	<i>Page</i>
<b>CHAPTER 1.—Materials and the Engineer</b> . . . . .	1
Introduction—Development of the use of materials—Requirements for materials—Use of properties—Variation in properties—Structure of materials—Space lattice.	
<b>CHAPTER 2.—Behavior of Materials Under Load</b> . . . . .	15
Stress—Normal and tangential stresses—Strain—Stress-strain diagrams—Elastic action—Elastic limit—Hooke's Law—Inelastic action—Stress-strain-time relationships—Problems.	
<b>CHAPTER 3.—Failure of Materials</b> . . . . .	33
Definition of failure—Causes—Types of loading—Resistance to failure. <i>Failure by Fracture:</i> Fracture—Fracture under static load; ultimate strength—Fracture under dynamic load; modulus of toughness—Fracture under repeated load; endurance limit. <i>Failure by Slip:</i> Slip—Slip under static load; elastic strength—Slip under dynamic load; modulus of resilience—Stresses above the elastic strength. <i>Failure by Creep:</i> Creep—Creep limit—Problems.	
<b>CHAPTER 4.—Use of Properties in Design</b> . . . . .	65
Basis of design—Allowable working stress—Stress concentration factor—Factor of safety—Biaxial and triaxial stress—Theories of failure—Problems.	
<b>CHAPTER 5.—Qualities Other than Strength</b> . . . . .	83
Importance of other qualities—Durability—Change in dimensions—Limiting unit strain—Workability—Ductility—Malleability—Plasticity—Hardness—Weight—Particle size—Hysteresis—Other types of forces—Electrical characteristics—Thermal characteristics—Acoustical characteristics—Chemical characteristics—Problems.	
<b>CHAPTER 6.—Control of the Properties of Materials</b> . . . . .	109
Importance of control—Basis of control—Effects of changes of temperature—Temperature-time characteristics. <i>Equilibrium Diagrams:</i> Classification of equilibrium diagrams—Layer type—Solid-solution type—Eutectic type—Combination types—Reheating and cooling—Applications of equilibrium diagrams. <i>Shaping Operations and Their Effects Upon Properties:</i> Classification of shaping operations—Castings—Properties of castings—Rolling—Properties of rolled sections—Forging—Properties of forgings—Extrusions—Properties of extrusions—Drawn wire and tubing—Cupped shapes—Spinning—Pierced shapes—Riveted or bolted assemblies—Welding and brazing—Laminated construction—Powder-metallurgy parts—Finished surfaces—Selection of materials and processes—Problems.

CHAPTER 7.—The Iron-Carbon System. . . . .	156
Variation in <b>properties</b> — <b>Equilibrium</b> diagram—Action of <b>alloys</b> in <b>cooling</b> — <b>Constituents</b> at room temperature—Variation of strength and ductility with carbon content—% thermal transformations and <b>quenching</b> —Effects of reheating— <b>Quenching</b> — <b>Hardening</b> — <b>Annealing</b> — <b>Casehardening</b> — <b>Austempering</b> — <b>Martempering</b> — <b>Flame hardening</b> and induction heating—Cold treatment— <b>Hardenability</b> — <b>Problems</b> .	
CHAPTER 8.—Manufacture and Properties of the Ferrous Metals. . . . .	181
Uses—Ore—Processing—Production of pig iron. <b>Cast iron</b> : Production—Types of cast iron—Properties of <b>cast iron</b> —Uses of <b>cast iron</b> —Physical defects in cast iron—Effect of other elements. <b>Wrought Iron</b> : Definition—Production—Types of wrought iron— <b>Properties</b> of wrought iron. <b>Steel</b> : Definition—Production of steel— <b>The Bessemer process</b> — <b>The open-hearth process</b> — <b>Comparison</b> of Bessemer and open-hearth <b>processes</b> — <b>Duplex</b> and triplex processes—Electric-furnace process—Other processes—Shaping operations. <b>Impurities in Steel</b> : Use of elements other than iron and <b>carbon</b> —Sulfur—Phosphorus—Oxygen—Hydrogen— <b>Nitrogen</b> — <b>Necessity</b> for alloying <b>steel</b> — <b>Classification</b> of alloy <b>steels</b> — <b>Carbon</b> — <b>Nickel</b> — <b>Chromium</b> — <b>Molybdenum</b> — <b>Silicon</b> — <b>Tungsten</b> — <b>Vanadium</b> — <b>Manganese</b> — <b>Boron</b> — <b>Columbium</b> — <b>Copper</b> — <b>Lead</b> — <b>Titanium</b> —Other alloying elements— <b>Hardenability</b> of alloy steels. <b>Deterioration of the Ferrous Metals</b> : Nature of <b>Deterioration</b> —Action in Corrosion—Methods of preventing corrosion—Value of principles— <b>Problems</b> .	
