
<b>Thermodynamics and Inorganic Materials</b>	<b>1</b>
<b>ALAN W. SEARCY</b>	
Integral and partial thermodynamic quantities	1
The variation in free energies with temperature	4
Enthalpy and its temperature dependence	5
Entropy and probability	7
Conclusion	13
References	14
 <b>2</b>	
<b>Entropy of High-Temperature Physical and Chemical Processes</b>	<b>15</b>
<b>ALAN W. SEARCY</b>	
The entropies of gas molecules	16
Entropies and partition functions for solids	19
Entropies of transitions involving liquids	23
The characteristic entropies of various classes of reaction	25
The effect of temperature on vapor-phase reaction products	30
References	31
 <b>3</b>	
<b>Enthalpy and Predictions of Solid-State Reaction Equilibria</b>	<b>33</b>
<b>ALAN W. SEARCY</b>	
The stabilities of solid oxides	33
The enthalpies of formation and stabilities of nitrides	43
Enthalpies of formation and stabilities of carbides	48
Silicides, borides, and intermetallic solids	51
References	54
 <b>4</b>	
<b>The Reactions of High-Temperature Materials</b>	<b>57</b>
<b>ALAN W. SEARCY</b>	
Stabilities in ternary refractory systems	57
The stability of oxides toward gasses and reactions that produce gases	64

Calculation of maximum reaction rates from thermodynamic data	66
The stability of oxides in various chemical environments	69
The stability of carbides in various chemical environments	75
Conclusion	78
References	78

## 5

<b>Unfamiliar Vapor Molecules and Their Importance in High-Temperature Chemistry</b>	<b>81</b>
<b>G. DE MARIA</b>	

Homonuclear diatomic molecules of elements	85
Homonuclear polyatomic molecules	89
Heteronuclear diatomic molecules	91
Vaporization of metal halides	93
Vaporization of oxides	96
Gaseous carbide molecules	98
Vaporization of nitrides and borides	101
Conclusion	102
Acknowledgment	103
References	103

## 6

<b>The Kinetics of Evaporation and Condensation Reactions</b>	<b>107</b>
<b>ALAN W. SEARCY</b>	

The relationship of evaporation studies to kinetic theory	108
The rate equation for a two-step evaporation reaction	111
The significance of unit evaporation coefficients	113
The interpretation of kinetics of reactions when $\alpha_v < 1$	116
The dependence of evaporation coefficients on other variables	124
Generalizations about evaporation coefficients for various classes of solid	127
The relationship of condensation coefficients to evaporation coefficients	129
Acknowledgments	131
References	132

<b>7</b>	
<b>Thermodynamics of Defects in Solids</b>	<b>135</b>
<b>DAVID V. RAGONE</b>	
Point defects	136
Defects in compounds	139
Interactions among defects	142
Electronic disorders	145
Dislocations	147
References	149
<b>8</b>	
<b>Nonstoichiometry</b>	<b>151</b>
<b>DAVID V. RAGONE</b>	
Origins of non-stoichiometry	151
Consequences of non-stoichiometry	154
Equilibria in non-stoichiometric solids	155
Summary	162
References	163
<b>9</b>	
<b>Thermodynamics of Surfaces</b>	<b>165</b>
<b>DAVID V. RAGONE</b>	
Surface tension	165
Surface free energy	168
Surface excess quantities	169
Surface stress versus surface tension	171
Equilibrium and surface morphology	173
Interfaces	175
Summary	178
References	179
<b>10</b>	
<b>The Relationship Between Surface and Bulk Properties of Ceramic Materials</b>	<b>181</b>
<b>G. LANZAVECCHIA</b>	
Geometrical surface structure	182
Experimental determinations	183

Electronic surface structure	184
Defect surface structure	195
References	203
 <b>11</b>	
<b>Diffusion in Solids</b>	<b>205</b>
<b>A. ASCOLI</b>	
Historical survey	206
Fick's equations	207
Mechanisms of atomic motion in crystals	208
Diffusion <b>enthalpies</b> and entropies	211
The dependence of diffusion coefficients on concentration	213
Uphill diffusion	214
Evidence for defect mechanisms of bulk diffusion	215
Diffusion as a random-walk problem	217
Derivation of Fick's laws in terms of atom jumps from neighboring planes and the dependence of $D$ on temperature	218
Zener's theory for $D_0$	220
The solution of Fick's equations for simple geometry; diffusion experiments	222
The dependence of diffusion coefficients on pressure	223
Short-circuiting paths for diffusion	226
Acknowledgment	228
References	228
 <b>12</b>	
<b>Nucleation and Phase Transformations at Constant Composition</b>	<b>229</b>
<b>A. ASCOLI</b>	
Nucleation	230
Growth	241
Acknowledgment	243
References	243
 <b>13</b>	
<b>Kinetics and Mechanisms of Metal-Oxygen Reactions</b>	<b>245</b>
<b>PER KOFSTAD</b>	
Experimental method	246
Adsorption, initial oxide formation, and thin oxide films	246

