

Contents in Brief

1 Materials Science and Engineering, **2**

PART I FUNDAMENTALS, **22**

- 2 Atomic Scale Structures, **24**
 3 Crystal Structures, **64**
 4 Point Defects and Diffusion, **118**
 5 Linear, Planar, and Volume Defects, **154**
 6 Noncrystalline and Semicrystalline Materials, **196**

PART II MICROSTRUCTURAL DEVELOPMENT, **238**

- 7 Phase Equilibria and Phase Diagrams, **240**
 8 Kinetics and Microstructure of Structural Transformations, **300**

PART III PROPERTIES, **370**

- 9 Mechanical Properties, **372**
 10 Electrical Properties, **442**
 11 Optical and Dielectric Properties, **496**

12 Magnetic Properties, **536**

13 Thermal Properties, **568**

14 Composite Materials, **594**

15 Materials–Environment Interactions, **632**

PART IV MATERIALS SYNTHESIS AND DESIGN, **688**

- 16 Materials Processing, **690**
 17 Materials and Engineering Design, **748**

APPENDICES

- A Periodic Table of the Elements, **796**
 B Physical and Chemical Data for the Elements, **798**
 C Atomic and Ionic Radii of the Elements, **801**
 D Mechanical Properties, **803**

Glossary, **818**

References, **830**

Index, **832**

Contents

CHAPTER ① Materials Science and Engineering, 2

- 1.1 Introduction, 3
- 1.2 The Role of Materials in Technologically Advanced Societies, 4
- 1.3 The Engineering Profession and Materials, 7
- 1.4 Major Classes of Materials, 9
 - 1.4.1 Metals, 9
 - 1.4.2 Ceramics, 10
 - 1.4.3 Polymers, 11
 - 1.4.4 Composites, 12
 - 1.4.5 Semiconductors, 14
- 1.5 Materials Properties and Engineering, 15
- 1.6 The Integrated Approach to Materials Engineering, 18
- 1.7 Engineering Professionalism and Ethics, 19
 - Summary, 21

PART ① FUNDAMENTALS, 22

CHAPTER ② Atomic Scale Structures, 24

- 2.1 Introduction, 25
- 2.2 Atomic Structure, 25
- 2.3 Thermodynamics and Kinetics, 29
- 2.4 Primary Bonds, 33
 - 2.4.1 Ionic Bonding, 33
 - 2.4.2 Covalent Bonding, 37
 - 2.4.3 Metallic Bonding, 38
 - 2.4.4 Influence of Bond Type on Engineering Properties, 40
- 2.5 The Bond-Energy Curve, 42
- 2.6 Atomic Packing and Coordination Numbers, 46
- 2.7 Secondary Bonds, 53
- 2.8 Mixed Bonding, 55

- 2.9 The Structure of Polymer Molecules, 56
 - Summary, 59
 - Key Terms, 60
 - Homework Problems, 60

CHAPTER ③ Crystal Structures, 64

- 3.1 Introduction, 65
- 3.2 Bravais Lattices and Unit Cells, 66
- 3.3 Crystals with One Atom per Lattice Site and Hexagonal Crystals, 69
 - 3.3.1 Bodycentered Cubic Crystals, 69
 - 3.3.2 Face-centered Cubic Crystals, 72
 - 3.3.3 Hexagonal Close-packed Structures, 73
- 3.4 Miller Indices, 76
 - 3.4.1 Coordinates of Points, 76
 - 3.4.2 Indices of Directions, 78
 - 3.4.3 Indices of Planes, 80
 - 3.4.4 Indices in the Hexagonal System, 82
- 3.5 Densities and Packing Factors of Crystalline Structures, 82
 - 3.5.1 Linear Density, 83
 - 3.5.2 Planar Density, 84
 - 3.5.3 Volumetric Density, 86
 - 3.5.4 Atomic Packing Factors and Coordination Numbers, 87
 - 3.5.5 Close-packed Structures, 88
- 3.6 Interstitial Positions and Sizes, 90
 - 3.6.1 Interstices in the FCC Structure, 90
 - 3.6.2 Interstices in the BCC Structure, 92
 - 3.6.3 Interstices in the HCP Structure, 92
- 3.7 Crystals with Multiple Atoms per Lattice Site, 93
 - 3.7.1 Crystals with Two Atoms per Lattice Site, 93

