

CONTENTS

THERMAL AND THERMOCHEMICAL ENVIRONMENTS

The Corrosion of Ceramic Oxides by Atmospheres Containing Sulphur and Oxygen.	1
Properties of Molten Ceramics.	11
Oxidation of Boron Nitride in an Arc Heated Jet.	27
Microstructural Features of Oxide Scales Formed on Zirconium Diboride Materials.	35
Testing of Graphite Composites in Arc at High Temperatures.	49
MgO Refractories in the Basic Oxygen Steelmaking Furnace.	57

THERMAL SHOCK ENVIRONMENTS

Thermal Stress Crack Stability and Propagation in Severe Thermal environments.	89
Optimum Properties of Zirconia Ceramics for High Performance Storage Heaters.	105
Thermal-Shock-Resistant Materials.	123
Factors Affecting the Thermal Shock Behavior of Yttria Stabilized Hafnia Based Graphite and Tungsten Composites.	137
The Resistance of Silicon Nitride to Thermal Shock and Other Hostile Environments.	149
Thermal Shock Resistant Zirconia Nozzles for Continuous Copper Casting.	163

CONCENTRATED STRESSES AND SEVERE MECHANICAL ENVIRONMENTS

Fracture Mechanisms of Very Strong Solids.	186
The Compressive Strength of Ceramics.	195
Oxide Ceramics in Metal Cutting Applications.	231
The Fracture Behavior of Carbon Fibre Reinforced Composites.	245
Effect of Microstructure on the Ballistic Performance of Alumina.	261
Fractography of High Boron Ceramics Subjected to Ballistic Loading.	271

THERMOMECHANICAL ENVIRONMENTS

Factors Influencing the Stress-strain Behavior of Ceramic Materials.	283
Creep Mechanisms in Ceramic Materials at Elevated Temperatures.	297
Deformation Behavior of Alumina at Elevated Temperatures.	315
Nonbasal Slip in Alumina at High Temperatures and Pressures.	331
Ceramic Fibres for the Reinforcement of Gas Turbine Blades.	341
The Effect of Nonstoichiometry on Creep of Oxides.	361
Panel on Commercial Refractories in Severe Environments: Introduction.	385
Chemical Properties of Refractories.	387
Physical properties of Refractories.	404
Relation of Properties of Refractories to BOF Use.	410

STRESS CORROSION AND HYDROSTATIC STRESS ENVIRONMENTS

Compatibility of Bioceramics with the Physiological Environment.	417
Static Fatigue in Glasses and Alumina.	435
The Behavior of Reactive Ceramics in Atmospheric Environments.	445
The Process of Hydrostatic Compaction of B ₂ O ₃ Glass.	461
Factors Influencing the Use of Ceramic Materials in Deep-Submergence Applications.	477

ELECTROMAGNETIC AND NUCLEAR RADIATION ENVIRONMENTS

Effects of Temperature on Electrical Conductivity and Transport Mechanisms in Sapphire.	489
Electrode and Insulation Materials in Magnetohydrodynamic Generators.	503
Interaction between High Energy Radiation and Glasses.	521
Damage to Ceramics from High Intensity Q Switched Lasers.	537
The Use of Computer Experiments to Predict Radiation Effects in Solid Materials.	553
Fast Neutron Effects in Glass-Ceramics and Amorphous Semiconductors.	575
Fabrication and Irradiation Behavior of Uranium Mononitride.	587
Subject Index	601
