

## CONTENTS

<b>2.1 GENERAL INTRODUCTION ON RHEOLOGY</b>	<b>1</b>
2.1.1 Some Rheological Terms	1
The Elastic Solid	5
The Viscous Liquid	5
Intermediate Materials	6
2.1.2 Viscosity: True, Apparent and Anomalous	7
2.1.3 Viscosity Measurement: True Liquids	10
The Capillary Viscometer	10
The Rotational Viscometer	13
The Falling-sphere Viscometer	16
2.1.4 Rheological Measurements on non Newtonian Materials	17
2.1.5 The Viscosity of Suspensions	20
Suspensions of Non-attracting Particles	20
Suspensions of Attracting Particles	23
Rheological Measurements on Thixotropic and Dilatant Suspensions	25
<b>2.2 CERAMIC SUSPENSIONS</b>	<b>27</b>
2.2.1 General Description of Rheological Properties	27
2.2.2 Stability of Suspensions	36
2.2.3 Industrial Processes in involving Suspensions	37
Casting	37
Casting Control	40
Casting of Non-clay Materials	42
Filter-pressing	43
Glaze Application	43
<b>2.3 CERAMIC PASTES AND BODIES</b>	<b>45</b>
2.3.1 The Yield Stress	45
2.3.2 Assessment of Yield Stress	47
Cone Indentation	47
Extrusion	48
Compression	49
Torsion	50
2.3.3 Plasticity	51
2.3.4 Technical Plasticity	53

2.3.5	Plasticity Assessment	54
	Indirect Tests based on Moisture Content	54
	Indirect Tests based on Other Properties	57
	Direct Tests of Plasticity	58
2.3.6	Factors affecting Plasticity	66
	Rate of Strain	66
	De-airing	67
	Particle Size	67
	Particle Shape	67
	State of Deflocculation and Exchangeable Cations	67
	Surface Tension	68
	Ageing	68
2.3.7	Plasticity Requirements for Various Methods of Forming	68
2.3.8	Artificial Plasticizers	69
2.3.9	Fundamental Aspects of Plasticity	70
	Slip Lines	70
	Particle Orientation	72
	Segregation of Coarse and Fine Particles	72
	Separation of Solid and Liquid Phases	72
	Elasticity and Memory	74
	Cyclic Testing	75
	Suggestions for Further Reading	78
