

CONTENTS

Welcome and Opening	1
The Impact of the High Temperature Ceramics in Industrial Growth in the Community	4
Session: 1 Mechanical/Structural Features.	
Ceramics for Future Automotive Power Plants.	10
Non Oxide Ceramics (Silica Carbide, Silicon Nitride, Sialon).	23
Transformation-Toughened Ceramics (TTC).	51
Cracking Resistance of Alumina-Based Polyphase Ceramics.	87
Mechanical Properties and engineering Design with Ceramics.	98
Engineering of Refractory Structures.	120
Joining of Ceramics for High Temperature Applications.	138
Nondestructive Testing of Ceramics.	157
Session 2: Thermal/Physical Features.	
On the Use Ceramics in diesel Engines.	178
Recuperative Ceramic Heat Exchanger.	208
SiSiC – A Material for High Temperature Ceramics Heat Exchangers.	231
MHD Systems	250
Session 3: Chemical Features.	
Refractories on Coal Gasification Plants.	263
Refractories for Coal Gasification. The State-of-the-Art in the U.S.	283
Refractories problems in Coal Gasifiers.	318
Thermodynamic Aspects of the Application of Ceramics/Refractories in Advanced Energy Technology.	348
Inorganic, Porous Membranes Preparation, Structure and Potential Applications.	367
Session 4: Electrical and Electronics Features.	
Ceramic Materials for Electrochemical Energy Conversion Devices.	386
Beta-Alumina for-Sodium-Sulphur Batteries.	413
Ceramics for Sensors and Monitors.	469
Production of Zirconia Fibers from Sol-Gel for Water Electrolysis Application.	501
Final session:	
Ceramic Fabrication.	518
Panel Discussion	526
Post-Colloquium Workshop Conclusions	534
List of participants	537
