

CONTENTS

<b>PART A</b>		
Overview		
1	The Structural Performance of Ceramic Matrix Composites	3
<b>PART B</b>		
Short-Term Behavior		
2	Strength and Toughness of Ceramic Composites at Elevated Temperatures	84
3	Dynamic and Impact Fractures of Ceramic Composites at Elevated Temperature	121
<b>PART C</b>		
Long-Term Behavior		
4	Creep Deformation of Particulate-Reinforced Ceramic Matrix Composites	155
5	Elevated Temperature Creep Behavior of Continuous Fiber-Reinforced Ceramic	193
6	Fatigue Behavior of Continuous Fiber-Reinforced Ceramic Matrix Composites	261
7	High Temperature Crack Growth in Unreinforced and Whisker-Reinforced Ceramics Under Cyclic Loads	327
<b>PART E</b>		
Modeling		
9	Models for the Creep of Ceramic Matrix Composites Materials	409
10	Macro-and Micromechanics of Elevated Temperature Crack Growth in Ceramic Composites	437
11	Reliability and Life Prediction of Ceramic Composite Structure at Elevated Temperatures	471
<b>PART F</b>		
Elevated Temperature Mechanical Testing		
12	Critical Issues in Elevated Temperature Testing of Ceramic Matrix Composites	519
	Index	551