- 3.7.2 Crystals with Three Atoms per Lattice Site, **97**
 - 3.7.3 Other Crystal Structures, **98**
 - 3.8 Liquid Crystals, **101**
 - 3.9 Single Crystals and Polycrystalline Materials, **101**
 - 3.10 Polymorphism, **102**
 - 3.11 Anisotropy, **104**
 - 3.12 X-ray Diffraction, **104**
 - Summary, **110**
 - Key Terms, **111**
 - Homework Problems, **111**
- CHAPTER ④ Point Defects and Diffusion, **118**
- 4.1 Introduction, **119**
 - 4.2 Point Defects, **119**
 - 4.2.1 Vacancies and Interstitials in Crystals, **120**
 - 4.2.2 Vacancies and Interstitials in Ionic Crystals, **122**
 - 4.3 Impurities, **124**
 - 4.3.1 Impurities in Crystals, **125**
 - 4.3.2 Impurities in Ionic Crystals, **129**
 - 4.4 Solid-State Diffusion, **131**
 - 4.4.1 Practical Examples of Diffusion, **131**
 - 4.4.2 A Physical Description of Diffusion (Fick's First Law), **133**
 - 4.4.3 Mechanisms of Diffusion in Covalent and Metallic Crystals, **136**
 - 4.4.4 Diffusion for Different Levels of Concentration, **138**
 - 4.4.5 Mechanisms of Diffusion in Ionic Crystals, **140**
 - 4.4.6 Mechanisms of Diffusion in Polymers, **141**
 - 4.4.7 Fick's Second Law, **144**
 - Summary, **149**
 - Key Terms, **150**
 - Homework Problems, **150**
- CHAPTER ⑤ Linear, Planar, and Volume Defects, **154**
- 5.1 Introduction, **155**
 - 5.2 Linear Defects, Slip, and Plastic Deformation, **155**
 - 5.2.1 The Shear Strength of Deformable Single Crystals, **156**
 - 5.2.2 Slip in Crystalline Materials and Edge Dislocations, **158**
 - 5.2.3 Other Types of Dislocations, **165**
 - 5.2.4 Slip Planes and Slip Directions in Metal Crystals, **168**
 - 5.2.5 Dislocations in Ionic, Covalent, and Polymer Crystals, **172**
 - 5.2.6 Other Effects of Dislocations on Properties, **177**
 - 5.3 Planar Defects, **5.3**
 - 5.3.1 Free Surfaces in Crystals, **177**
 - 5.3.2 Grain Boundaries in Crystals, **178**
 - 5.3.3 Grain Size Measurement, **179**
 - 5.3.4 Grain Boundary Diffusion, **181**
 - 5.3.5 Other Planar Defects, **182**
 - 5.4 Volume Defects, **184**
 - 5.5 Strengthening Mechanisms in Metals, **185**
 - 5.5.1 Alloying for Strength, **186**
 - 5.5.2 Strain Hardening, **187**
 - 5.5.3 Grain Refinement, **189**
 - 5.5.4 Precipitation Hardening, **190**
 - Summary, **191**
 - Key Terms, **191**
 - Homework Problems, **192**
- CHAPTER ⑥ Noncrystalline and Semicrystalline Materials, **196**
- 6.1 Introduction, **197**
 - 6.2 The Glass Transition Temperature, **197**
 - 6.3 Viscous Deformation, **201**
 - 6.4 Structure and Properties of Amorphous and Semicrystalline Polymers, **204**
 - 6.4.1 Polymer Classification, **204**
 - 6.4.2 Molecular Weight, **210**
 - 6.4.3 Polymer Conformations and Configurations, **212**
 - 6.4.4 Factors Determining Crystallinity of Polymers, **215**
 - 6.4.5 Semicrystalline Polymers, **217**
 - 6.4.6 The Relationship between Structure and T_g , **218**
 - 6.5 Structure and Properties of Glasses, **218**
 - 6.5.1 Ionic Glasses, **220**
 - 6.5.2 Covalent Glasses, **224**
 - 6.5.3 Metallic Glasses, **225**
 - 6.6 Structure and Properties of Rubbers and Elastomers, **225**
 - 6.6.1 Thermoset Elastomers, **226**
 - 6.6.2 Thermoplastic Elastomers, **227**
 - 6.6.3 Crystallization in Rubbers, **228**
 - 6.6.4 Temperature Dependence of Elastic Modulus, **229**
 - 6.6.5 Rubber Elasticity, **230**
 - Summary, **233**
 - Key Terms, **234**
 - Homework Problems, **234**