CHAPTER 9.—Non-Ferrous Metals. . . . .	244
Introduction. <b>Copper</b> : Historical sketch—Ores—Preparation—Properties—Uses—Alloys of copper. <b>Aluminum</b> : <b>History</b> — <b>Ores</b> —Production of aluminum—Properties of aluminum—Uses of aluminum—Alloys of aluminum. <b>Lead</b> : Historical <b>background</b> —Ores—Preparation—Properties of lead—Uses of lead—Alloys of lead. <b>Tin</b> : History of tin—Ores—Preparation—Properties—Uses—Alloys of tin. <b>Zinc</b> : History—Ores—Preparation—Properties of zinc—Uses of <b>zinc</b> — <b>Zinc</b> alloys. <b>Nickel</b> : History of <b>Nickel</b> —Ores—Preparation—Properties of nickel—Uses of nickel—Alloys of nickel. <b>Magnesium</b> : History—Production—Properties and uses of magnesium—Alloys of magnesium. <b>Secondary Metals</b> : Properties of Secondary Metals—Metallic <b>carbides</b> — <b>Problems</b> .	
CHAPTER 10.—Timber; . . . . .	299
Uses—Kinds of <b>wood</b> — <b>Structure</b> of wood—Production of lumber—Defects in lumber—Grades of lumber—Size of <b>lumber</b> — <b>Properties</b> of timber—Principal hardwoods—Principal <b>softwoods</b> — <b>Deterioration</b> of timber—Timber preservatives—Methods of <b>applying</b> preservatives—Fire <b>resistance</b> — <b>Plywood</b> — <b>Processed woods</b> —Importance of timber— <b>Problems</b> .	
CHAPTER 11.—Stone . . . . .	328
Uses—Preparation of building stone—Types of stone—Properties of stone—Durability of stone— <b>Limestone</b> — <b>Marble</b> — <b>Granite</b> — <b>Sandstone</b> — <b>Slate</b> — <b>Problems</b> .	

	Page
CHAPTER 12.—Clay Products.....	339
Structural uses—Raw materials—Manufacture of clay products—Selection of materials—Defects—Types of clay products—Brick—Terra Cotta—Hollow building block—Tile—Conduit—Miscellaneous shapes—Properties of clay products—Additional uses of clay—Problems.	
CHAPTER 13.—Cementing Materials.....	359
Types of cements. <i>Gypsum</i> : Production—Preparation—Properties—Uses. <i>Lime</i> : Production—Preparation—Properties—Uses. <i>Cements</i> : Composition—Hydraulic lime—Puzzolan cement—Slag cement—Natural cement. <i>Portland Cement</i> : Definition—Manufacture—Properties—Types of portland cement—Problems.	
CHAPTER 14.—Concrete.....	379
Uses—Ingredients—Proportioning the ingredients—Volume of freshly-mixed concrete—Mixing—Transporting and placing—Alteration of strength after placement—Properties of concrete—Deterioration of concrete—Reinforced concrete—Problems.	
CHAPTER 15.—Miscellaneous Materials.....	400
<i>Rubber</i> : History—Production—Properties of rubber—Synthetic rubbers. <i>Rope</i> : Uses—Manufacture of fiber rope—Properties. <i>Adhesives</i> : Types of adhesives—Preparation—Properties of glue. <i>Glass</i> : Types of glass—Manufacture of glass—Properties of glass. <i>Bituminous Materials</i> : Uses—Production—Properties. <i>Plastics</i> : Types of plastics—Shellac—Cellulose derivatives—Vinyl and acrylic resins—Polyethylene, polystyrene, and polyamide—Phenol and formaldehyde derivatives—Casein derivatives. <i>Silicones</i> : Types and uses. <i>Protective Coatings</i> : Types of protective coatings—Natural oxides—Metal plating—Concrete and bituminous coatings—Paint—Varnish—Problems.	
REVIEW QUESTIONS.....	424
ANSWERS TO PROBLEMS.....	447
INDEX TO PROPERTIES.....	449
GENERAL INDEX.....	453
