

CONTENTS

The Interrelation of Ceramics, Metallurgy, Chemistry and Physics	1
Ceramic Problems for the Consideration of the Solid State Physicist	14
Properties and Crystal Structure of Materials	30
Crystal Chemistry in Research on Ionic Solids	45
Impurity Controlled Properties of Ionic in Solids	77
Transition Metal Ions in Solids	110
The Use of Pressure to Investigate the Electronic Structure of Ionic Crystals	131
Diffusion in Ionic Crystals	147
The Science and Technology of Sintering	165
Optical Properties of Ionic Crystals	179
The Chemical Approach to Semiconductors	196
Magnetic Properties of Ceramics	229
The Strength of Ceramic Crystals	240
Dislocation Theories of the High-Temperature Creep of Crystalline Solid	275
Effect of Microstructure on the Properties of Ceramics	286
Recent Developments in Nucleation Theory	311
Federal Sponsorship of Research in Ceramics	325
The Future of Ceramic Education	333
