

# Contents

- /1 Constitution and structure of cast iron** 1  
Typical microstructures
- 2 Mechanical, physical and electrical properties of cast iron** 34  
Introduction: The tensile test: The transverse test: The compression test: The hardness test: Modulus of elasticity of cast iron: Poisson's ratio: Limit of proportionality: Proof stress: Shear strength of cast iron: Torsional strength: Impact properties: Fatigue resistance: Damping capacity: Coefficient of friction: Density of cast iron in the solid state: Density of molten iron and steel: Specific heat and total heat: Latent heat of fusion: Surface tension of cast iron: Viscosity of molten iron: Thermal conductivity: Thermal expansion: Electrical resistivity: Magnetic properties: Non-magnetic cast irons
- 3 General properties of commercial cast irons**  
Strength, composition and structure of grey cast irons: Low alloy cast irons: Malleable cast iron: Nodular cast iron: Austenitic cast iron: Acicular cast iron: Martensitic cast iron: White cast iron: High-silicon cast iron
- 4 Special properties affecting service**  
Heat resistance: Stress resistance at high temperatures: Low temperature properties: Wear resistance: Abrasive wear resistance and mechanical properties: The corrosion of cast iron: Protective surface coatings: Machinability: Surface finish
- 5 Heat treatment of grey cast iron**  
Heat treatment: Surface hardening: Flame hardening of malleable irons: Welding of cast iron: Soldering of cast iron

## CONTENTS

### **6 Internal casting stresses**

Cracking by residual casting stress: Camber in castings: Thermal stress cracking: Contraction allowance: Dimensional tolerances

### **7 Components with high local loadings** 413

Gears: Wheels and rollers: Furnace wheels and rollers at high temperatures: Flywheels: Die blocks for cold forming and hot forming: Interference and shrinkage fits

### **8 Cast iron beams and columns** 451

Beams; Columns: Pipes, cylinders and pressure vessels

### **9 Application of specifications and data to design**

Tensile strength: Modulus of elasticity: Machinability: Machinability and annealing: Hardness: Impact strength: Fatigue resistance: Wear and hardness: Corrosion and abrasion: Design stresses and factors of safety