High-temperature oxidation; thick scales	252
Oxidation of alloys	266
References	270

## 14

<b>Material Transport in Solid-State Reactions</b>	<b>273</b>
<b>C. KOOY</b>	

Phase equilibria	277
The Kirkendall effect	279
Acknowledgment	282
References	284

## 15

<b>Mechanical Behavior of Ceramic Materials I. Dislocation Theory</b>	<b>285</b>
<b>HANS CONRAD</b>	

Historical background	285
The need for dislocations	287
Geometrical aspects of dislocation lines	291
Properties of dislocations	296
Obstacles to dislocation motion	304
Thermally activated dislocation motion—dislocation dynamics	316
Dislocations in ceramic crystals	319
Origin of dislocations in crystals	320
Experimental observations on dislocations	323
References	331

## 16

<b>Mechanical Behavior of Ceramic Materials II. Plastic Flow and Fracture</b>	<b>333</b>
<b>HANS CONRAD</b>	

Plastic flow—single crystals	333
Plastic flow—polycrystals	359
Fracture	369
References	387

<b>17</b>	
<b>Mechanical Behavior of ceramic materials III. Deformation and Fracture Related to Design and Use</b>	<b>391</b>
<b>HANS CONRAD</b>	
Elastic and anelastic deformation	391
Strength of ceramics	397
References	411
<b>18</b>	
<b>Sintering and Microstructure Control</b>	<b>413</b>
<b>J. E. BURKE</b>	
A brief description of sintering	413
Some useful relationships	415
Neck formation between particles	418
Rate of shrinkage of multiple-sphere aggregates	418
A quantitative model for shrinkage rate	419
Sintering in uranium dioxide	426
Role of particle size—nature of active powders	428
Studies of the initial stages of sintering	429
Later stages of sintering	430
Inhibition of boundary movement by second-phase inclusions	433
Grain growth in ceramics	434
Mobility of grain boundaries	438
Liquid-phase sintering	439
Hot pressing	440
References	441
<b>19</b>	
<b>Glasses—Their Salient Chemical and Physical Properties</b>	<b>443</b>
<b>J. ZARZYCKI</b>	
Nature of the glassy state	443
Conditions of glass formation—kinetic approach	448
Structure of glasses	449
Conditions of glass formation—structural approach	453
Dependence of physical and chemical properties on composition and structure	459
Some salient properties of glasses	460
Conclusion	473
References	473

## 20

**Irreversible Thermodynamics and Its Application to the Behavior of Solids in Temperature Gradients 475****G. NICOLIS**

Review of the general statistical-mechanical theory of irreversible processes; application of the general theory to the study of nonuniform systems 477

Statistical theory of Brownian motion in a nonuniform medium 484

Discussion 490

References 492

## 21

**The Electron as a Chemical Entity in Solids 493****H. REISS**

Energy bands and mass action 496

Impurities in the elemental semiconductors—analogy with aqueous solutions 505

Self-compensation, buffering, and nonstoichiometry 510

Conclusion 519

References 520

## 22

**Mechanical Properties of Fiber-Reinforced Materials 523****A. KELLY**

Stage I 524

Stage II 532

Stage III 537

Fracture of a composite 542

References 550

## 23

**The Structure and Properties of Pyrolytic Carbon 553****J. C. BOKROS**

The structure of pyrolytic carbon 553

The dependence of the structure of pyrolytic carbon on the deposition conditions 557

The dependence of the mechanical properties of pyrolytic carbon on its structure 559

The dependence of the thermal expansion of pyrolytic carbon on its structure	563
The dependence of radiation-induced dimensional changes on the structure of pyrolytic carbon	566
New applications of high-strength carbons deposited in fluidized beds	579
References	581
 <b>24</b>	
The Effect of Nuclear Radiation on the Mechanical and Chemical Properties of Ceramics	<b>585</b>
D. H. <b>BOWEN</b> AND F. J. P. <b>CLARKE</b>	
Nuclear radiation	586
Chemical effects produced by irradiation	591
Mechanical effects of irradiation	596
Acknowledgments	611
References	612
 <b>25</b>	
Materials for Nuclear Technology	<b>615</b>
M. V. <b>NEVITT</b> AND R. B. <b>DUFFIELD</b>	
Classification of nuclear materials	616
Functional performance in terms of properties and structure	620
Summary	634
References	634
 <b>26</b>	
Some Uses of Science in Technical Ceramic Fabrication	<b>637</b>
J. R. <b>JOHNSON</b> AND E. <b>FATUZZO</b>	
Flow of particles	638
Sintering	640
Pyrolysis	642
Nucleation	643
Novel raw-materials processes	645
Ferroelectric ceramics	647
Polycrystalline ferrites	654
References	655
General References	655

<b>Contents</b>	<b>xix</b>
