**Preface** xvii

**Foreword** by Michel Barsoum xxiii

**About the Authors** xxv

## Section One Fundamentals of Nature and Characteristics of Ceramics

### 1. Ceramics: Definition and Characteristics 3

---

- 1.1 Materials Classification 3
- 1.2 Historical Perspective; Definition and Classification of Ceramics 4
- 1.3 Properties of Structural Ceramics 8
- 1.4 Applications of Structural Ceramics 9
- References 12

### 2. Bonding, Structure, and Physical Properties 14

---

- 2.1 Primary Bonding 15
  - 2.1.1 Ionic Bonding 15
  - 2.1.2 Covalent Bonding 18
  - 2.1.3 Pauling's Rules 19
  - 2.1.4 Secondary Bonding 21
- 2.2 Structure 21
  - 2.2.1 NaCl-type Rock-Salt Structure 22
  - 2.2.2 ZnS-Type Wurtzite Structure 22
  - 2.2.3 ZnS-Type Zinc Blende Structure 23
  - 2.2.4 CsCl Cesium Chloride Structure 23
  - 2.2.5 CaF<sub>2</sub> Fluorite Structure 23
  - 2.2.6 Antifluorite Structure 24
  - 2.2.7 Rutile Structure 24
  - 2.2.8 Al<sub>2</sub>O<sub>3</sub> Corundum Structure 24
  - 2.2.9 Spinel Structure 25
  - 2.2.10 Perovskite Structure 26
  - 2.2.11 Ilmenite Structure 26
  - 2.2.12 Silicate Structures 26

2.3 Oxide Ceramics 28  
2.4 Non-Oxide Ceramics 30  
References 33

**3. Mechanical Behavior of Ceramics**

---

3.1 Theory of Brittle Fracture 34  
    3.1.1 Theoretical Cohesive Strength 34  
    3.1.2 Inglis Theory 35  
    3.1.3 Griffith's Theory 37  
    3.1.4 Irwin's Theory 39  
    3.1.5 Concept of Fracture Toughness 39  
3.2 Cracking in Brittle Materials 40  
3.3 Strength Variability of Ceramics 42  
3.4 Physics of the Fracture of Brittle Solids 42  
    3.4.1 Weakest Link Fracture Statistics 44  
3.5 Basic Mechanical Properties 48  
    3.5.1 Vickers Hardness 48  
    3.5.2 Instrumented Indentation Measurements 48  
    3.5.3 Compressive Strength 50  
    3.5.4 Flexural Strength 51  
    3.5.5 Elastic Modulus 52  
    3.5.6 Fracture Toughness 53  
        3.5.6.1 Long Crack Methods 54  
        3.5.6.2 Fracture Toughness Evaluation Using Indentation  
                Cracking 55  
3.6 Toughening Mechanisms 59  
References 63

**Section Two Processing of Ceramics**

**4. Synthesis of High-Purity Ceramic Powders**

---

4.1 Synthesis of  $ZrO_2$  Powders 67  
4.2 Synthesis of  $TiB_2$  Powders 68  
4.3 Synthesis of Hydroxyapatite Powders 70  
4.4 Synthesis of High-Purity Tungsten Carbide Powders 71  
References 75

**5. Sintering of Ceramics**

---

5.1 Introduction 76  
5.2 Classification 78  
5.3 Thermodynamic Driving Force 79

5.4	Solid-State Sintering	82
5.5	Competition between Densification and Grain Growth	84
5.6	Liquid-Phase Sintering	88
5.7	Important Factors Influencing the Sintering Process	90
5.8	Powder Metallurgical Processes	92
5.8.1	Ball Milling	92
5.8.2	Compaction	94
5.8.2.1	Cold Pressing	94
5.8.2.2	Cold Isostatic Pressing	96
5.8.3	Pressureless Sintering	97
5.8.4	Reactive Sintering	98
5.8.5	Microwave Sintering	99
References		103

## 6. Thermomechanical Sintering Methods

105

6.1	Hot Pressing	105
6.2	Extrusion	108
6.3	Hot Isostatic Pressing	110
6.4	Hot Rolling	112
6.5	Sinter Forging	114
6.6	Spark Plasma Sintering	116
References		118