PART II MICROSTRUCTURAL DEVELOPMENT, 238

CHAPTER 7 Phase Equilibria and Phase Diagrams, 240

- 7.1 Introduction, 241
 - 7.2 The One-Component Phase Diagram, 242
 - 7.3 Phase Equilibria in a Two-Component System, 246
 - 7.3.1 Specification of Composition, 246
 - 7.3.2 The Isomorphous Diagram for Ideal Systems, 247
 - 7.3.3 Phases in Equilibrium and the Lever Rule, 249
 - 7.3.4 Solidification and Microstructure of Isomorphous Alloys, 252
 - 7.3.5 Determination of Liquidus and Solidus Boundaries, 254
 - 7.3.6 Specific Isomorphous Systems, 255
 - 7.3.7 Deviations from Ideal Behavior, 256
 - 7.4 The Eutectic Phase Diagram, 261
 - 7.4.1 Definitions of Terms in the Eutectic System, 261
 - 7.4.2 Melting and Solidification of Eutectic Alloys, 263
 - 7.4.3 Solidification of Off-Eutectic Alloys, 264
 - 7.4.4 Methods Used to Determine a Phase Diagram, 269
 - 7.4.5 Phase Diagrams Containing Two Eutectics, 271
 - 7.5 The Peritectic Phase Diagram, 274
 - 7.6 The Monotectic Phase Diagram, 278
 - 7.7 Complex Diagrams, 279
 - 7.8 Phase Equilibria Involving Solid-to-Solid Reactions, 281
 - 7.8.1 Eutectoid Systems, 283
 - 7.9 Phase Equilibria in Three-Component Systems, 286
 - 7.9.1 Plotting Compositions on a Ternary Diagram, 287
 - 7.9.2 The Lever Rule in Ternary Systems, 290
- Summary, 291
Key Terms, 292
Homework Problems, 292

CHAPTER 8 Kinetics and Microstructure of Structural Transformations, 300

- 8.1 Introduction, 301
- 8.2 Fundamental Aspects of Structural Transformations, 302
 - 8.2.1 The Nature of a Phase Transformation, 302

- 8.2.2 The Driving Force for a Phase Change, 303
 - 8.2.3 Homogeneous Nucleation of a Phase, 306
 - 8.2.4 Heterogeneous Nucleation of a Phase, 308
 - 8.2.5 Matrix Precipitate Interfaces, 312
 - 8.2.6 Growth of a Phase, 315
- ### 8.3 Applications to Engineering Materials, 318
- 8.3.1 Phase Transformations in Steels, 318
 - 8.3.2 Precipitation from a Supersaturated Solid Solution, 333
 - 8.3.3 Solidification and Homogenization of an Alloy, 339
 - 8.3.4 Recovery and Recrystallization Processes, 345
 - 8.3.5 Sintering, 349
 - 8.3.6 Martensitic (Displacive) Transformations in Zirconia, 352
 - 8.3.7 Devitrification of an Oxide Glass, 354
 - 8.3.8 Crystallization of Polymers, 355
- Summary, 358
Key Terms, 358
Homework Problems, 359

PART III PROPERTIES, 370

CHAPTER 9 Mechanical Properties, 372

- 9.1 Introduction, 373
- 9.2 Deformation and Fracture of Engineering Materials, 374
 - 9.2.1 Elastic Deformation, 374
 - 9.2.2 Viscoelastic Deformation, 378
 - 9.2.3 Plastic Deformation, 381
 - 9.2.4 Tensile Testing, 382
 - 9.2.5 Strengthening Mechanisms, 390
 - 9.2.6 Ductile and Brittle Fracture, 391
 - 9.2.7 Hardness Testing, 393
 - 9.2.8 Charpy Impact Testing, 396
- 9.3 Brittle Fracture, 400
 - 9.3.1 Examples and Sequence of Events Leading to Brittle Fracture, 400
 - 9.3.2 Griffith-Orowan Theory for Predicting Brittle Fracture, 403
- 9.4 Fracture Mechanics: A Modern Approach, 405
 - 9.4.1 The Stress Intensity Parameter, 405
 - 9.4.2 The Influence of Sample Thickness, 406
 - 9.4.3 Relationship between Fracture Toughness and Tensile Properties, 409

