

## CONTENTS

	Page
Introduction	1
A Survey of Embrittlement and Notch Sensitivity of Heat Resisting Steels	6
Discussion	21
Influence of Sharp Notches on the Stress-Rupture Characteristics of Several Heat-Resisting Alloys	25
Discussion	46
Effect of a Notch and of Hardness on the Rupture of "Discaloy"	49
Discussion	58
Notch Rupture Test on Inconel X and Nimonic 80A	59
Effect of Notch Geometry on Rupture Strength at Elevated Temperatures	67
Discussion	88
Investigations into the Influence of Notches on Creep Strength at High Temperatures	93
Theory of time-Dependent Rupture and Interpretation of Some Stress-Rupture	131
Discussion	138
The Effect of Grain Size Upon the Fatigue Properties at 80, 1200 and 1600 F of "Precision Cast" Alloy X-40	142
Discussion	160
Recovery and Creep in an Alloy Steel	163
Discussion	180
An Experimental Study of the Strength and Ductility of Steel at Elevated Temperatures	184
Discussion	222
Effect of Sigma on Strength and Ductility of 25 Cr, 20 Ni Steel	225
Discussion	236
The Structure and Properties of Stainless Steels After Exposure at Elevated Temperatures	237
Discussion	247