## Section Three Surface Coatings

### 7. Environment and Engineering of Ceramic Materials

123

7.1	Environmental Influence on Properties of Engineering Ceramics	124
7.1.1	Oxidation Resistance	125
7.1.2	Corrosion Resistance	126
7.1.3	Creep Resistance	126
7.1.4	Hard Bearing Surfaces	126
7.1.5	Thermal and Electrical Insulation	126
7.1.6	Abrasion-Resistant Ceramics	127
7.1.7	Fretting Wear Resistance, Surface Fatigue, Impact Resistance	127
7.1.8	Erosion and Cavitation Resistance	127
7.2	Classification and Engineering of Ceramic Materials	128
7.2.1	Non-Oxide Ceramics	128
7.2.2	Oxide Ceramics	132

References		135
------------	--	-----

**8. Thermal Spraying of Ceramics****137**

---

8.1	Mechanism of Thermal Spraying	137
8.1.1	Advantages of Thermal Spraying	140
8.1.2	Disadvantages of Thermal Spraying	141
8.2	Classification of Thermal Spraying	141
8.2.1	Combustion Thermal Spraying	142
8.2.1.1	Flame (Powder or Wire) Spraying	142
8.2.1.2	High-Velocity Oxy-Fuel Spraying	144
8.2.1.3	Detonation Spray Technique	145
8.2.2	Electric Arc Spraying	148
8.2.3	Cold Spraying	149
8.2.4	Plasma Spraying	150
8.2.4.1	Atmospheric Plasma Spraying	152
8.2.4.2	Vacuum Plasma Spraying	154
8.3	Splat Formation and Spread	154
8.4	Near Net Shape Forming	156
8.5	Overview	157
	References	158

**9. Coatings and Protection of Structural Ceramics****160**

---

9.1	Coatings	160
9.2	Protective Coatings	162
9.2.1	Biological Applications	162
9.3	Rocket Nozzle Inserts	163
9.4	Thermal Barrier Coatings	165
9.5	Wear Resistance	166
9.6	Corrosion Protection by Ceramics	168
9.7	Optically Transparent Ceramics	169
9.8	Ceramic Pottery and Sculptures	169
	References	170

**Section Four Processing and Properties of Toughened Ceramics****10. Toughness Optimization in Zirconia-Based Ceramics****175**

---

10.1	Introduction	175
10.2	Transformation Characteristics of Tetragonal Zirconia	176
10.3	Phase Equilibria and Microstructure	177

10.4	Transformation Toughening	178	
10.4.1	Thermodynamics of Transformation	179	
10.4.2	Micromechanical Modeling	180	
10.5	Stabilization of Tetragonal Zirconia	182	
10.6	Production and Properties of Y-TZP Ceramics	183	
10.7	Different Factors Influencing Transformation Toughening	184	
10.7.1	Grain Size	187	
10.7.2	Grain Shape and Grain Boundary Phase	188	
10.7.3	Yttria Content	192	
10.7.4	Yttria Distribution	193	
10.7.5	$M_S$ Temperature	197	
10.7.6	Transformation Zone Size and Shape	197	
10.7.7	Residual Stress	199	
10.8	Additional Toughening Mechanisms	199	
10.8.1	Stress-Induced Microcracking	200	
10.8.2	Ferroelastic Toughening	201	
10.9	Coupled Toughening Response	203	
10.10	Toughness Optimization in Y-TZP-Based Composites	203	
10.10.1	Influence of Thermal Residual Stresses	206	
10.10.2	Influence of Zirconia Matrix Stabilization	207	
10.11	Outlook	208	
	References	208	

## **11. S-Phase SiAlON Ceramics: Microstructure and Properties** **215**

---

11.1	Introduction	215	
11.2	Materials Processing and Property Measurements	216	
11.3	Microstructural Development	217	
11.4	Mechanical Properties	220	
11.4.1	Load-Dependent Hardness Properties	226	
11.4.2	R-Curve Behavior	228	
11.5	Concluding Remarks	230	
	References	232	

