

CONTENTS

Foreword	ix
Chapter 1 Introduction to Materials: Selected Characteristics	
1-1 Structure → Properties	3
1-2 Mechanical behavior	5
1-3 Thermal characteristics	12
1-4 Response to electrical fields	15
1-5 Measurement of properties	17
Review and study	21
Chapter 2 Introduction to Materials: Review of Chemical Bonding	
2-1 Individual atoms.	29
2-2 Strong bonding forces	34
2-3 Molecules.	40
2-4 Secondary bonding forces	45
2-5 Interatomic distances	48
2-6 Coordination number	53
2-7 Types of materials	56
Review and study	59
Chapter 3 Atomic Order in Solids	
3-1 Crystallinity	67
3-2 Crystal systems	68
3-3 Cubic crystals	71
3-4 Hexagonal crystals	75
3-5 Polymorphism	77
3-6 Multiple-atom lattice sites	78
3-7 Crystal directions	80
3-8 Crystal planes	83
•3-9 X-ray diffraction	88
Review and study	91

Chapter 4 Atomic Disorder in Solids

4-1	Impurities in solids	101
4-2	Solid solutions in metals	101
4-3	Solid solutions in compounds	104
4-4	Imperfections in crystals	107
4-5	Noncrystalline materials	114
4-6	Atomic vibrations	118
4-7	Atomic rearrangements	123
	Review and study	129

Chapter 5 Electron Transport in Solids

5-1	Charge carriers	139
5-2	Metallic conductivity	140
5-3	Insulators	145
5-4	Intrinsic semiconductors	146
5-5	Extrinsic semiconductors	154
• 5-6	Semiconducting devices	158
	Review and study	161

Chapter 6 Single-Phase Metals

6-1	Single-phase alloys	169
6-2	Polycrystalline microstructures	172
6-3	Elastic deformation	176
6-4	Plastic deformation of metal single crystals	180
6-5	Deformation of polycrystalline metals (low temperatures)	187
6-6	Properties of plastically deformed metals	188
6-7	Recrystallization	191
6-8	Deformation of polycrystalline metals (high temperatures)	195
• 6-9	Fracture	197
• 6-10	Radiation damage	201
	Review and study	204

Chapter 7 Molecular Phases

7-1	Giant molecules	213
7-2	Lineal molecules	219
7-3	Molecular irregularities	225
7-4	Three-dimensional polymers	231
7-5	Deformation of polymers	234
7-6	Electrical behavior of polymers	241
7-7	Stability of polymers	244
	Review and study	249

Chapter 8 Ceramic Materials

8-1	Ceramic phases	259
8-2	Ceramic crystals (AX)	260

8-3	Ceramic crystals (A_mX_p)	262
8-4	Multiple compounds	266
•8-5	Silicate structures	267
8-6	Glasses	272
8-7	Electromagnetic behavior of ceramics.	274
8-8	Mechanical behavior of ceramics	284
	Review and study	290

Chapter 9 Multiphase Materials: Equilibria

9-1	Qualitative phase relationships.	299
9-2	Phase diagrams	303
9-3	Chemical compositions of phases	307
9-4	Quantities of phases	310
9-5	Commercial alloys and ceramics	314
9-6	Phases of the iron – carbon system	320
9-7	The Fe–Fe ₃ C phase diagram	322
9-8	Austenite decomposition	326
9-9	Plain-carbon and low-alloy steels	328
	Review and study	332

Chapter 10 Multiphase Materials: Microstructures and Properties

10-1	Solid-phase reactions	341
10-2	Multiphase microstructures	347
10-3	Interactive properties	353
	Review and study	359

Chapter 11 Thermal Processing of Multiphase Materials

11-1	Reaction rates	367
11-2	Annealing and homogenization treatments	374
11-3	Precipitation processes	378
11-4	$\gamma \rightarrow (\alpha + \bar{C})$ reaction rates.	382
11-5	Commercial steel-treating processes	390
•11-6	Hardenability.	394
	Review and study	401

Chapter 12 Corrosion of Metals

12-1	Electroplating: corrosion in reverse	411
12-2	Galvanic couples (cells)	413
12-3	Types of galvanic cells	418
•12-4	Corrosion rates	424
12-5	Corrosion control	428
	Review and study	434

Chapter 13 Composite Materials

13-1	Agglomerated materials.	441
13-2	Surface modifications	451
13-3	Reinforced materials	454
13-4	Wood	457
	Review and study	460

Appendices

A	Constants and conversions	466
B	Table of selected elements	468
C	Properties of selected engineering materials (20°C)	470
D	Glossary of terms as applied to materials.	472

	Index	489
