

CONTENTS

1. Introduction to Enamelling	1
1.1 History of Enamelling	1
1.2 Large-scale Enamelling	2
1.3 Applications of Vitreous Enamel	4
1.4 Types of Enamel	6
1.5 The Enamelling Industry	7
1.6 Advantages and Disadvantages of Vitreous Enamelling	8
1.7 References	9
2. Frits, Composition and Properties	10
2.1 Introduction	10
2.2 Composition and Structure of Glasses and Enamels	10
2.3 Crystallisation	13
2.4 Properties of Glasses and Enamels	15
2.5 Composition of Enamels	18
2.6 Enamels for Cast Iron	28
2.7 Frits for Non-ferrous Use	31
2.8 References	32
3. Preparation of Frits for Application	33
3.1 Raw materials	33
3.2 Smelting of Frit	34
3.3 Frit Testing	36
3.4 Milling of Enamel	37
3.5 Mill Additions	40
3.6 References	49
4. Metals for Enamelling	50
4.1 Selection of Metals	50
4.2 Ferrous Metals	52
4.3 Aluminium	61
4.4 References	61

5. Preparation of Metal for Enamelling	62
5.1 Sheet Steel	62
5.2 Cast Iron	76
5.3 Aluminium	77
5.4 Copper	77
5.5 Effluent Disposal	78
5.6 References	78
6. Application and Fusing of Enamel	79
6.1 Dry Application	79
6.2 Wet Application	80
6.3 Dry Electrostatic Application	83
6.4 Electrodeposition	84
6.5 Fusing of Enamel	86
6.6 De-enamelling	89
6.7 References	91
7. Enamelling Reactions	92
7.1 Introduction	92
7.2 Direct-on Enamelling	92
7.3 Ground-coat Enamelling	97
7.4 Mechanisms of Enamel Adhesion	98
7.5 Discussion	100
7.6 References	100
8. New Developments	101
8.1 Introduction	101
8.2 New Enamels	102
8.3 New Enamelling Methods	104
8.4 New Applications	105
8.5 New Ideas	106
8.6 References	107
Index	109