## **12. Toughness and Tribological Properties of MAX Phases** **234**

---

12.1	Emergence of MAX Phases	234	
12.2	Classification of MAX Phases	235	
12.3	Damage Tolerance of MAX Phases	238	

## xii Contents

12.4	Wear of $Ti_3SiC_2$ MAX Phase	244
12.5	Concluding Remarks	254
References		254

## Section Five High-Temperature Ceramics

### 13. Overview: High-Temperature Ceramics 259

---

13.1	Introduction	259
13.2	Phase Diagram and Crystal Structure	260
13.3	Processing, Microstructure, and Properties of Bulk $TiB_2$	261
13.3.1	Preparation of $TiB_2$ Powder	261
13.3.2	Densification and Microstructure of Binderless $TiB_2$	265
13.4	Use of Metallic Sinter-Additives on Densification and Properties	269
13.5	Influence of Nonmetallic Additives on Densification and Properties	271
13.6	Important Applications of Bulk $TiB_2$ -Based Materials	281
13.7	Concluding Remarks	281
References		283

### 14. Processing and Properties of $TiB_2$ and $ZrB_2$ with Sinter-Additives 286

---

14.1	Introduction	286
14.2	Materials Processing	287
14.3	$TiB_2$ - $MoSi_2$ System	288
14.3.1	Densification, Microstructure, and Sintering Reactions	288
14.3.2	Mechanical Properties	288
14.3.3	Depth Sensing Instrumented Indentation Response	290
14.3.4	Residual Strain-Induced Property Degradation	293
14.3.5	Relationship between Indentation Work Done and Phase Assemblage	295
14.4	$TiB_2$ - $TiSi_2$ System	296
14.4.1	Sintering Reactions and Densification Mechanisms	296
14.4.2	Mechanical Properties	298
14.4.3	Residual Stress or Strain and Property Degradation	298
14.5	$ZrB_2$ - $SiC$ - $TiSi_2$ Composites	300
14.6	Concluding Remarks	301
References		302

**15. High-Temperature Mechanical and Oxidation Properties** **305**

15.1	Introduction	305	
15.2	High-Temperature Property Measurements	309	
15.3	High-Temperature Mechanical Properties	310	
	15.3.1 High-Temperature Flexural Strength	310	
	15.3.2 Hot Hardness Property	311	
15.4	Oxidation Behavior of $\text{TiB}_2\text{-MoSi}_2$	312	
15.5	Oxidation Behavior of $\text{TiB}_2\text{-TiSi}_2$	315	
	15.5.1 Oxidation Kinetics	315	
	15.5.2 Morphological Characteristics of Oxidized Surfaces	317	
15.6	Concluding Remarks	317	
	References	318	

**Section Six Nanoceramic Composites****16. Overview: Relevance, Characteristics, and Applications of Nanostructured Ceramics** **323**

16.1	Introduction	323	
16.2	Problems Associated with Synthesis of Nanosized Powders	326	
	16.2.1 Methods of Synthesis of Nanoscaled Ceramic Powders	326	
	16.2.2 Challenges Posed by the Typical Properties of Nanoscaled Powders	327	
16.3	Challenges Faced during Processing	328	
	16.3.1 Problems Arising due to Fine Powders	328	
	16.3.2 Challenges Faced due to Agglomerated Powders	329	
16.4	Processing of Bulk Nanocrystalline Ceramics	330	
	16.4.1 Processes Used for Developing Bulk Nanocrystalline Ceramics	330	
	16.4.2 Mechanisms Leading to Enhanced Sintering Kinetics on Pressure Application	331	
16.5	Mechanical Properties of Bulk Ceramic Nanomaterials	332	
	16.5.1 Mechanical Properties	332	
	16.5.1.1 Hardness and Yield Strength	332	
	16.5.1.2 Fracture Strength and Fracture Toughness	335	
	16.5.1.3 Superplasticity	338	