- 9.4.4 Application of Fracture Mechanics to Various Classes of Materials, 409
 - 9.4.5 Experimental Determination of Fracture Toughness, 412
 - 9.5 Fatigue Fracture, 414
 - 9.5.1 Definitions Relating to Fatigue Fracture, 414
 - 9.5.2 Fatigue Testing, 416
 - 9.5.3 Correlations between Fatigue Strength and Other Mechanical Properties, 417
 - 9.5.4 Microscopic Aspects of Fatigue, 419
 - 9.5.5 Prevention of Fatigue Fractures, 420
 - 9.5.6 A Fracture Mechanics Approach to Fatigue, 421
 - 9.6 Time-Dependent Behavior, 424
 - 9.6.1 Environmentally Induced Fracture, 424
 - 9.6.2 Creep in Metals and Ceramics, 425
 - 9.6.3 Mechanisms of Creep Deformation, 427
 - Summary, 432
 - Key Terms, 433
 - Homework Problems, 433
- CHAPTER 10 Electrical Properties, 442
- 10.1 Introduction, 443
 - 10.2 Electrical Conduction, 444
 - 10.2.1 Charge per Carrier, 447
 - 10.2.2 Charge Mobility, 448
 - 10.2.3 Energy Band Diagrams and Number of Charge Carriers, 451
 - 10.2.4 The Influence of Temperature on Electrical Conductivity and the Fermi-Dirac Distribution Function, 455
 - 10.2.5 Conductors, Semiconductors, and Insulators, 460
 - 10.2.6 Ionic Conduction Mechanisms, 465
 - 10.2.7 Effects of Defects and Impurities, 467
 - 10.2.8 Conducting Polymers, 469
 - 10.2.9 Superconductivity, 470
 - 10.2.10 Devices and Applications, 472
 - 10.3 Semiconductors, 473
 - 10.3.1 Intrinsic and Extrinsic Conduction, 473
 - 10.3.2 Compound Semiconductors, 480
 - 10.3.3 Role of Defects, 481
 - 10.3.4 Simple Devices, 482
 - 10.3.5 Microelectronics, 487
 - Summary, 489
- Key Terms, 490
- Homework Problems, 490
- CHAPTER 11 Optical and Dielectric Properties, 496
- 11.1 Introduction, 497
 - 11.2 Polarization, 497
 - 11.2.1 Electronic Polarization, 498
 - 11.2.2 Ionic Polarization, 500
 - 11.2.3 Molecular Polarization, 500
 - 11.2.4 Interfacial Polarization, 501
 - 11.2.5 Net Polarization, 501
 - 11.2.6 Applications, 502
 - 11.3 Dielectric Constant and Capacitance, 504
 - 11.3.1 Capacitance, 504
 - 11.3.2 Permittivity and Dielectric Constant, 505
 - 11.3.3 Dielectric Strength and Breakdown, 507
 - 11.4 Dissipation and Dielectric Loss, 509
 - 11.5 Refraction and Reflection, 511
 - 11.5.1 Refraction, 512
 - 11.5.2 Specular Reflection, 514
 - 11.5.3 Dispersion, 516
 - 11.5.4 Birefringence, 517
 - 11.5.5 Application: Optical Waveguides, 518
 - 11.6 Absorption, Transmission, and Scattering, 520
 - 11.6.1 Absorption, 521
 - 11.6.2 Absorption Coefficient, 522
 - 11.6.3 Absorption by Chromophores, 523
 - 11.6.4 Scattering and Opacity, 525
 - 11.7 Electronic Processes, 526
 - 11.7.1 X-ray Fluorescence, 526
 - 11.7.2 Luminescence, 527
 - 11.7.3 Phosphorescence, 528
 - 11.7.4 Thermal Emission, 528
 - 11.7.5 Photoconductivity, 529
 - 11.7.6 Application: Lasers, 529
 - Summary, 531
 - Key Terms, 532
 - Homework Problems, 532
- CHAPTER 12 Magnetic Properties, 536
- 12.1 Introduction, 537
 - 12.2 Materials and Magnetism, 537
 - 12.3 Physical Basis of Magnetism, 538
 - 12.4 Classification of Magnetic Materials, 541
 - 12.5 Diamagnetism and Paramagnetism, 541

