

**CONTENTS**

Introduction: Ceramic Microstructures.	1
<b>PART ONE CERAMIC MICROSTRUCTURES THEIR ANALYSIS</b>	<b>23</b>
1. Quantitative Relationships for Random Microstructures.	25
2. Estimation of Microstructural Properties in the Presence of Anisotropy.	53
3. Application of Computers to Quantitative Analysis of Microstructures.	71
4. Optical Microscopy in Ceramic Engineering.	121
5. Transmission Electron Microscopy of Ceramics.	161
6. Sample Preparation for Ceramic Microstructural	187
7. Quantitative Determination and Analysis of Texture.	207
8. Analysis of the Nature of Grain Boundaries in Ceramics.	231
9. Surfaces in NaCl-Type Materials.	253
10. Solid Solution Study of Titanium Oxide in $\alpha$ -Alumina.	267
11. A Microbeam Probe Mass Spectrometer Applied to Ceramic Microstructure.	277
12. Grain Boundary Impurities.	289
13. Ceramic Surfaces and Relationship to Internal Microstructures.	297
<b>PART TWO CERAMIC MICROSTRUCTURES THEIR SIGNIFICANCE</b>	<b>311</b>
14. Elasticity of Ceramic Systems.	313
15. Mechanical Properties of Continuous Matrix, Dispersed Phase Ceramic Systems.	343
16. Mechanical Behavior of Polycrystalline Ceramics.	379
17. Effect of Microstructure on Deformation of Ceramics	406
18. Strength of Commercial Ceramics.	431
19. Microstructural Considerations in Ferromagnetic Ceramics.	443
20. Effect of Microstructure on Ferroelectric and Piezoelectric Properties.	475
21. Superconductivity of Ceramic Compounds.	489
22. Microstructural Considerations in Gas Permeation.	509
23. The Importance of Microstructural Considerations in the Performance of Steel Plant Refractories.	522
24. Triaxial Porcelains – Strength and Microstructural Relations.	559
25. The Structure of Explosively Shocked MgO Crystals.	572
26. Strength and Fracture of Dense MgO.	579
27. The Examination of Polycrystalline MgO By Transmission Electron Microscopy,	594
28. Microstructural Effects in Irradiated Uranium Dioxide Due to the Formation of Fission Products.	603
29. Structure-Sensitive Properties of Arc-Melted Carbides.	620
30. Oxygen Permeation through Alumina – Influence of Microstructure and Purity.	636
31. Grain Boundary Reactions During Deformation.	646

<b>PART THREE CERAMIC MICROSTRUCTURES THEIR PRODUCTION</b>	<b>657</b>
32. Development of Microstructure in Ceramic Systems.	658
33. Grain Growth.	681
34. Densification of Single-Phase Systems under Pressure.	701
35. Phase Distribution in Ceramics.	728
36. Microstructures Developed from Fusion Casting.	763
37. Some Effects of Powder Characteristics on Densification and Microstructure.	800
38. Microstructure of Complex Ceramics.	828
39. Preparation, Microstructure, and Properties of Inorganic Fibrous Composite Materials.	863
40. Microstructures Developed on Crystallized Glass Ceramics.	900
41. Utilization of Microstructure in Processing.	923
42. Microstructures Developed in Ceramic Nuclear Fuel.	947
43. Grain Growth in Ultra-High-Pressure Sintered MgO.	958
44. Analysis and Significance of Rare Earth Oxides Produced by a Sol-Gel Method.	969
45. Interdependence of the Density and Grain Growth of Sintered Stoichiometric UO <sub>2</sub>	975
 INDEX	 981