**xiv** Contents

16.6 Applications of Nanoceramics 339  
16.7 Conclusion and Outlook 341  
References 343

**17. Oxide Nanoceramic Composites** 347

---

17.1 Overview 347  
17.2 Al<sub>2</sub>O<sub>3</sub>-Based Nanocomposites 349  
17.3 ZrO<sub>2</sub>-Based Nanocomposites 355  
17.4 Case Study 356  
    17.4.1 Yttria-Stabilized Tetragonal Zirconia Polycrystal Nanoceramics 356  
    17.4.2 ZrO<sub>2</sub>-ZrB<sub>2</sub> Nanoceramic Composites 357

References 363

**18. Microstructure Development and Properties of Non-Oxide Ceramic Nanocomposites** 366

---

18.1 Nanocomposites Based on Si<sub>3</sub>N<sub>4</sub> 366  
18.2 Other Advanced Nanocomposites 371  
    18.2.1 Mullite-SiC 371  
    18.2.2 Yttrium Aluminum Garnet-SiC 371  
    18.2.3 SiC-TiC 371  
    18.2.4 Hydroxyapatite-ZrO<sub>2</sub> Nanobiocomposites 371  
    18.2.5 Stress-Sensing Nanocomposites 372  
18.3 WC-Based Nanocomposites 372  
    18.3.1 Background 372  
    18.3.2 WC-ZrO<sub>2</sub> Nanoceramic Composites 375  
    18.3.3 WC-ZrO<sub>2</sub>-Co Nanocomposites 380  
    18.3.4 Toughness of WC-ZrO<sub>2</sub>-Based Nanoceramic Composites 384  
    18.3.5 Comparison with Other Ceramic Nanocomposites 385

References 387

**Section Seven Bioceramics and Biocomposites**

**19. Overview: Introduction to Biomaterials** 393

---

19.1 Introduction 393  
19.2 Hard Tissues 394  
19.3 Some Useful Definitions and Their Implications 395  
    19.3.1 Biomaterial 395  
    19.3.2 Biocompatibility 397  
    19.3.3 Host Response 397

19.4	Cell–Material Interaction	398
19.5	Bacterial Infection and Biofilm Formation	400
19.6	Different Factors Influencing Bacterial Adhesion	402
19.6.1	Material Factors	404
19.6.2	Bacteria-Related Factors	405
19.6.3	External Factors	406
19.7	Experimental Evaluation of Biocompatibility	406
19.8	Overview of Properties of Some Biomaterials	413
19.8.1	Coating on Metals	413
19.8.2	Glass-Ceramics-Based Biomaterials	417
19.9	Outlook	418
	References	419

## **20. Calcium Phosphate-Based Bioceramic Composites** **422**

---

20.1	Introduction	422
20.2	Bioinert Ceramics	424
20.3	Calcium Phosphate-Based Biomaterials	425
20.4	Calcium Phosphate–Mullite Composites	428
20.4.1	Mechanical Properties	430
20.4.2	Biocompatibility ( <i>In Vitro</i> and <i>In Vivo</i> )	431
20.5	Hydroxyapatite–Ti System	434
20.6	Enhancement of Antimicrobial Properties of Hydroxyapatite	434
20.6.1	Hydroxyapatite–Ag System	437
20.6.2	Hydroxyapatite–ZnO System	439
	References	443

## **21. Tribological Properties of Ceramic Biocomposites** **448**

---

21.1	Introduction	448
21.2	Tribology of Ceramic Biocomposites	449
21.3	Tribological Properties of Mullite-Reinforced Hydroxyapatite	450
21.3.1	Materials and Experiments	451
21.3.2	Effect of Lubrication on the Wear Resistance of Mullite-Reinforced Hydroxyapatite	451
21.3.3	Surface Topography of Mullite-Reinforced Hydroxyapatite after Fretting Wear	454
21.4	Tribological Properties of Plasma-Sprayed Hydroxyapatite Reinforced with Carbon Nanotubes	454
21.4.1	Bulk Wear Resistance of Hydroxyapatite Reinforced with Carbon Nanotubes	454

**xvi** Contents

21.4.2	Nanomechanical Properties of Hydroxyapatite Reinforced with Carbon Nanotubes	457
21.4.3	Nanoscratching of Hydroxyapatite Reinforced with Carbon Nanotubes	461
21.5	Laser Surface Treatment of Calcium Phosphate Biocomposites	461
	References	470