- 12.6 Ferromagnetism, 542
 - 12.6.1 Magnetic Domains, 544
 - 12.6.2 Response of Ferromagnetic Materials to External Fields, 546
 - 12.6.3 The Shape of the Hysteresis Loop, 548
 - 12.6.4 Microstructural Effects, 549
 - 12.6.5 Temperature Effects, 549
 - 12.6.6 Estimating the Magnitude of M , 549
 - 12.7 Antiferromagnetism and Ferrimagnetism, 550
 - 12.8 Devices and Applications, 554
 - 12.8.1 Permanent Magnets, 554
 - 12.8.2 Transformer Cores, 556
 - 12.8.3 Magnetic Storage Devices, 558
 - 12.9 Superconducting Magnets, 559
 - Summary, 561
 - Key Terms, 562
 - Homework Problems, 562
- CHAPTER 13 Thermal Properties, 568**
- 13.1 Introduction, 569
 - 13.2 Coefficient of Thermal Expansion, 569
 - 13.3 Heat Capacity, 573
 - 13.4 Thermal Conduction Mechanisms, 576
 - 13.5 Thermal Stresses, 581
 - 13.6 Applications, 585
 - 13.6.1 Bimetallic Strip, 585
 - 13.6.2 Thermal Insulation, 585
 - 13.6.3 Thermal Shock-Resistant Cookware, 586
 - 13.6.4 Tempered Glass, 587
 - 13.6.5 Support Structure for Orbiting Telescopes, 588
 - 13.6.6 Ceramic-to-Metal Joints, 589
 - 13.6.7 Cryogenic Materials, 589
 - Summary, 590
 - Key Terms, 590
 - Homework Problems, 590
- CHAPTER 14 Composite Materials, 594**
- 14.1 Introduction, 595
 - 14.2 History and Classification of Composites, 596
 - 14.3 General Concepts, 599
 - 14.3.1 Strengthening by Fiber Reinforcement, 600
 - 14.3.2 Characteristics of Fiber Materials, 601
 - 14.3.3 Characteristics of Matrix Materials, 606
 - 14.3.4 Role of Interfaces, 606
 - 14.3.5 Fiber Architecture, 609
 - 14.3.6 Strengthening in Aggregate Composites, 611
 - 14.4 Practical Composite Systems, 611
 - 14.4.1 Metal-Matrix Composites, 611
 - 14.4.2 Polymer-Matrix Composites, 612
 - 14.4.3 Ceramic-Matrix Composites, 612
 - 14.4.4 Carbon-Carbon Composites, 614
 - 14.5 Prediction of Composite Properties, 614
 - 14.5.1 Estimation of Fiber Diameter, Volume Fraction, and Density of the Composite, 614
 - 14.5.2 Estimation of Elastic Modulus and Strength, 615
 - 14.5.3 Estimation of the Coefficient of Thermal Expansion, 619
 - 14.5.4 Fracture Behavior of Composites, 619
 - 14.5.5 Fatigue Behavior of Composites, 620
 - 14.6 Other Applications of Composites, 623
 - 14.6.1 Estimation of Nonmechanical Properties of Composites, 626
 - Summary, 626
 - Key Terms, 627
 - Homework Problems, 627
- CHAPTER 15 Materials–Environment Interactions, 632**
- 15.1 Introduction, 633
 - 15.2 Liquid–Solid Reactions, 633
 - 15.2.1 Direct Dissolution Mechanisms, 635
 - 15.2.2 Electrochemical Corrosion—Half-Cell Potentials, 639
 - 15.2.3 Kinetics of Corrosion Reactions, 646
 - 15.2.4 Specific Types of Corrosion, 648
 - 15.2.5 Corrosion Prevention, 660
 - 15.3 Direct Atmospheric Attack (Gas–Solid Reactions), 664
 - 15.3.1 Alteration of Bond Structures by Atmospheric Gases, 665
 - 15.3.2 Formation of Gaseous Reaction Products, 666
 - 15.3.3 Protective and Nonprotective Solid Oxides, 667
 - 15.3.4 Kinetics of Oxidation, 669
 - 15.3.5 Using Atmospheric “Attack” to Advantage, 673
 - 15.3.6 Methods of Improving Resistance to Atmospheric Attack, 674

- 15.4 Friction and Wear (Solid–Solid Interactions), 676
 - 15.4.1 Wear Mechanisms, 676
 - 15.4.2 Designing to Minimize Friction and Wear, 678
- 15.5 Radiation Damage, 679
 - Summary, 681
 - Key Terms, 682
 - Homework Problems, 682

