

## CONTENTS

	Page
Foreword to English Edition	(vii)
Preface	(ix)
<b>I. THE MECHANICAL TESTING OF METALS</b>	<b>1</b>
General Concepts	1
Tensile Tests on Metals	1
Limit of Proportionality	3
Young's Modulus of Elasticity	4
Yield Point	5
Ultimate Tensile Strength	7
Absolute Residual Elongation	8
Relative Elongation	8
Relative Reduction of Area	9
Testpieces for Tensile tests on Metals	10
Tensile Testing Machines	14
Testing Metals in Compression	32
Torsion Tests on Metals	33
Machines for Testing Metals in Torsion	42
Acoustic & Radiotechnical Methods for Determination of the Young's Modulus E and the Rigidity Modulus G	45
Testing in Shear	47
Bend Testing	48
Bend Tests on Grey & Malleable Cast Iron	52
Micro-mechanical Tests	53
Impact Tests	55
Hardness Testing of Metals	63
The Hardened Ball Indentation (Brinell) Method	63
The Rockwell Method of Hardness Determination	72
Diamond Pyramid Hardness Testing	75
Universal Testing Machines for the Measurement of hardness	79
Determination of Microhardness	84
Tests for Endurance (Fatigue Strength)	89
Metal Testing at Elevated Temperatures	95
Tensile Tests	96
Torsion Tests	101
Tensile Impact Tests	102
Impact Bend Tests	102
Hardness Determination	103
Creep Tests	105
Tests for Rupture Strength	117
Relaxation Testing	119
<b>II. METHODS OF DETERMINING THE MECHANICAL PROPERTIES OF WELD METAL AND WELDED JOINTS</b>	<b>124</b>
<b>III. DETERMINATION OF THE TECHNOLOGICAL PROPERTIES OF METALS</b>	<b>134</b>
Determination of the Machinability of Metal from the Cutting Speed	134
Simplified Methods of Determining the Machinability of Metals	137
Tests for Hardenability	138
Determination of Hardenability for Hardness Distribution	139
Weldability Tests	141
Cracking Tendency of Steel and Weld Metal	141

Determination of Changes in the Properties of Steel in the Heat-Affected Zones	146
Miscellaneous Methods of Testing the Technological Properties of Metals	150
Testing of Tubes	155
References	159
