

CONTENTS

1	Introduction	1
1.1	General	1
1.2	Development of XRF Procedures	2
1.3	Effect of XRF on the Reported Results	5
1.4	Purpose of The Book	7
1.5	Relation of XRF to Other Instrumental Techniques	8
1.6	Contents of the Book	9
	References	11
2	Apparatus and Equipment	13
2.1	Introduction	13
2.2	Sampling	13
2.3	Sample Preparation	13
	Jaw crushing fine grinding, sample splitting	
2.4	Drying	21
2.5	Weighing	22
2.6	Heating	24
	Gas burners Furnaces	
2.7	Platinum Ware	27
	Size and shape, care and maintenance	
2.8	Selection of spectrometer	31
	Type	
2.9	Computer	35
	Hardware, software	
2.10	Reagents and Blank Determinations	36
3	determination of Non-XRF Elements	39
3.1	Introduction	39
3.2	Methods for Non-XRF elements	41
3.2.1	determination of Borate	41
3.2.2	Determination of Sulphur	42
3.2.3	Determination of Carbon	43
3.2.4	Determination of Lithia	44
3.2.5	Determination of Halogens	44
3.2.6	Determination of Selenium	44
3.2.7	Determination of Volatile or Alloying Elements	45
	References	46

4	Loss on Ignition	47
4.1	Introduction	47
4.2	Chemical Changes due to Heating	50
4.3	The Effect of Composition	51
4.4	The Evolution of Volatiles	55
	Water, carbon dioxide, sulphur gases, halogens	
4.5	Conclusion	64
5	Decomposition of Samples by Fusion	67
5.1	Introduction	67
5.2	Choice of Flux	69
	Theory of suitability	
5.3	Dilution of Sample in Flux	72
5.4	Standards and Samples	75
	Standards	
5.5	Casting	79
	Effect of weight of cast bead	
5.6	Fusion of Non-oxide Materials	81
5.7	Chrome-bearing Materials	85
5.8	Problem Elements	88
	Reducible, volatile, concentration limited	
5.9	Dilution	91
	References	93
6	selection of Instrument Parameters	95
6.1	Introduction	95
6.2	X-ray Tubes	96
6.3	X-ray Tube Parameters	97
6.4	Instrument Masks	101
6.5	Sample Masks	101
6.6	Primary Collimator	102
6.7	Crystals	102
6.8	Detectors	103
6.9	Flow Counter Windows	103
6.10	Pulse-height Settings	104
	References	104
	Recommended Reading	104

7	Element Lime Selection	105
7.1	Introduction	105
7.2	The Eight Common Oxides	107
	Silica, titania, alumina, ferric oxide, lime, magnesia, potash, soda	
7.3	Other Oxides/Elements	113
	Fluorine, phosphorus pentoxide, sulphur trioxide, chlorine; oxide of scandium, chromium manganese, cobalt, nickel, copper, zinc, gallium, germanium and arsenic; bromine; oxide of rubidium, strontium, yttrium, zirconium, niobium, molybdenum, cadmium, tin and antimony; iodine; oxides of caesium, barium, lanthanum, cerium, praseodymium, neodymium samarium, gadolinium, ytterbium, hafnium, tantalum, tungsten, lead, bismuth, thorium and uranium	
8	The Standard Procedure	145
8.1	Introduction	145
8.2	Determination of the Loss on Ignition	146
8.3	Preparation of the Bead	148
	Criteria, fusion, casting, cooling, automatic preparation	
8.4	Presentation of the Bead	153
8.5	The Remainder of the Method	153
9	Calibration	155
9.1	Introduction	155
9.2	Standards	157
9.3	Calibration	158
	Establishing calibration curves, composition of Standard beads, checking the calibration curves, presentation of standard beads, determination of line interference, determination of inter-element effects	
9.4	Notes on Calibration	168
	Determination of x-coefficients	
9.5	Systematizing Calibrations and Fusions	169
	Unifying calibration and fusion systems; base calibration: silica/alumina, limestone, high magnesia, zirconia, alternative approaches; standard methods	
10	Presentation of the sample Bead and Completion of the Analysis	177
10.1	Pre-presentation Treatment	177
10.2	Presentation of the Bead	178
10.3	Calculation of the Results	179
	Correction for tungsten carbide contamination	

11 Routine Techniques for Material Types	185
11.1 Introduction	185
11.2 'Normal' Experimental Conditions	186
Typical materials, sample preparation, drying, weighing, loss on ignition, fusion, casting, oxides to determined, calibration ranges, reporting of results	
12 Procedures for Silica/Alumina Range Materials	193
13 Procedures for Calcium-rich Materials	201
13.1 Calcium Silicates	201
13.2 Calcium with Silica and Phosphate (Bone China Bodies)	203
13.3 Calcium/Phosphorus Pentoxide	204
13.4 Calcium/Fluorine	206
13.5 Calcium/Carbon Dioxide with/without Magnesium: Dolomite and Limestone	210
14 Procedures for Magnesium-rich Materials	215
14.1 Magnesium Hydroxides, Oxides or Carbonates	215
14.2 Magnesium Silicates	217
14.3 Magnesia/Chrome-bearing Materials	219
15 Procedures for Zircon-bearing Materials	223
16 Procedures for Various Oxides and Titanates	227
17 Procedures for Glasses, Glazes and Frits	231
18 Procedures for Reduced Materials	239
18.1 Introduction	239
18.2 Typical Materials	240
18.3 General Procedure	240
18.4 Silicon-bearing Materials	242
18.5 Silicon Carbide	243
18.6 Silicon Nitride	245
18.7 Silicon (Metal)	246
18.8 Sialons	247
18.9 Ferro-alloys	247
18.10 Boron Carbide; Boron Nitride	248
References	249

19 Procedures for Samples of Unknown Composition	251
19.1 Introduction	251
19.2 Typical Materials	252
19.3 Basic Procedure	253
19.4 Variants in Procedure	255
Glasses and Glazes (see Chapter 17)	
Vitreous Enamels, etc	255
Slags	258
Kiln Deposits	259
Appendix I Loss on Ignition Techniques	261
Appendix II Specific Fusion Techniques	267
Appendix III Problem Elements or Oxides	271
Appendix IV Certified Reference Materials	273
Appendix V Laboratory Accreditation	287
Index	291