PART IV MATERIALS SYNTHESIS AND DESIGN, 688

CHAPTER 16 Materials Processing, 690

- 16.1 Introduction, 691
- 16.2 Process Selection Criteria and Interrelationship among Structure, Processing, and Properties, 691
- 16.3 Casting, 692
 - 16.3.1 Metal Casting, 693
 - 16.3.2 Casting of Ceramics, 697
 - 16.3.3 Polymer Molding, 698
- 16.4 Forming, 700
 - 16.4.1 Metal Forming, 700
 - Case Study: Process Selection for a Steel Plate, 701
 - 16.4.2 Forming of Polymers, 707
 - 16.4.3 Forming of Ceramics and Glasses, 709
- 16.5 Powder Processing, 711
 - 16.5.1 Powder Metallurgy, 711
 - Case Study: Specification of Powder Size Distribution for Producing Steel Sprockets, 713
 - 16.5.2 Powder Processing of Ceramics, 714
- 16.6 Machining, 714
- 16.7 Joining Processes, 716
 - 16.7.1 Welding, Brazing, and Soldering, 716
 - 16.7.2 Adhesive Bonding, 718
 - 16.7.3 Diffusion Bonding, 720
 - 16.7.4 Mechanical Joining, 721
- 16.8 Surface Coatings and Treatments, 721
 - 16.8.1 Application of Coatings and Painting, 722
 - 16.8.2 Surface Treatments, 723
 - Case Study: Material and Process Selection for Automobile Engine Crankshafts, 724

- 16.9 Single-Crystal and Semiconductor Processing, 724
 - 16.9.1 Growth and Processing of Single Crystals, 725
 - 16.9.2 Oxidation, 725
 - 16.9.3 Lithography and Etching, 727
 - Case Study: Mask Selection for Doping of Si Wafers, 727
 - 16.9.4 Diffusion and Ion Implantation, 728
 - 16.9.5 Interconnection, Assembly, and Packaging, 729
- 16.10 Fiber Manufacturing, 731
 - 16.10.1 Melt-Spinning, 731
 - 16.10.2 Solution Spinning, 732
 - 16.10.3 Controlled Pyrolysis, 733
 - 16.10.4 Vapor Phase Processes, 735
 - 16.10.5 Sintering, 735
 - 16.10.6 Chemical Reaction, 736
- 16.11 Composite-Manufacturing Processes, 737
 - 16.11.1 Polymer-Matrix Composites (PMCs), 737
 - 16.11.2 Metal-Matrix Composites (MMCs), 738
 - 16.11.3 Ceramic-Matrix Composites (CMCs), 739
 - Summary, 741
 - Key Terms, 742
 - Homework Problems, 743

CHAPTER 17 Materials and Engineering Design, 748

- 17.1 Introduction, 749
- 17.2 Unified Life-Cycle Cost Engineering (ULCE), 750
 - 17.2.1 Design and Analysis Costs, 751
 - 17.2.2 Manufacturing Costs, 751
 - 17.2.3 Operating Costs, 751
 - 17.2.4 Cost of Disposal, 752
 - Case Study: Cost Consideration in Materials Selection, 752
- 17.3 Material and Process Selection, 754
 - 17.3.1 Databases for Material Selection, 755
 - 17.3.2 Materials and Process Standards, 755
 - 17.3.3 Impact of Material Selection on the Environment, 757
 - Case Study: Material Selection for Electronic Package Casing, 760
 - Case Study: Material Selection for a Nuclear Waste Container, 763
 - Case Study: Development of Lead-Free, Free-Cutting Copper Alloy, 764

- 17.4 Risk Assessment and Product Liability, **768**
 - 17.4.1 Failure Probability Estimation, **769**
 - 17.4.2 Liability Assessment, **771**
 - 17.4.3 Quality Assurance Criteria, **771**
 - Case Study: Inspection Criterion for Large Industrial Fans, **772**
- 17.5 Failure Analysis and Prevention, **774**
 - 17.5.1 General Practice in Failure Analysis, **774**
 - Case Study: Failure Analysis of Seam-Welded Steam Pipes, **778**
 - Case Study: Failure in Wire Bonds in Electronic Circuits, **781**
 - Case Study: Failure in a Polyethylene Pipe, **782**
 - 17.5.2 Failure Analysis in Composite Materials, **783**
 - 17.5.3 Failure Prevention, **786**
 - Case Study: Inspection Interval Estimation for an Aerospace Pressure Vessel, **786**

- Case Study: Choosing Optimum Locations for Probes during Ultrasonic Testing, **790**
- Summary, **791**
- Homework Problems, **792**

APPENDICES

- A Periodic Table of the Elements, **796**
- B Physical and Chemical Data for the Elements, **798**
- C Atomic and Ionic Radii of the Elements, **801**
- D Mechanical Properties, **803**

- Glossary, **818**
- References, **830**
- Index, **832**
